**CAUTION:** Before servicing this chassis, it is important that the service technician read the "Safety Precaution" and "Product Safety Notices" in this Service Manual.

## SPECIFICATIONS

ANTENNA INPUT IMPEDANCE .....	.75Ω	POWER INPUT .....	120 V, 60 Hz
CHANNEL CONVERGE RANGE		POWER RATING .....	69 W
VHF .....	2 ~ 13	CONVERGENCE .....	Self convergence
UHF .....	14 ~ 69	FOCUS .....	Electrostatic
CATV		PICTURE TUBE .....	A34JLN60X
MID BAND .....	A~1ch, A-5~A-1ch	SOUND OUTPUT .....	1W
SUPER BAND .....	J ~ Wch	SPEAKER .....	5 x 7 cm, 8Ω
HYPER BAND .....	W+1~W+28ch	DIMENSIONS (W) .....	37.0cm
ULTRA BAND .....	W+29~W+84ch	(H) .....	35.5cm
INTERMEDIATE FREQUENCIES		(D) .....	37.5cm
Picture I-F Carrier .....	45.75 MHz	WEIGHT .....	Appr. 10.5 kg
Sound I-F Carrier .....	41.25 MHz		
Sound I-F .....	4.5 MHz		

SPECIFICATIONS AND PARTS ARE SUBJECT TO CHANGE FOR IMPROVEMENT

**SOLID STATE COLOR TELEVISION**

JANUARY 1990

FUJIAN HITACHI TELEVISION CO., LTD.

**SAFETY PRECAUTIONS**

**NOTICE:** Comply with all cautions and safety related notes located on or inside the cabinet and on the chassis or picture tube.

**WARNING:** Since the chassis of this receiver is connected to one side of AC power supply during operation, whenever the receiver is plugged in, service should not be attempted by anyone unfamiliar with the precautions necessary when working on this type of receiver.

The following precautions should be observed:

1. Do not install, remove, or handle the picture tube in any manner unless shatterproof goggles are worn. People not so equipped should be kept away while picture tubes are handled. Keep picture tube away from the body while handling.
2. When service is required, an isolation transformer should be inserted between power line and the receiver before any service is performed on a "HOT" chassis receiver.
3. When replacing a chassis in the receiver, all the protective devices must be put back in place, such as barriers, non-metallic knobs, adjustment and compartment cover-shields, isolation resistor-capacitor, etc.
4. When service is required, observe the original lead dress. Extra precaution should be taken to assure correct lead dress in the high voltage circuitry area.
5. Always use the manufacturer's replacement components. Especially critical components as indicated on the circuit diagram should not be replaced by other manufacturer's. Furthermore where a short circuit has occurred, replace those components that indicate evidence of overheating.
6. Before returning a serviced receiver to the customer, the service technician must thoroughly test the unit to be certain that it is completely safe to operate without danger of electrical shock, and be sure that no protective device built into the receiver by the manufacturer has become defective, or inadvertently defeated during servicing.

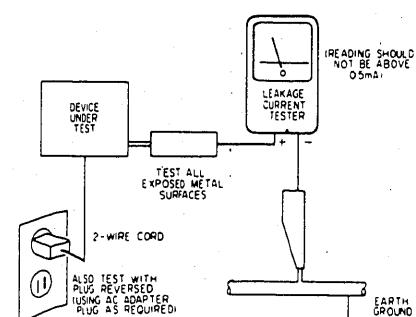

Therefore, the following checks should be performed for the continued protection of the customer and service technician.

**Leakage Current Cold Check**

With the AC plug removed from the 120V AC 60Hz source, place a jumper across the two plug prongs. Turn the AC power switch on. Using an insulation tester (DC500V), connect one lead to the jumpered AC plug and touch the other lead to each exposed metal part (antennas, screwheads, metal overlays, control shafts, etc.), particularly any exposed metal part having a return path to the chassis. Exposed metal parts having a return path to the chassis should have a minimum resistor reading of  $0.3M\Omega$  and a maximum resistor reading of  $5M\Omega$ . Any resistor value below or above this range indicates an abnormality which requires corrective action. Exposed metal parts not having a return path to the chassis will indicate an open circuit.

**Leakage Current Hot Check**

Plug the AC line cord directly into a 120V AC 60Hz outlet (do not use an isolation transformer for this check). Turn the AC power switch on. Using a "leakage Current Tester (Simpson Model 229 equivalent)", measure for current from all exposed metal parts of the cabinet (antennas, screwheads, metal overlays, control shaft, etc.), particularly any exposed metal part having a return path to the chassis, to a known earth ground (water pipe, conduit, etc.). Any current measured must not exceed  $0.5mA$ .

**AC Leakage Test**

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE RECEIVER TO THE CUSTOMER.

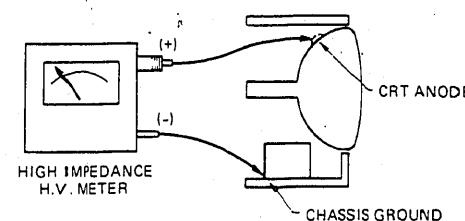

**High Voltage**

This receiver is provided with a hold down circuit for clearly indicating that voltage has increased in excess of a predetermined value. Comply with all notes described in this Service Manual regarding this hold down circuit when servicing, so that this hold down circuit may correctly be operated.

**Serviceman warning**

With minimum Black level and Picture, operating high voltage in this receiver is lower than 25.0KV. In case any component having influence on high voltage is replaced, confirm that high voltage with minimum Black level and Picture is lower than 25.0KV. To measure H.V. use a high impedance H.V. meter. Connect (-) to chassis earth and (+) to the CRT anode button. (See the following connection diagram).

**NOTE:** Turn power switch off without fail before the connection with Anode button is made.

**PRODUCT SAFETY NOTICE**

Many electrical and mechanical parts in HITACHI television receiver have special safety related characteristics. These are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special, safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a  $\Delta$  on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the HITACHI recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, X-radiation, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current HITACHI Service Manual. A subscription to, or additional copies of, HITACHI Service Manual may be obtained at a nominal charge from HITACHI SALES CORPORATION.

## TECHNICAL CAUTIONS

## OPERATION CHECK HOLD DOWN CIRCUIT

1. Connect a high voltage voltmeter between the CRT anode and the chassis ground as shown Fig. 1.
2. Set Brightness and Picture controls to Maximum.
3. Adjust Screen control, so that beam current become 0.75mA.
4. Set the AC input voltage to 100 volts, and short circuit both terminals of R907 as shown Fig. 2.
5. Increase the AC input voltage gradually and check that the picture disappears when the high voltage is less than 28.0 KV.
6. Turn the switch of the set OFF immediately after checking that the picture disappears.
7. Remove the adjusting jig and the voltmeter.

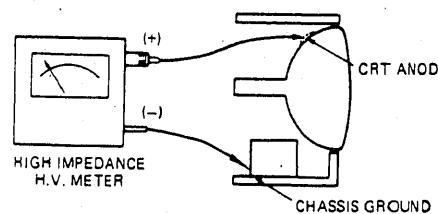

Fig. 1. Connection of H.V. Meter

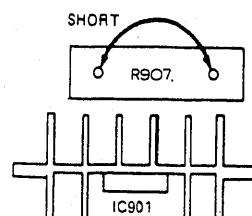

Fig. 2.

## OPERATING SUMMARY

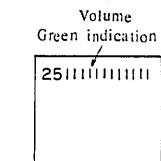

## HOW TO SELECT CHANNELS

## 1. TURNING THE SET ON - (POWER BUTTON)

Push the POWER BUTTON to turn the set ON. (To turn the set OFF, push the POWER BUTTON again.)

## 2. VOLUME CONTROL - (VOLUME BUTTON)

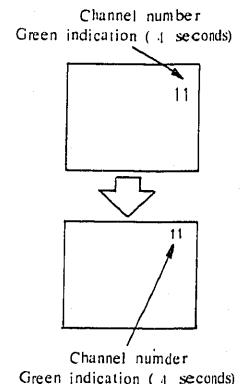

Push the right side ( $\Delta$ : UP) of the VOLUME BUTTON to make sound louder, and left side ( $\nabla$ : DOWN) of the VOLUME BUTTON to make sound softer. Variation of the volume is displayed at the upper part of the screen with a number from 0 ~ 63 and color bar.

## 3. BAND SELECTION - (BAND SELECTOR SWITCH)

The BAND SELECTOR SWITCH is installed at the back of the set. Your TV can receive 12 VHF channels, 56 UHF channels and 125 CATV channels. Choose the required reception band by sliding the BAND SELECTOR SWITCH. When shipped from the factory, this switch is set to the "NORM" position.

RECEPTION BAND	
NORM	CATV1 or CATV 2
VHF 2 ~ 13ch	VHF 2 ~ 13ch Mid band A ~ 1, A-5 ~ A-1 Super band J ~ W
UHF 14 ~ 60ch	Hyperband W+ 1 ~ W + 28 Ultra band W + 29 ~ W + 84

## 4. CHANNEL SELECTION - (CHANNEL BUTTON)

Channel selection may be performed by pressing either the CHANNEL BUTTON UP ( $\Delta$ ) or DOWN ( $\nabla$ ). When pressing the right side ( $\Delta$ : UP) of CHANNEL BUTTON, the next higher channel is selected. And when pressing the left side ( $\nabla$ : DOWN) of the CHANNEL BUTTON, the next lower channel is selected. The No. of the channel to which it is tuned is displayed at the upper right side of the screen. The channel No. selected is displayed for approx. 8 seconds after changing channels and disappears automatically. (The channel No. is indicated for 1 sec. in large letters, then indicated for 4 sec. in small letters, and then disappears.) (When you turn the set ON, the channel No. is displayed on the screen for approx. 15 seconds.)

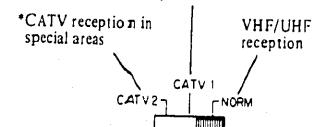

## CABLE ANTENNA (CATV) OPERATION

Your TV can receive Cable Antenna (CATV) system. (See the table "RECEPTION BAND".) To receive CATV channels, please operate as follows.

## 1. CATV ANTENNA CONNECTION

Connect your CATV cable to the antenna terminal board. (Refer to "ANTENNA CONNECTIONS" on page 4.)

Standard CATV reception

## 2. BAND SELECTION - (BAND SELECTOR SWITCH)

Set the BAND SELECTOR SWITCH on the back of the set to CATV 1 for normal CATV operation.

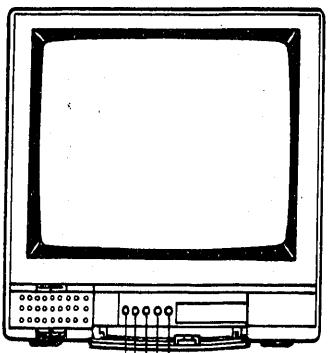

\*If reception of CATV Channel 5 and CATV Channel 6 is poor or not possible set the BAND SELECTOR SWITCH to CATV2.

## 3. CHANNEL SELECTION - (CHANNEL BUTTON)

CATV channel selection can be done with the CHANNEL BUTTON UP ( $\Delta$ ) or DOWN ( $\nabla$ ) as with VHF/UHF channels. When receiving CATV 2-13 channels, 2-13 is indicated on the screen. When receiving Mid band channels A-1, 14-22 is indicated, and when receiving Super band channels J-W, 23-36 is indicated. When receiving Hyper band channels W+ 1 ~ W + 28, 37 ~ 64 is indicated, when receiving Mid band channels A-5 ~ A-1, 95 ~ 99 is indicated, and when receiving Ultra band channels W + 29 ~ W + 58, W + 59 ~ W + 84, 85 ~ 91 and 100 ~ 125 is indicated.

Note: In some areas there is a special channel (4<sup>+</sup>) between channel 4 and channel 5; this can be received when the BAND SELECTOR SWITCH is set to "CATV 2" and channel No. 1 is selected.

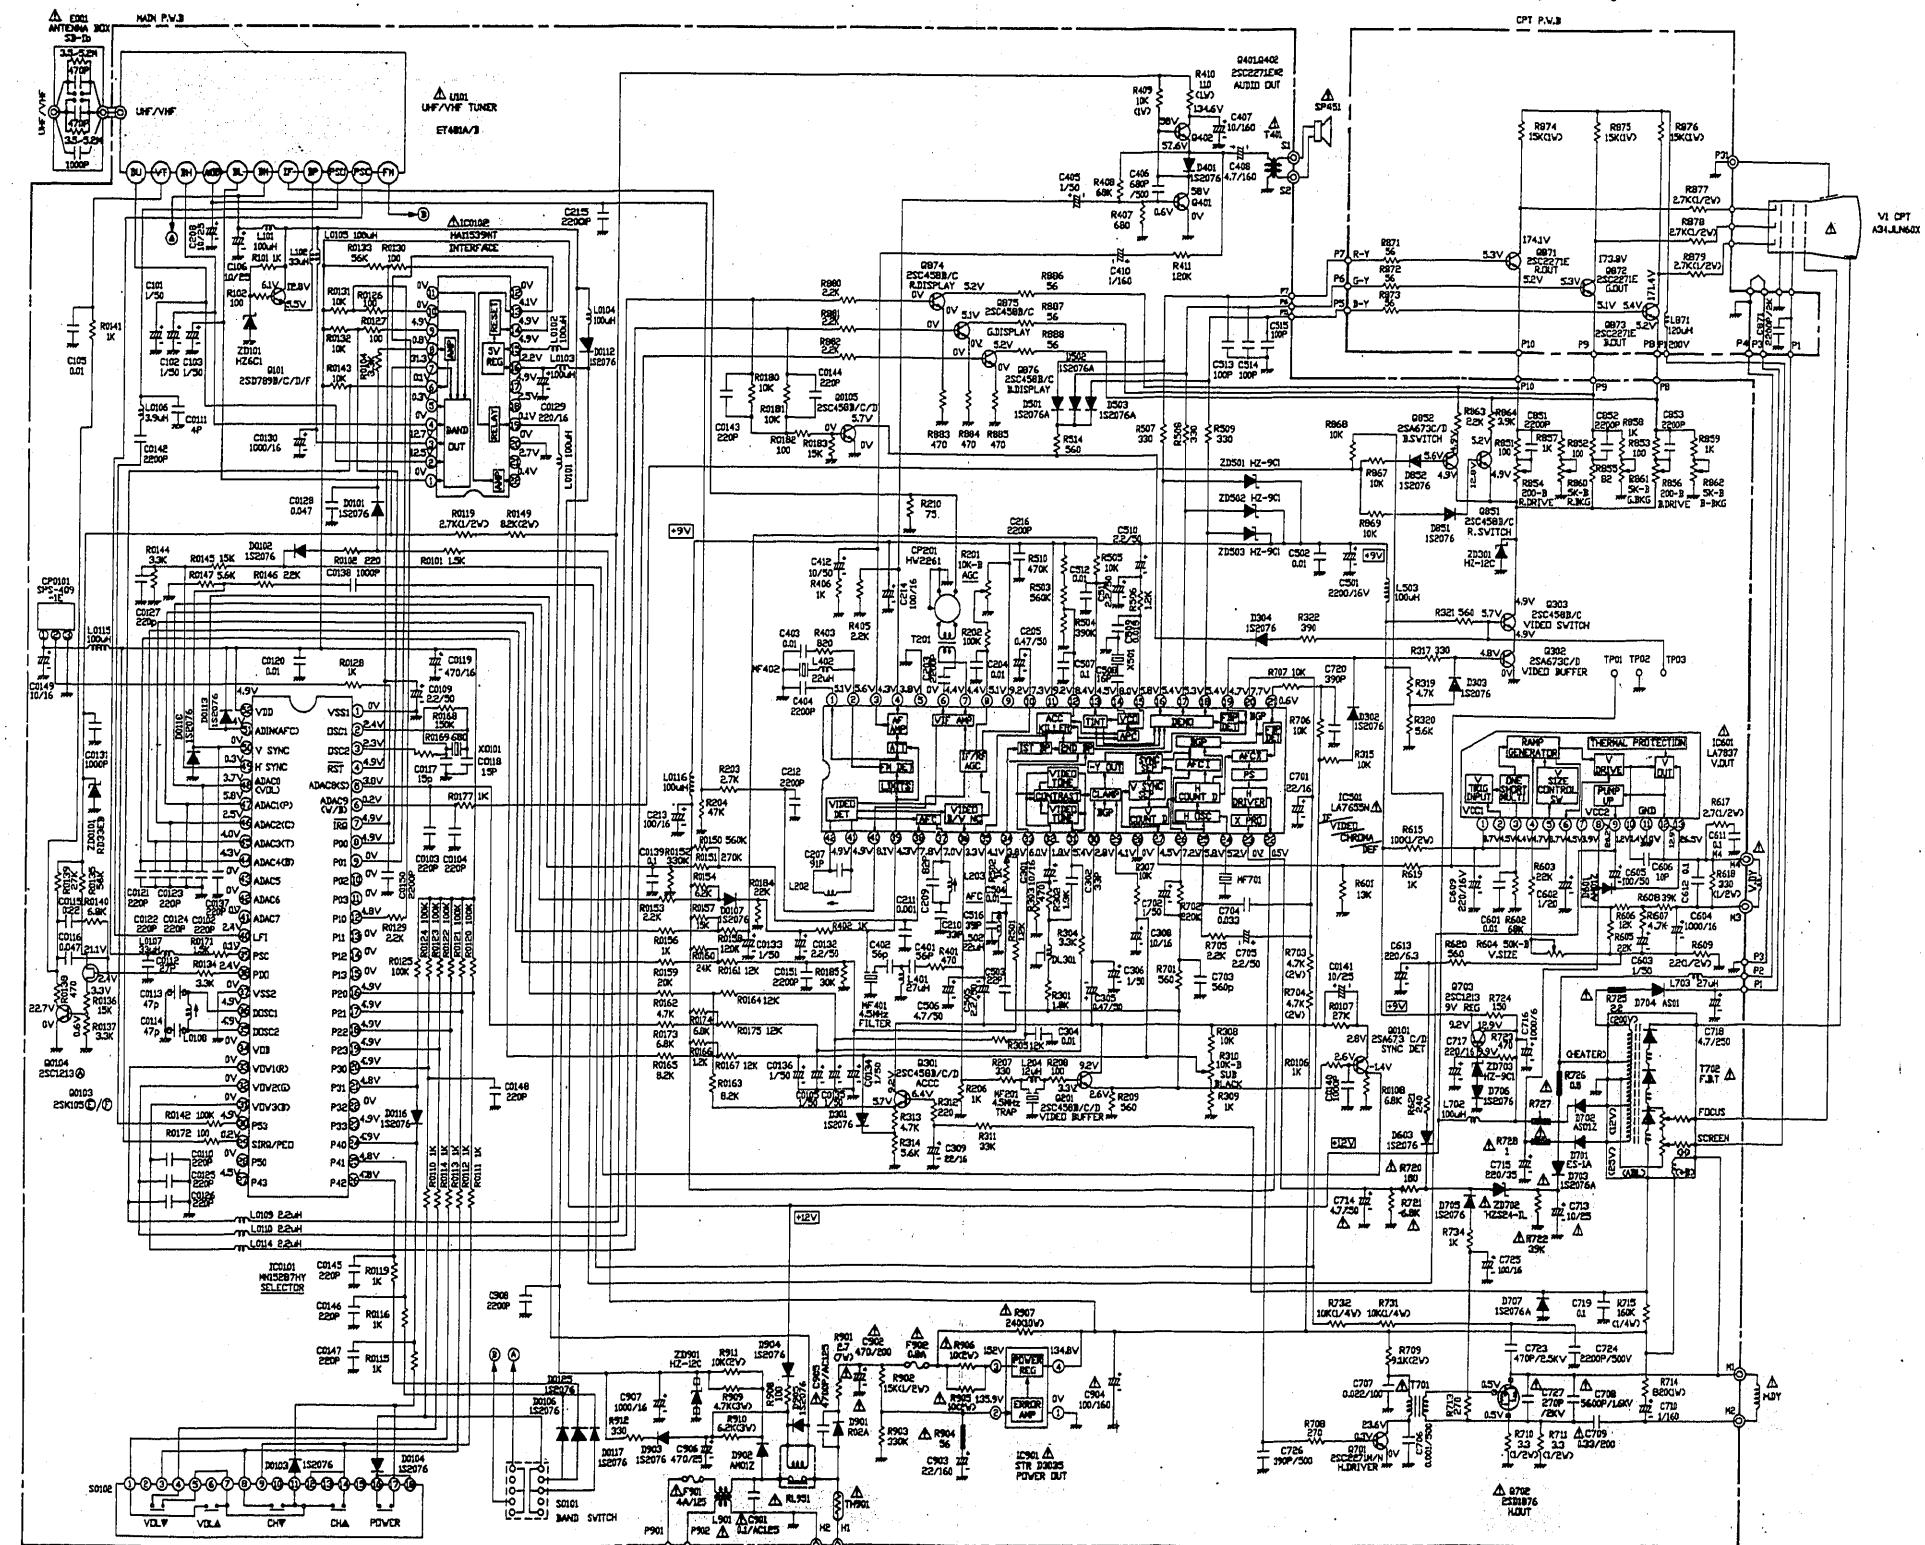

CONTROLS

- POWER BUTTON
- CHANNEL UP BUTTON
- CHANNEL DOWN BUTTON
- VOLUME UP BUTTON
- VOLUME DOWN BUTTON

## BASIC CIRCUIT DIAGRAM

**PRODUCT SAFETY NOTE** Components marked with a  $\Delta$  and shaded have special characteristics important to safety. Before replacing any of these components, read carefully the **PRODUCT SAFETY NOTICE** of this Service Manual. Don't degrade the safety of the receiver through improper servicing.

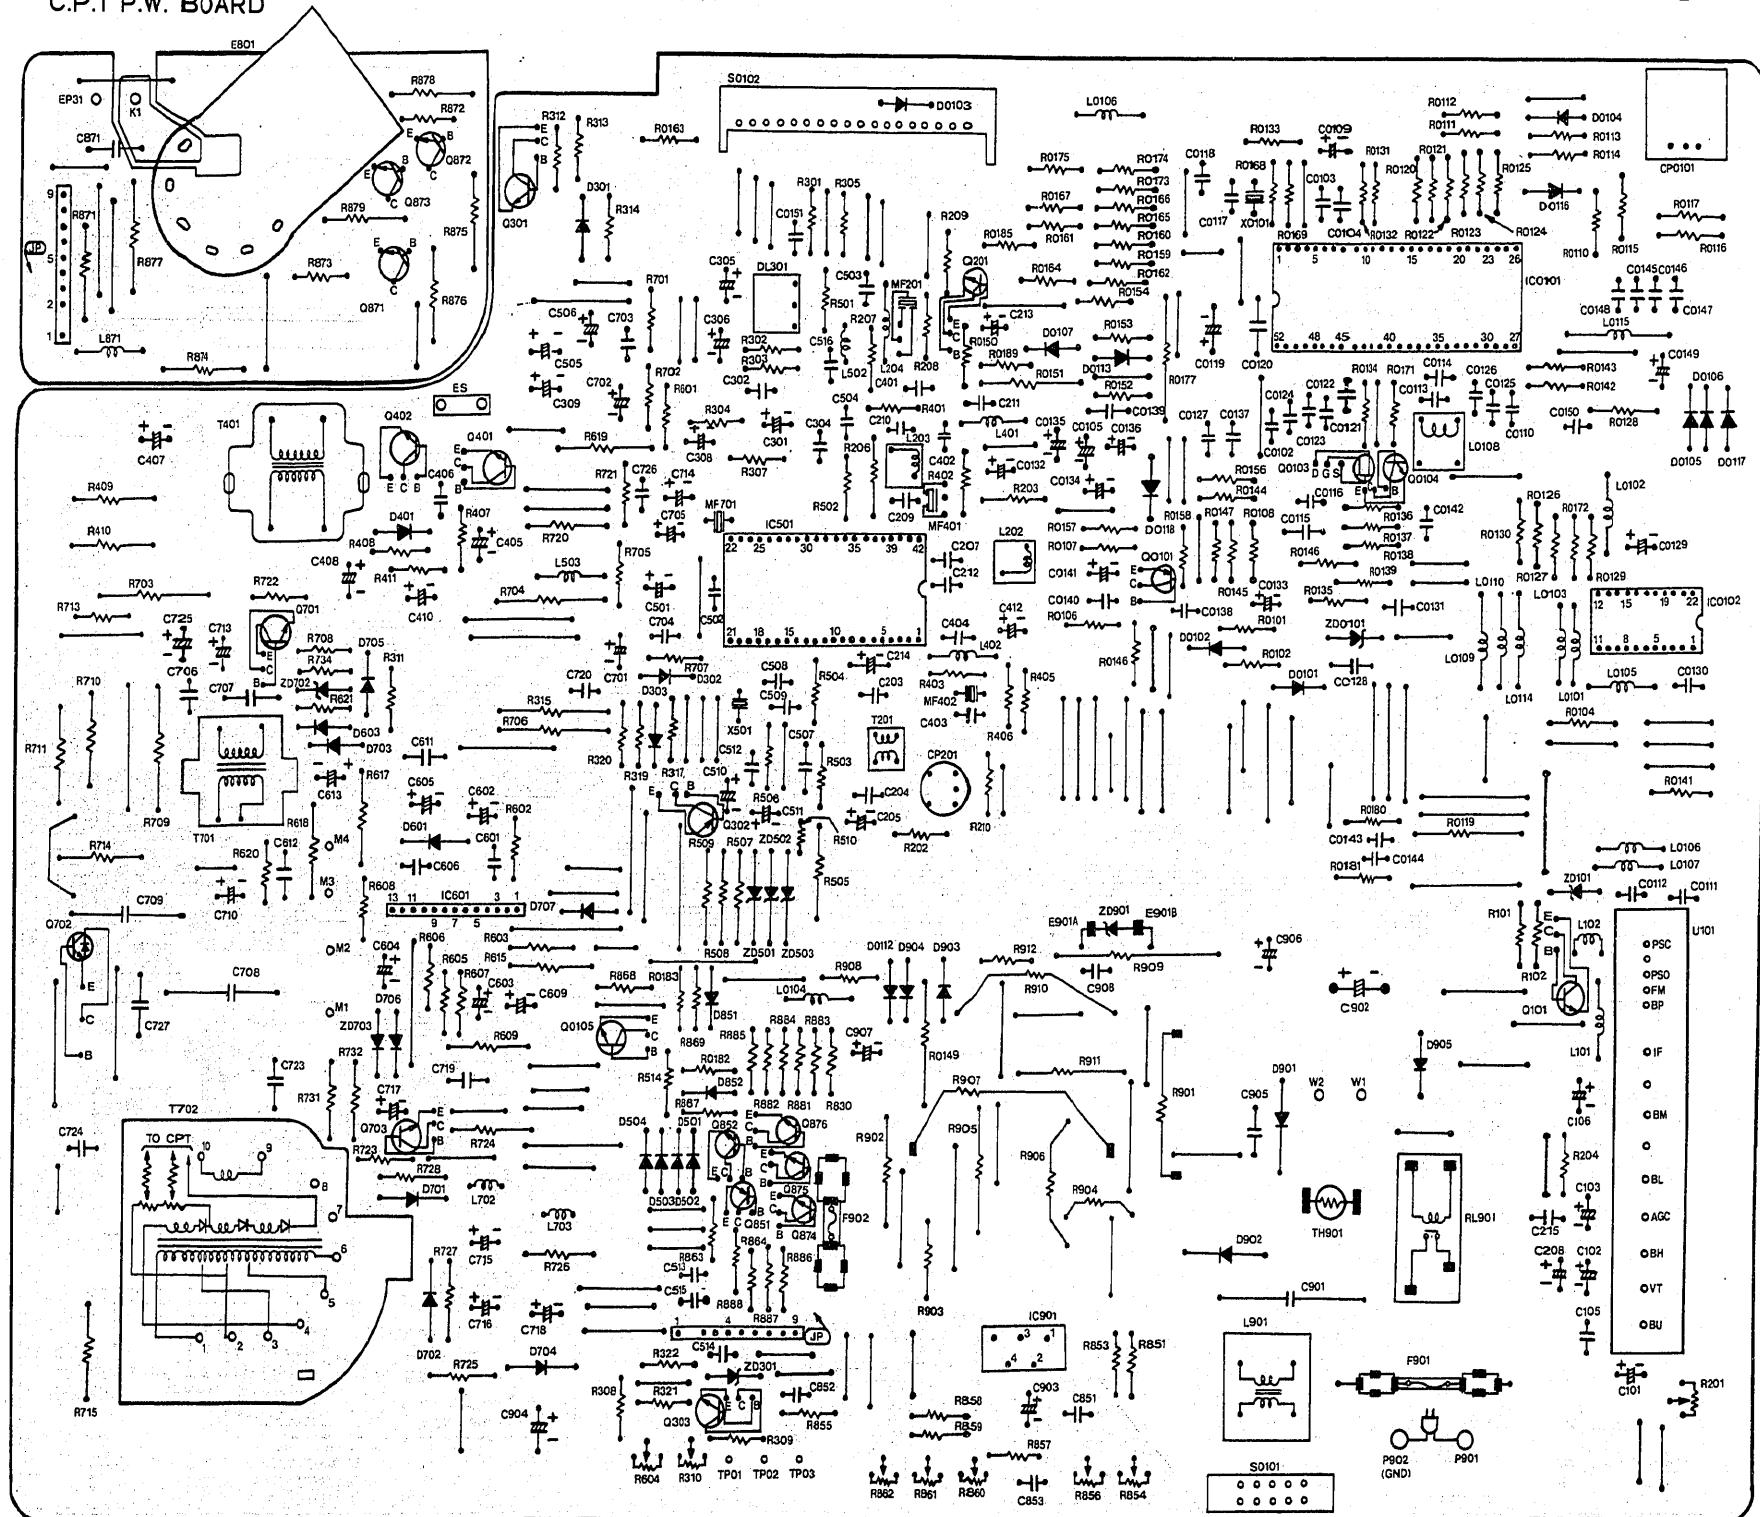

- Since this is a basic circuit diagram, the value of the parts is subject to be altered for improvement.
  - All DC voltage to be measured with a tester (100KΩ/V).

Voltage taken on a complex color bar signal including a standard color bar signal.
