## SPECIFICATIONS

### PS-626 PRO / PS-676 PRO

#### INPUTS:

DJ MIC ..... 1.5mV 2Kohm unbalanced  
 Phono ..... 3mV 47Kohm  
 Line ..... 150mV 27Kohm

#### OUTPUTS:

Amp / Booth ..... 0 dB 775mv 400ohm  
 Max ..... 24v Peak to Peak  
 Rec ..... 225mv 5Kohm

#### GENERAL:

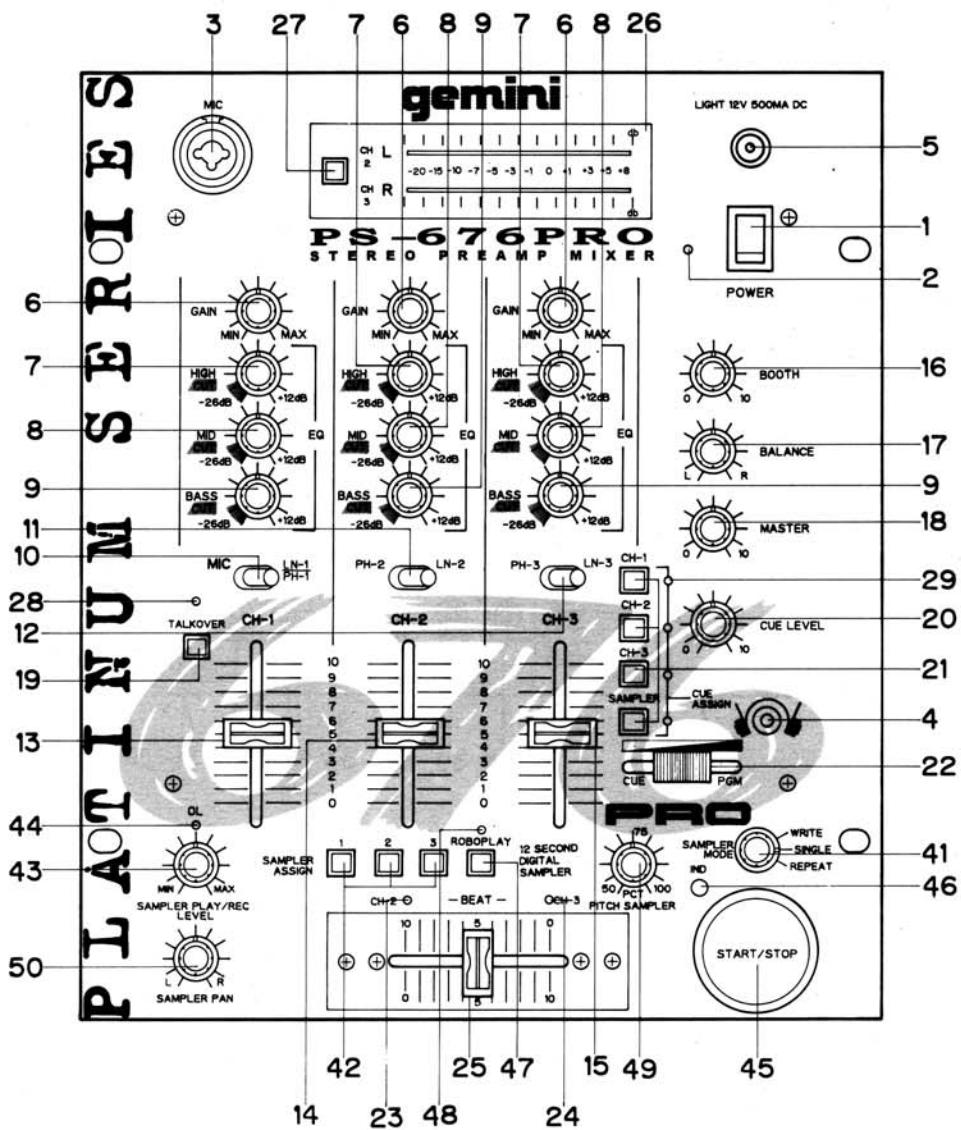

Bass ..... +12 / -26dB  
 Mid ..... +12 / -26dB  
 Treble ..... +12 / -26dB  
 Gain (Mic) ..... 0 to -40dB  
 Gain (Chnnels 1-3) ..... 0 to -20dB

Frequency Response ..... 20Hz -20KHz +/-2dB  
 Distortion ..... 0.02%  
 S/N Ratio ..... better than 80dB  
 Talkover Attenuation ..... -16dB  
 Headphone Impedance ..... 16ohm  
 Power Source ..... 115/230V 50/60Hz 15W  
 Dimensions ..... 254mmx305 mmx112mm  
 10"x12"x4 7/16"  
 Weight ..... 6.5lbs(3kg)

#### SAMPLER:(PS-676PRO ONLY)

Sampler System ..... 12 Bit Sampling  
 Maximum Sample Length ..... 12 Seconds  
 Total Memory Capacity ..... 12 Seconds

## CONNECTION, OPERATING AND SAMPLER INSTRUCTIONS

## INSTRUCTIONS FOR CONNECTION

- Before plugging in the power cord, make sure that the VOLTAGE SELECTOR (30) switch is set to the correct voltage.

**NOTE:**

This product is double insulated and not intended to be grounded.

- Make sure that the POWER (1) switch is in the off position. The POWER LED (2) will be off.

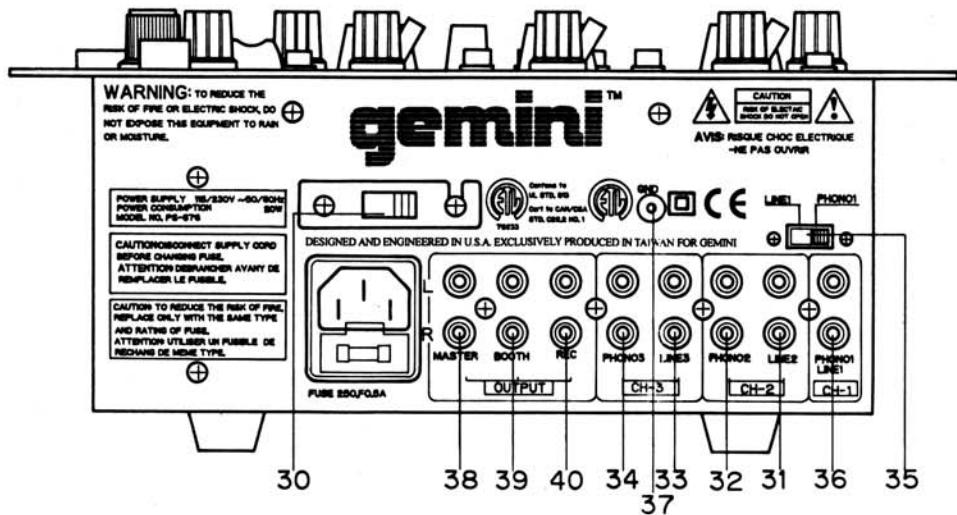

- The unit is supplied with 3 sets of output jacks. The OUTPUT AMP (38) jacks are used to connect to your main amplifier. The OUTPUT REC (40) jacks can be used to connect the mixer to record input of your recorder enabling you to record your mix. The OUTPUT BOOTH (39) jacks allow you to hook up an additional amplifier.

- The DJ MIC (3) input (found on the front panel) accepts a 1/4" or XLR connector and accepts only unbalanced microphones.

- On the rear panel are 2 stereo PHONO (32,34) inputs, 2 stereo LINE (31,33) inputs and 1 stereo PHONO / LINE (36) input. The PHONO / LINE (35) switch enables you to set the (36) input to Phono or Line. The phono inputs will accept only turntables with a magnetic cartridge. A GROUND (37) screw for you to ground your turntables is located on the rear panel. The stereo line inputs will accept any line level input such as a CD player, a cassette player, etc.

- Headphones can be plugged into the front panel mounted HEADPHONE (4) jack.

- The unit comes with a front panel BNC LIGHT (5) jack. This jack is for use with a gooseneck light like the Gemini GNL-700.

## SAMPLER OPERATION (PS-676 ONLY)

### SAMPLE RECORDING:

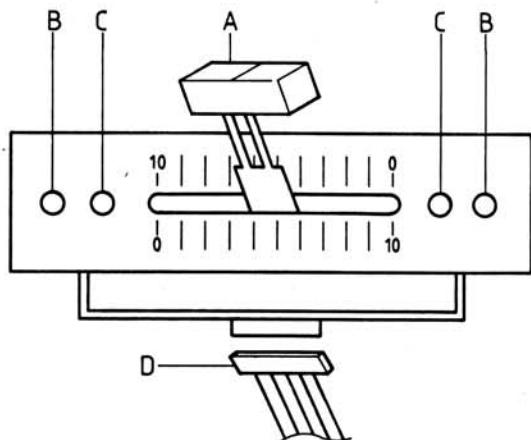

1. Put the MODE SELECTOR (41) switch into the WRITE position.
2. Select the source you want to sample from by pressing the appropriate ASSIGN BUTTON (42).
3. The PS-676 PRO is equipped with a SAMPLER REC / PLAY LEVEL (43) control. When the MODE SELECTOR (41) is in the WRITE mode, this control acts as a record level control. If the OVERLOAD INDICATOR (44) is blinking, it means that the input signal you are going to sample is too strong and will cause the sample to be distorted. Lower the sample signal intensity by turning the SAMPLER REC/PLAY LEVEL (43) control counter clockwise.
4. If the OVERLOAD INDICATOR (44) is off, turn the SAMPLER REC/PLAY LEVEL (43) control clockwise until the OVERLOAD INDICATOR (44) begins to blink and then turn the SAMPLER REC / PLAY LEVEL (43) counter clockwise until the OVERLOAD INDICATOR (44) just goes off.
5. Tapping the START / STOP (45) button begins the sampling process (the SAMPLER INDICATOR (46) will illuminate RED). Tapping the START / STOP (45) button a second time ends the sample (the SAMPLER INDICATOR (46) will turn off). If you do not tap the START / STOP (45) button a second time, the sampling process will stop automatically after 12 seconds.

### SAMPLE PLAYBACK:

1. Put the MODE SELECTOR (41) switch into the SINGLE or REPEAT position.
2. When MODE SELECTOR (41) is in the SINGLE or REPEAT mode, the SAMPLER REC / PLAY LEVEL (43) control acts as a Sampler Level Control.
3. Tapping the START / STOP(45) button with the MODE SELECTOR (41) in the SINGLE position will cause the sampler to playback one time (the SAMPLER INDICATOR (46) will illuminate GREEN). Every push of the START / STOP (45) button will restart the sample from the beginning. Rapid pressing of the START / STOP (45) button will cause a stuttering effect. Once the sample has started playback and the START / STOP (45) button is not pushed a second time, the sample will play to the end and then stop (the SAMPLER INDICATOR (46) will illuminate turn off).
4. Tapping the START / STOP (45) but-ton with the MODE SELECTOR (41) in the REPEAT position will cause the sample to continuously play over and over (the SAMPLER INDICATOR (46) will illuminate GREEN). The START / STOP (45) button will act as an on/off switch. The first push will start the sample, the second push will stop it.

## OPERATING INSTRUCTIONS

1. **POWER ON:** Once you have made all the equipment connections to your mixer, press the POWER SWITCH (1). The power will turn on and the POWER LED (2) will glow RED.
2. **CHANNEL 1:** The gain (6), TREBLE (7), MID (8), and BASS (9) controls allow you to fully adjust the selected source. Switch # (10) allows you to select either the mic or the PHONO / LINE (36) input. The CHANNEL (13) slide controls the output level of this channel.
3. **MAIN CHANNEL SECTION:** To assign an input source to a channel, first set the PHONO / LINE (11,12) switches to their appropriate positions. To make the proper adjustments to your music, set the GAIN (6), TRABLE (7), MID (8) and BASS (9) controls and position the CHANNEL (14,15) slide.
4. **CROSSFADE SECTION:** The CROSSFADE (25) allows the mixing of one source into another. The left side of the CROSSFADE (25) is channel 2 and the right side is channel 3. The CROSSFADE (25) in your unit is REMOVABLE and if the need arises can be easily replaced. There are two replacement crossfaders available from Gemini for the PS-626PRO / PS-676PRO Stereo Pre-Amp mixers. Part RF-45 (which is identical to the cross fader supplied with the unit) is available. Also available is part PSF 45 Professional Scratch Fader, a slight movement to the right or left completes a full crossfade.

1. Unscrew the outside FADER PLATE SCREW(B). Do not touch the INSIDE SCREWS(C).
2. Carefully lift the fader and unplug the CABLE(D).
3. Plug the new fader into cable and place it back in the mixer.
4. Screw the fader to the mixer.

5. **BEAT INDICATORS:** Each side of the CROSSFADE (25) has its own BEAT INDICATORS (23,24). They flash at the low frequency peak level allowing you to match the beats visually. BEAT INDICATORS (23) will reflect the beat of the left side of the CROSSFADE (25) and BEAT INDICATORS (24) will do the same for the right side.
6. **OUTPUT CONTROL SECTION:** The level of the AMP OUT (38) is controlled by the MASTER (18) control. The BALANCE (17) control will allow the Amp Out signal to be balanced between the left and right speakers. The BOOTH (16) control adjusts the level of the BOOTH OUTPUT (39).
- NOTE: The RECORD OUT (40) has no level control. The level is set by the channel slides and the gain controls of the selected channel. The tonal qualities are set by the bass, treble and mid control of that same channel.
7. **TALKOVER SELECTION:** The purpose of the talkover section is to allow the program playing to be muted so that the mic can be heard above the music. When the TALKOVER (19) button is pushed (the TALKOVER INDICTOR (28) will glow), the volume of all sources except the Mic or whatever is connected to the PHONO / LINE (36) input are reduced by -16 dB.

**8. CUE SECTION:** By connecting a set of headphones to the HEADPHONE (4) jack, you can monitor any or all of the channels. Select the correct CUE (21) button or buttons and their respective CUE LED (29) indicators will glow. Use the CUE LEVEL (20) control to adjust the headphone volume without effecting the overall mix. By sliding the CUE PGM PAN (22) control to the left you will be able to monitor the assigned cue signal. Sliding to the right will monitor the PGM (program) output.

**9. DISPLAY:** The peak hold, dual function DISPLAY (26) indicates either the MASTER (38) output left and right levels or the channel 2 and channel 3 levels. You can choose the option you want by pressing the DISPLAY (27) button.

**NOTE:** When the DISPLAY (27) is in the channel 2 / channel 3 display mode, by adjusting the individual channel gain and tone controls, you can increase or decrease the signal to match the other channel's signal. The channel slides and crossfader have no effect on the display readings.

## ROBO PLAY

1. With the ROBO PLAY (47) button in the OFF position (the ROBO PLAY INDICATION (48) will be OFF) and the MODE SELECTOR (41) switch in either the SINGLE or REPEAT mode, pressing the START / STOP (45) will cause the sample to play along with the signal going through the mixer.
2. When the ROBO PLAY (47) button is in the ON position (the ROBO PLAY INDICATOR (48) illuminates RED), starting the sampler mutes the signal going through the mixer. When the sample ends, the signal automatically turns back on.

## PITCH CONTROL

1. The PS-676 comes equipped with a sampler PITCH (49) control. To get a perfect sample, set the control to its center position and record the sample.
2. During playback, raising or lowering the control will raise or lower the pitch of the sample playback. The center position will remain as normal pitch.

### NOTE:

You can record a sample with the PITCH (49) control in any position. Whatever that position is will become normal sound. If you start to record a sample with the PITCH (49) control set at minimum (this now becomes your normal pitch), by increasing the pitch to maximum, the pitch effect will double in speed. Recording at maximum and lowering to minimum will do exactly the opposite.

## PAN CONTROL

1. Placing the PAN(50) control in the center position will cause the sample play back to evenly play through the left and right channels. Turning the PAN(50) control left or right will move the play back similar to a balance control.

## DISASSEMBLY PROCEDURES

### 1. Removal of Front Panel

- (a) Remove 20 knobs(A).(Fig.1)
- (b) Remove 5 knobs(B).(Fig.1)
- (c) Remove 4 screws(C).(Fig.1)
- (d) Remove 2 screws(D).(Fig.1)

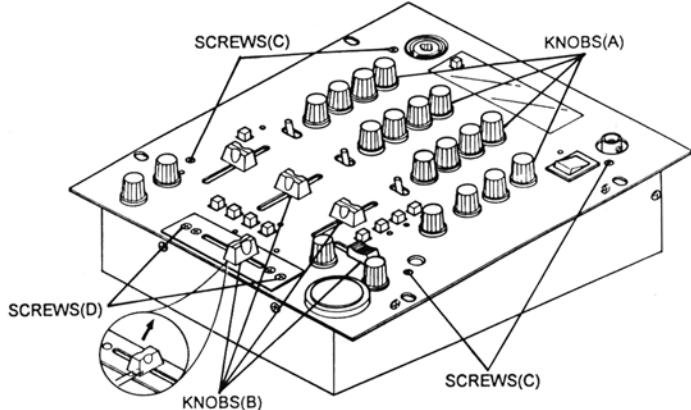

Fig. 1

### 2. Removal of Chassis and Top Cover

- (a) Remove 2 screws(E).(fig.2)
- (b) Remove 6 screw(F).(Fig.2)(Fig.3)
- (c) Remove 4 screws(G).(Fig.3)
- (d) Remove 20 nuts(H).(Fig.3)
- (e) Remove 16 screws(I).(Fig.4)
- (f) Remove 2 screws(J).(Fig.4)
- (g) Remove 6 screws(K).(Fig.4)
- (h) Remove 1 nut(L).(Fig.4)

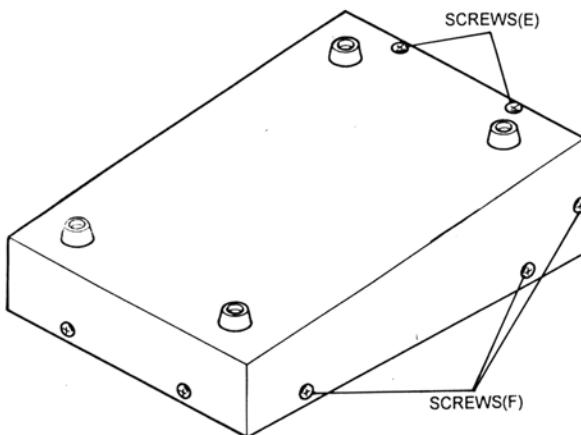

Fig. 2

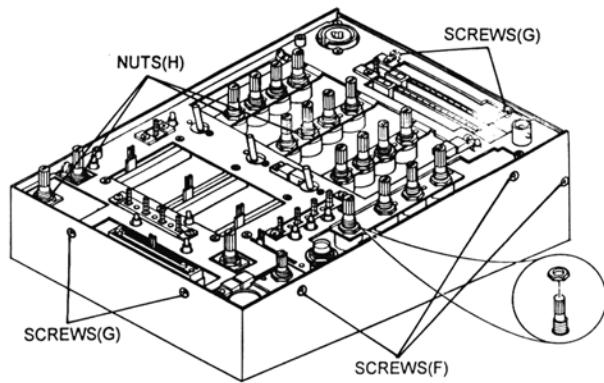

Fig. 3

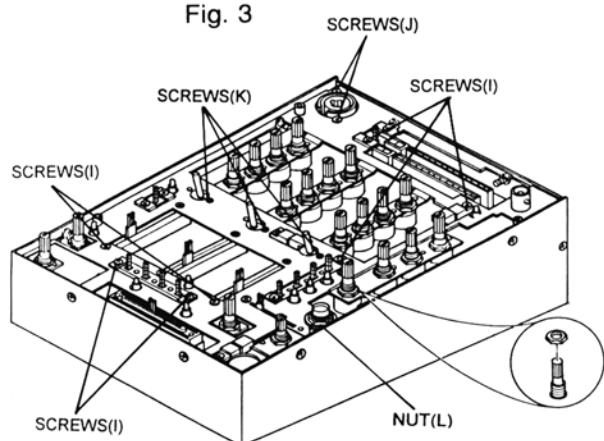

Fig. 4

### 3. Removal of Rear Panel and Other

- (a) Removal of Sample P.C.B.(Fig.5,PS-676 PRO Only)  
Press 3 supports(M).
- (b) Removal of IN / OUT P.C.B.(Fig.5)  
Remove 4 screws(N).
- (c) Removal of Transformer(Fig.5)  
Remove 2 screws(O).
- (d) Removal of Ligh / Phone(Fig.5)  
Remove 2 screws(P).
- (e) Removal of Voltage Selector(Fig.5)  
Remove 2 screws(Q).
