Specifications

| TV MODEL | TC-14B10P | TC-20B10P |
|---------------------------------------|----------------------------------------------------|----------------------------------------------------|
| Power Source | 110/220 V AC, 50/60 Hz automatic switch | 110/220 V AC, 50/60 Hz automatic switch |
| Power consumption, Max (A) | 80W | 90W |
| Antenna Input | 75Ω - VHF/UHF/CATV | 75Ω - VHF/UHF/CATV |
| Colour System | NTSC/AUTO/PAL-M/PAL-N | NTSC/AUTO/PAL-M/PAL-N |
| Tuning System | F.S.T | F.S.T |
| Channels Receiving | 2 to 13 (VHF) 14 to 69 (UHF) 1 to 125 (CATV) | 2 to 13 (VHF) 14 to 69 (UHF) 1 to 125 (CATV) |
| Picture Tube (Measured Diagonally) | 34 cm | 48 cm |
| Audio Output | 3W max (RMS) | 3W max (RMS) |
| AV Input | 1 (front) - 1 (rear) | 1 (front) - 1 (rear) |
| Dimensions (W x H x D) | 370 x 351 x 366 mm | 502 x 455 x 471 mm |
| Weight | 9,6 kg | 17 kg |

Remote Control Transmitter:

Power Source 3V (2 R6 batteries)
 Infrared Length 9500 Å (Angstrom)
 Number of Buttons 27 buttons
 Dimensions (W x H x D) (51 x 28 x 150) mm
 Weight 55g

Provided accessories

- 1 Remote Control Transmitter
- 1 Balun 300Ω / 75Ω (Balun)
- 2 R6 size batteries 1,5V (ABNT/IEC)
- 1 Internal antenna (only for 14" models)

Design and specifications are subject to change without notice

Panasonic®

Important Safety Notice

Special components are used in this television set which are important for safety. These parts are identified on the schematic diagram by the symbol \triangle . It is essential that these critical parts are replaced with the manufacturer's specified replacement parts to prevent X-ray radiation, shock, fire or other hazards. Do not modify the original design without manufacturer's permission.

General Guidelines

An Isolation Transformer should always be used during the servicing of a receiver whose chassis is not isolated from the AC power line. Use a transformer of adequate power rating as this protects the technician from accidents resulting in personal injury from electrical shocks. It will also protect the Receiver from being damaged by accidental shorting that may occur during servicing.

When servicing, observe the original lead dress, especially in the high voltage circuit. Replace all damaged parts (also parts that show signs of overheating.)

Always Replace Protective Devices, such as fishpaper, isolation resistors and capacitors, and shields after servicing the Receiver. Use only manufacturer's recommended rating for fuses, circuit breakers, etc.

High potentials are present when this Receiver is operating. Operation of the Receiver without the rear cover introduces danger from electrical shock. Servicing should not be performed by anyone who is not thoroughly familiar with the necessary precautions when servicing high-voltage equipment.

Extreme care should be practiced when Handling the Picture Tube. Rough handling may cause it to implode due to atmospheric pressure (14.7 lbs per sq. in). Do not sick or scratch the glass or subject it to any undue pressure. When handling, use safety goggles and heavy gloves for protection. Discharge the picture tube by shorting the anode to chassis ground (not to the cabinet or to other mounting hardware). When discharging, connect cold ground (i.e. dag ground lead) to the anode with a well insulated wire or use a grounding probe.

Avoid prolonged exposure at close range to unshielded areas of the picture tube to prevent exposure to X-ray radiation.

The Test Picture Tube used for servicing the chassis at the bench should incorporate safety glass and magnetic shielding. The safety glass provides shielding for the tube viewing area against X-ray radiation as well as implosion. The magnetic shield limits X-ray radiation around the bell of the picture tube in addition to restricting magnetic effects. When using a picture tube test jig for service, ensure that the jig is capable of handling 31kV without causing X-ray radiation.

Before returning a serviced receiver to the owner, the service technician must thoroughly test the unit to ensure that is completely safe to operate. Do not use a line isolation transformer when testing.

Warning !

It is essential that these critical parts are replaced with the manufacturer's specified replacement parts to prevent X-ray radiation, shock, fire or other hazards.

HOW TO OPEN THE CABINET

Location of Controls

Front Panel

Back Panel

Location of Controls

Remote Control Transmitter

NOTE:

This remote Control Transmitter use 2 "R6" size batteries.

TV Controls Operation

1 POWER Switch (ON/OFF)

Press the **POWER Switch** to turn on the TV. To turn it off press it again.

2 Function button (FUNC)

Press this button to access the adjust menu icons. Pressing this button the pre-adjust "**PRESET**" icon is selected.

Press successively the **FUNC** button to select one of the adjust functions: **AUTO SEARCH**, **COLOUR SYS**, **SKIP** and **ANTENNA** as shown left.

To exit the pre-adjust "**PRESET**" icon, press the **FUNC** button successively.

(See details on the "**PRESET**" icon item).

3 TV/AV selection button

Press the **TV/AV** selection button to select the **TV** or **AV** mode.

4 VOLUME up (+)/down (-) buttons

Press this buttons to adjust the sound level.

5 Programme Number up (^)/down (v) buttons

Press this buttons to select channels.

Remote Control Transmitter Operation

1 POWER SWITCH (On/Off) (Stand-by)

Press this button to stand-by condition (The TV power switch must be switched **On**). Press it again to turn **On**. It is possible to turn the TV set on by pushing the **Direct Programme Number Selection** or the **Programme Number Up and Down** button.

Notes:

- Leave the TV set on stand-by condition do not cause damages and the energy consumption is minimum.
- It's recommended periodically turn the TV **POWER SWITCH** off to activate the Image tube demagnetization circuit.
- It's recommended turn the TV Off using the **POWER SWITCH** and remove the plug from the wall outlet when the TV set will be alone for a long period of time.

2 VOLUME buttons (+, -)

Press this buttons to adjust the sound level.

Remote Control Transmitter Operation

3 Direct Programme Number Selection Buttons

Press this buttons to select the desired channels.
To two or three digits channels press the numbers in the sequence.

e.g.: channel 13 press 1 and 3.
channel 113 press 1, 1 and 3 (to cable TV).

4 RECALL button

Press this button to verify the channel number and the TV time to turn off when this function is activate by the **TIMER** button, as shown left.

5 TIMER button

This TV is able to be setting to turn off after a certain period of time.
Pressing the **TIMER** button you are able to select 30, 60 or 90 minutes.

At the last 3 minutes, before the TV turns off, the time indication will blink.

Note:

Selecting the **AUTO mode**, the TV activate the stand-by condition 5 minutes after the end of the transmission by the TV station.
AUTO mode does not operate on **AV mode**.

How to cancel the TIMER

Adjust the time for "0" pressing the **TIMER** button or turn off the TV.

6 Position Buttons

Remote Control Transmitter Operation

7 MAIN MENU Selection

Press this button to access the **ICONS MENU** on the TV screen.

8 Programme Number Up and Down buttons

Press this buttons to select channels up or down.

9 TV/AV selection button

Press this button to select **TV** or **AV** mode.

10 MUTE button

Press this button to interrupt the sound momentarily.
The "X" red icon appears.
To cancel this function press the button again.

11 PIC MENU button (Image menu)

Press the **PIC MENU** button to select sequentially the picture menus as shown:

On screen Function

DYNAMIC For watching in brighter environments.
This menu selects a higher than normal level of bright and contrast.

STANDARD For watching in normal (evening) environments.
This menu selects normal level of bright and contrast.

SOFT For watching in dark environments.
This menu selects reduced level of bright and contrast.

GAME This menu regulates appropriate bright and contrast levels for video games.

12 "N" button (Normalization)

Press this button to adjust the **COLOUR**, **NTSC-TINT**, **BRIGHT**, **CONTRAST**, **SHARPNESS**, **COLOUR TEMP.** and **TONE** to the factory preset levels.

Main Menu

When pressed, **MAIN MENU** button open on TV screen the menu icon, allowing access to the adjust Icons: **PICTURE**, **SOUND**, **FEATURES**, **LANGUAGE** and **PRESET**.

Diagram of the Main Menu structure showing the following options:

- PICTURE**
 - DYNAMIC
 - 32 COLOUR
 - 32 NTSC-TINT
 - 32 BRIGHT
 - 32 CONTRAST
 - 32 SHARPNESS
 - STD COLOUR TEMP.
- SOUND**
 - 4 32 TONE
- FEATURES**
 - BLUE BACK ON/OFF
 - CHILD LOCK ON/OFF
 - DIOMA EM PORTUGUES
 - DIOMA EM ESPANOL
 - LANGUAGE IN ENGLISH
 - AUTO SEARCH
 - COLOUR SYS SKP
 - ANTENNA
 - AUTO OFF
 - TV
- LANGUAGE**
 - DIOMA EM PORTUGUES
 - DIOMA EM ESPANOL
 - LANGUAGE IN ENGLISH
- PRESET**
 - AUTO SEARCH
 - COLOUR SYS SKP
 - ANTENNA
 - AUTO OFF
 - TV

Note: On AV mode access only the "BLUE BACK" function.

Note: On AV mode access only the "COLOUR SYS" function.

Image Icon Operation

Note: When the "N" (Normal) button is pressed on the remote control while the Image Menu is displayed, the function setting will reset to the factory preset level.

| PRESS | ITEM | EFFECT | On screen indication |
|-------|---------------------------|------------------|----------------------|
| ▼ ▲ | COLOUR | Less More | 32 COLOUR |
| ▼ ▲ | NTSC-TINT (only for NTSC) | Greenish Reddish | 32 NTSC-TINT |
| ▼ ▲ | BRIGHT | Darker Brighter | 32 BRIGHT |
| ▼ ▲ | CONTRAST | Less More | 32 CONTRAST |
| ▼ ▲ | SHARPNESS | Less More | 32 SHARPNESS |
| ▼ ▲ | COLOUR TEMP. | Less More | WARM or STD |

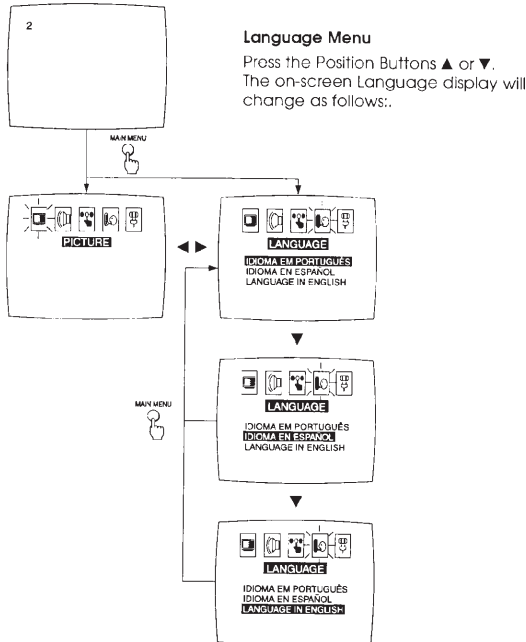

Sound Icon Operation

| PRESS | ITEM | EFFECT | On Screen Indication |
|-------|------|-----------|----------------------|
| ▼ ▲ | TONE | Less More | 4 32 TONE |

Note: By pushing the "N" (Normal) button on the Remote control while the sound icon is displayed, the setting of the selected function will return to factory setting.

Language Icon Operation

Preset Icon Operation

The preset items are able to be operated from the Remote Control as well from the TV set.

AUTO SEARCH mode

By TV set

- 1 Press the **FUNC** button. The "AUTO SEARCH" function will be pre-selected.
- 2 Press the **VOLUME (+)** button. Search will start automatically.
- 3 Conclude pressing **FUNC** button 4 times.

By Remote Control Transmitter

- 1 Press the **MAIN MENU** button and select "PRESET" pressing Position Buttons ▲ or ▼.
- 2 Select "AUTO SEARCH", pressing the Position Button ▼.
- 3 To activate automatic search, press the Position Button ►. Search will start automatically.
- 4 Conclude pressing **MAIN MENU** button 2 times.

Colour System mode (NTSC/AUTO/PAL-M/PAL-N)

To select the colour system **NTSC/AUTO/PAL-M** or **PAL-N** (automatic identification of colour system), follow this steps:

By TV set

- 1 Press the **FUNC** button till locate "COLOUR SYS" function.
- 2 Select the colour system **NTSC/AUTO/PAL-M** or **PAL-N**, by pressing the **VOLUME (+)** button.
- 3 Conclude pressing **FUNC** button 3 times.

By Remote Control Transmitter

- 1 Press the **MAIN MENU** button and select "PRESET" using the Position Buttons ▲ or ▼.
- 2 Select the "COLOUR SYS" function by the Position Button ▼.
- 3 By the Position Buttons ▲ or ► select the desired colour system, **NTSC/AUTO/PAL-M** or **PAL-N**.
- 4 Conclude pressing **MAIN MENU** button 2 times.

Preset Icon Operation

Skip Channel mode

By TV set

- 1 Press the **FUNC** button till locate the "SKIP" function. Select the channel to be skipped using the **Programme Number Buttons**.
- 2 By **VOLUME (+)** button locate **ON** mode.
- 3 Conclude pressing **FUNC** button 2 times.

By Remote Control Transmitter

- 1 Press the **MAIN MENU** button and select "PRESET" using the Position Buttons ▲ or ▼.
- 2 Select the channel to be skipped by pressing **Programme Number Buttons** or **Direct Programme Number Selection Buttons**.
- 3 Select "SKIP" function pressing Position Button ▼.
- 4 Using the Position Buttons ▲ or ►, select the **ON** mode.
- 5 Conclude pressing **MAIN MENU** button 2 times.

Note:

The channels that are select "SKIP" function **ON** mode will not be accessed by the **Programme Number Up and Down Buttons**.

To Cancel the Skip Channel Function

By TV set

- 1 To insert a channel number press the **FUNC** button till locate on "SKIP" and select the channel that you want by the **Programme Number Up and Down Buttons**.
- 2 Use **VOLUME (+)** button to select "OFF".
- 3 Conclude pressing **FUNC** button 2 times.

By Remote Control Transmitter

- 1 Press the **MAIN MENU** button and use Position Buttons ▲ or ▼ to select "PRESET".
- 2 Select the skipped Programme Number, by pressing the **Programme Number Up and Down Buttons** or **Direct Programme Number Selection Buttons**.
- 3 Select the "SKIP" function, by pressing Position Button ▼.
- 4 By the Position Buttons ▲ or ►, select "OFF".
- 5 Conclude pressing **MAIN MENU** button 2 times.

Preset Icon Operation

Antenna mode

Before start the channels search, select the "ANTENNA" function and choose the **TV** or **CABLE** mode as the available TV signal of the place.

TV - Channels tune VHF/UHF (2 ~ 69)
CABLE - Cable channels tune (1 ~ 125).

Note:

The TV sets are factory adjusted on TV mode.

By TV set

- 1 Press the **FUNC** button until "ANTENNA" function is selected.
- 2 By the **VOLUME (+)** button select the **TV** or **CABLE** mode, as the available TV signal of the place.
- 3 Conclude pressing **FUNC** button.

By Remote Control Transmitter

- 1 Press the **MAIN MENU** button and select "PRESET" by the Position Buttons ▲ or ▼.
- 2 Select the "ANTENNA" function by the Position Button ▼.
- 3 by the Position Buttons ▲ or ►, select the **TV** or **CABLE** mode.
- 4 Conclude pressing **MAIN MENU** button 2 times.

HOTEL MODE

This function is useful to Hotels or when the user don't want other people change the TV set adjustments.

Setting the Hotel Mode "modo HOTEL", only **VOL+**, **VOL-**, **CH+**, **CH-**, **PIC MENU**, **RECALL**, **MUTE**, **TV/AV** and **numeric buttons** functions can be used, and the other functions are blocked: **MAIN MENU**, **TIMER** and **FUNC**. Adjusting the **VOLUME** by the **VOL+** function the sound level increases until the level that it was adjusted before activate the Hotel Mode "modo HOTEL".

To activate the Hotel Mode "modo HOTEL"

- 1 Set the sound level as you wish.
- 2 By pressing **TIMER** button select 30 minutes time.
- 3 Press the remote control **RECALL** button pointing directly to TV set and hold.
- 4 Press the **Programme Number Buttons "X"** on the TV set panel.

To exit Hotel Mode "modo HOTEL"

Press the **VOL-** button on the TV set panel simultaneously press **TIMER** button on the Remote Control Transmitter.

HOW TO OPERATE THE DAC CONTROL MX5Y FUNCTIONS ADJUSTMENTS

1- SERVICEMAN MODE

1.1- TO ENTER "CHQ" MODE (SERVICE):

Set the **OFF TIMER** to 30 using the remote control and adjust minimum volume at the TV panel. Press simultaneously **"RECALL"** at the remote control and **VOL(-)** at the tv panel. The white screen will appear on receiver. Press **"RECALL"** again and the letters **"CHQ"** will appear magenta with a blue background.

- 1.2- To alternate between "CHQ" modes, press "1" or "2" at the remote control (CHQ1 to CHQ5)

1.3- TO EXIT "CHQ" MODE (SERVICE):

Press "N" at the remote control, or just turn off the TV using the remote control.

CHQ1

- 1.1- Press "3" or "4" to alternate the existing options: from OP1 to OP6.
 1.2- To change the data inside each sub-item press VOL(+) or VOL(-) (the letter will be red). To memorize the modifications press "0" (the letter will come back to green).

OP1 (Colour system)

This option alternates between colour systems that will be available within the TV set.

OP1=0 auto/PAL-M/NTSC (mod. Binorma)
 OP2=1 auto/PAL-M/PAL-N/NTSC (mod. Trinorma)
 OP1=2 Pal-M (mod. Pal-M)

OP2 (Game Function)

This option may turn the function **GAME** on/off.

OP3 (PANASONIC DEMO)

This option may turn the function **DEMO** on/off.

OP4 (TELE-TEXT) - *not available*

This option may turn the function **TELE-TEXT** on/off.

OP5 (SASO) - *not available*

This option may turn the function **SASO** on/off.

OP6 (NOISE MUTE) - *not available*

This operation may turn the function **NOISE MUTE** on/off. Without the blue screen, it cuts off the noise when you are working on a channel without reception or very weak signal.

CHQ2

- 1.1- Press "3" or "4" to alternate between existing positions like the sequence below:
 To change between the data of each sub-item press VOL(+) or VOL(-), the letter will stay green. No need to memorize.

COLOURUSER
 SUB-COLOURCALIBRATION
 TINT USER
 SUB-TINTCALIBRATION
 BRIGHT USER
 SUB-BRIGHT CALIBRATION
 CONTRAST USER
 SUB-CONTRAST CALIBRATION
 PURITYUSER
 SUB-PURITY CALIBRATION

CHQ3

- 1.1- Press "3" or "4" to alternate between the existing options, as sequence below:
 To change between the data in each sub-item press VOL(+) or VOL(-), the letter will stay green. No need to memorize.
 HC HORIZONTAL CENTERING
 VC VERTICAL CENTERING
 V ALT VERTICAL HEIGHT

CHQ4

- 1.1- Press "3" or "4" to alternate between the existing options, as sequence below:
 To change between the data in each sub-item press VOL(+) or VOL(-), the letter will stay green. No need to memorize.
 AFT AFT CALIBRATION
 VID..... VIDEO LEVEL CALIBRATION
 RF.....AGC-RF CALIBRATION

CHQ5

- 1.1- Press "3" or "4" to alternate between the existing options, as sequence below:
 To change between the data in each sub-item press VOL(+) or VOL(-), the letter will stay green. No need to memorize.

CHQ5 – Options:

B-CUT.....BLUE LOW LIGHT CALIBRATION
 G-CUT..... GREEN LOW LIGHT CALIBRATION
 R-CUT.....RED LOW LIGHT CALIBRATION
 B-DR..... BLUE HIGHT LIGHT CALIBRATION
 R-DR..... RED HIGH LIGHT CALIBRATION
 SUB-BR..... SUB BRIGHT CALIBRATION
 BRIGHT..... BRIGHT CALIBRATION

- 1.2- Press "5" at the remote control to make appear a white line for screen calibration. In order to make the line disappear press "5" again.

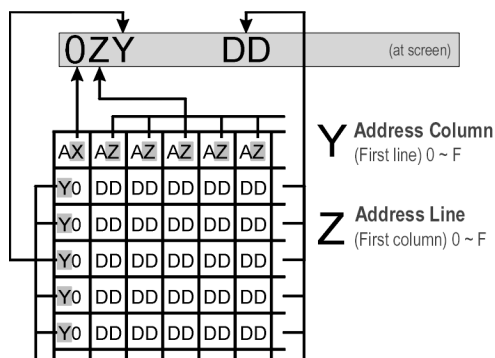

DAC DIRECT TABLE

| CHQ1 | CHQ2 | CHQ3 | CHQ4 | CHQ5 |
|------|--------------|-------|------|--------|
| OP1 | SUB-COR | HC | AFT | B-CUT |
| OP2 | COR | VC | VID | G-CUT |
| OP3 | SUB-NITIDEZ | V ALT | RF | R-CUT |
| OP4 | NITIDEZ | --- | --- | B-DR |
| OP5 | SUB-CONTRAST | --- | --- | R-DR |
| OP6 | CONTRAST | --- | --- | SUB BR |
| --- | SUB-BRIGHT | --- | --- | BRIGHT |
| --- | BRIGHT | --- | --- | --- |
| --- | SUB-MATIZ | --- | --- | --- |
| --- | MATIZ | --- | --- | --- |

MEMORY - DIRECT ACCESS METHOD

- 1.1- To obtain direct access to memory go to item **CHQ1**, press simultaneously VOL(-) at the TV set and "mute" at the remote control.
- 1.2- To alternate between memory positions press "3" or "4".
- 1.3- To change the contents of each memory positions press VOL(+) or VOL(-), the letter will remain red. To memorize the changes press "0", the letter will go back to white.
- 1.4- To exit memory press "1" or "2" to alternate between the CHQ's or press "N" to exit "SERVICE MODE".

ELECTRICAL INSPECTION

1- EQUIPMENTS REQUIRED

- 1.1- High voltage meter, range to 30kv (eletrostatic or resistive)
- 1.2- Voltmeter, range 30VDC, 150 VDC and 300VAC
- 1.3- Voltmeter RMS
- 1.4- DY,CY,CRT

2- PREPARATION

- 2.1- Position controls on the following positions:
 NORMAL IMAGE.....ADJUSTED
 VOLUME..... MINIMUM
 TV/VIDEO..... TV
 POT SCREEN.....CENTER
 POT FOCUS.....BEST POINT (VISUAL)

3- VOLTAGE INSPECTION

- 3.1- Adjust AC input voltage to 110V.
- 3.2- Turn on the S801 switch.
- 3.3- Apply a CROSS HATCH pattern.
- 3.4- Adjust controls "SUB BRIGHT" (SUB BR) in CHQ5 and SCREEN to obtain **corrente de feixe zero**.
- 3.5- Verify the voltage on the points below:

| VOLTAGE | TEST POINT | METER |
|---------------------|--------------|--------|
| 90V ± 2,0V | C823 (+) | 300V |
| 190V ± 15V | E33 - PIN 1 | 300V |
| 22V ± 2,0V | D850 (K) | 30V |
| 44V ± 2,5V | D852 (K) | 50V |
| 9V ± 1V | TPE9 | 30V |
| 5V ± 1V | TPE10 | 30V |
| 6,3 VRMS ± 0,24V | Y33 - PIN 4 | 30VRMS |
| For 14" models only | | |
| 180V ± 15V | E33 - PINO 1 | 300V |

- 3.6- Position SCREEN and SUB BRIGHT (SUB BR) to a level where image is visible.

INSPECTION OF THE DEFLECTION CIRCUITS AND PRE-ADJUSTMENTS

1- REQUIRED EQUIPMENTS.

- 1.1- High voltage meter, range up to 30Kv (eletrostatic or resitor).

2- PROCEDURES.

- 2.1- Apply a PHILIPS pattern.
- 2.2- Select VERTICAL HEIGHT (V ALT) in CHQ3.
- 2.3- Adjust the heigth to obtain a correct image.
- 2.4- Apply a CROSS HATCH pattern.
- 2.5- Adjust BRIGHT, SUB BR, in CHQ5, SCREEN minimum to obtain current=0
- 2.6- Measure high voltage with the voltmeter and verify if is within the limits below:

| METER | 20 INCHES | 14 INCHES |
|---------------|--------------------|--------------------|
| ELETROSTÁTICO | 26,5 + 1,0 – 1,5KV | 24,5 + 1,0 – 1,5KV |
| RESISTIVO | 26,0 + 1,0 – 1,5KV | 24,0 + 1,0 – 1,5KV |

- 2.7- Apply a PHILIPS pattern.
- 2.8- Adjust BRIGHT, SUB BR, in CHQ5, SCREEN to obtain normal image.
- 2.9- Check if horizontal width is normal
- 2.10- Select SUB BR in CHQ5 and check if BRIGHT is controlled by varying SUB BR in CHQ5.
- 2.11- Select HORIZONTAL CENTERING (HC) in CHQ3 (Service Mode) and adjust convergence.
- 2.12- Select VERTICAL CENTERING (VC) in CHQ3 (Service Mode) and adjust convergence.

3- PRÉ AJUSTE DO AGC RF.

- 3.1- Apply a PHILIPS pattern.
- 3.2- Adjust the signal level to $65 \pm 2\text{dB}$ (75Ω open).
- 3.3- Select **RF AGC** in **CHQ4** Service Mode and increase it pressing **VOL(+)**. Verify if "snow" appear when the RF AGC register is increased. Then decrease it slowly by using **VOL(-)** until the "snow" has disappeared.

CUT OFF - PRE ADJUSTMENTS

1- REQUIRED EQUIPMENTS.

- 1.1- Oscilloscope.
- 1.2- Connect oscilloscope between TPY1 (Q352-C) and ground.
- 1.3- Position controls/adjust following the information below:

| | |
|--------------------------|---------|
| R HIGH LIGHT (R-DR)..... | 40H |
| B HIGH LIGHT (B-DR)..... | 40H |
| R LOW LIGHT (R-CUT)..... | 000H |
| B LOW LIGHT (B-CUT)..... | 000H |
| G LOW LIGHT (G-CUT)..... | 125H |
| COR..... | MINIMUM |
| CONTRASTE..... | MAXIMUM |
| SCREEN..... | MINIMUM |
- 1.4- Apply a PHILIPS pattern.
- 1.5- Press "5" at the remote control to obtain a simple horizontal line
- 1.6- Adjust G-CUT to obtain a reading at TPY1, as figure below. (*)

- 1.7- Adjust SCREEN until a first line appears at the screen, and don't change it after this.
- 1.8- Adjust the other DAC's that match the other two colours (R-CUT, B-CUT) until it turns the line white.
- 1.9- Exit to Normal Mode pressing NORMAL at the remote control.

1- SOUND INSPECTION

- 1.1- Verify if sound varies correctly pressing VOL(+) or VOL(-).
- 1.2- Verify if tone is adjusted using the "TONE" control at the "SOUND" Menu.

2- INSPECTION OF COLOUR CONTROL

- 2.1- Apply a PHILIPS pattern.
- 2.2- Select Pic. Menu DYNAMIC, and adjust NORMAL IMAGE using the remote control.
- 2.3- To access the function NORMAL IMAGE press MAIN MENU and next press the "<" or ">" navigation keys to select the function **IMAGE**. Press the "v" navigation keys to enter menu. Press the "N" key at the remote control to activate function NORMAL IMAGE.
- 2.4- Verify if saturation is normal and sufficient.
- 2.5- Confirm the variation of the colour phase acting at the TINT control, receiving NTSC pattern.

3- OTHER INSPECTIONS.

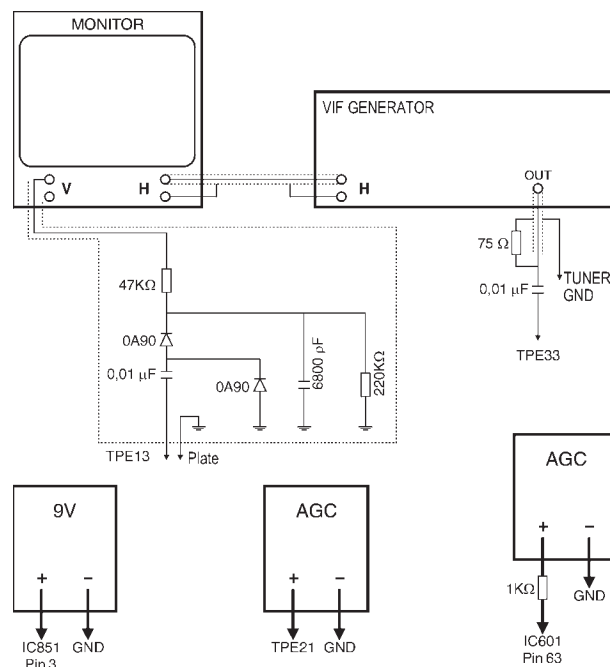

- 3.1- Tune the VHF, UHF and CATV channels and check if there is good reception.
- 3.2- Press the key **TV/VIDEO** and verify ON SCREEN.
- 3.3- Return to the TV Mode.

CALIBRATION OF VIDEO IF

1- REQUIRED EQUIPMENT

- 1.1- Monitor
- 1.2- VIF generator
- 1.3- VIF detector
- 1.4- Power source of $9,0 \pm 0,1\text{V}$ and $4,0 \pm 0,1\text{V}$
- 1.5- Bias box to AGC
- 1.6- Resistor Jumper of $1\text{K}\Omega$

CONEXIONS

CALIBRATION OF VIDEO IF (continuing)

1- PREPARATION

- 2.1- Connect the VIF generator positive output cable to TPE33 and the negative to ground.
- 2.2- Connect the VIF detector positive output cable to TPE13 and negative to ground.
- 2.3- Connect the +9V power source positive to pin 3 of IC851 and negative to ground.
- 2.4- Connect the +4V power source positive in series with 1K Ω resistor to pin 63 of IC601 and negative to ground.
- 2.5- Connect the polarization of AGC with positive to TPE21 (IF AGC) and negative to the ground.
- 2.6- Enter Serviceman Mode.

2- ADJUSTMENTS

- 3.1- Calibrate monitor to 200mVp-p
- 3.2- Decrease the VIF generator output to minimum signal.
- 3.3- First, turn on the instruments and after that, the power sources.
- 3.4- Adjust bias AGC to obtain maximum gain.
- 3.5- Adjust the VIF generator output to obtain 200mVp-p at the monitor.
- 3.6- Increase 20dB to VIF generator output and adjust the Bias AGC to obtain 200mVp-p at the monitor
- 3.7- Confirm that the level of CC (42,17 MHz) and PC (45,75 MHz) are within the especificated below.

AFT ADJUSTMENTS

1- REQUIRED EQUIPMENTS

- 1.1- Oscillator CW 45,75 MHz
- 1.2- VIF detector
- 1.3- Digital multimeter
- 1.4- Short Jumper

2- PREPARATION

- 2.1- Disconnect the signal from the antenna terminal
- 2.2- Connect the multimeter between TPE29 and ground
- 2.3- Connect the CW oscillator using VIF detector between TPE33 and ground
- 2.4- Adjust the CW oscillator output to 90+-5dBu (75 Ω open).
- 2.5- Position the DAC AFT in "80H".

3- ADJUSTMENTS

- 3.1- Adjust AFT using coil L167 until the voltage below (*) is obtained at TPE29.
 (*) 4,0 \pm 1,0V (after 10 seconds "ON")
 (*) 4.5 \pm 1,0V (after heating)
- 3.2- Vary the frequency of CW oscillator between \pm 100KHz and verify if tension variation at the multimeter is higher than \pm 1,2V

AGC-RF ADJUSTMENTS

1- REQUIRED EQUIPMENT

- 1.1- Digital Multimeter
- 1.2- Attenuator

2- PREPARATION

- 2.1- Tune a COLORBAR patten.
- 2.2- Adjust the input signal level to 64 \pm 2dB (75 Ω open).
- 2.3- Connect Digital multimeter between TPE23 and ground

3- ADJUSTMENTS

- 3.1- Select DAC AGC RF(RF) CHQ4 (Service Mode)
- 3.2- Adjust the DAC using the keys VOL(+) and VOL(-) until \pm 6,2V at TPE23.

NOISE LEVEL ADJUSTMENTS

1- REQUIRED EQUIPMENTS

- 1.1- Oscilloscope
- 1.2- 7KHz filter

2- PREPARATION

- 2.1- Tune a COLORBAR patten (no sound modulation).
- 2.2- Position tone control to center
- 2.3- Position VOLUME control to maximum.
- 2.4- Connect Oscilloscope to speakers terminals.

3- VERIFICATION

- 3.1- The maximum amplitude of the noise signal should be less than 1,5Vp-p.
- 3.2- When it is higher than 1,5Vp-p, activate 7KHz filter at the speakers terminals and verify if noise level is less than 0,5Vp-p.

VIDEO OUT ADJUSTMENT

1- REQUIRED EQUIPMENT

- 1.1- Oscilloscope
- 1.2- Attenuator

2- PREPARATION

- 2.1- Apply a COLORBAR patten.
- 2.2- Adjust the input signal level to 75dB (75Ω open).
- 2.3- Connect the test tip of oscilloscope to TPE11

3- ADJUSTMENTS

- 3.1- Select DAC VIDEO (VID) CHQ4 (Service Mode).
- 3.2- Adjust the video signal level to $1,0 \pm 0,05 V_{o-p}$ using the keys VOL(+) and VOL(-).

SUB-CONTRAST ADJUSTMENTS

1- REQUIRED EQUIPMENT

- 1.1- Oscilloscope
- 1.2- Jumper
- 1.3- Attenuator

2- PREPARATION

- 2.1- Tune a COLORBAR patten.
- 2.2- Adjust the input signal level to 75dB (75Ω open)
- 2.3- Connect the jumper between TPE3 and ground
- 2.4- Connect the oscilloscope between TPE27 and ground.
- 2.5- Confirm if Picture Menu is "DYNAMIC".
- 2.6- Position the controls at the following positions:
 G LOW LIGHT (G-CUT).....125H
 BRIGHT.....CENTER
 CONTRAST.....NORMAL OR MAX.
 COLOUR.....MINIMUM

3- CALIBRATION

- 3.1- Select DAC SUB BRIGHT (SUB BR) CHQ2.
- 3.2- Adjust SUB BR until you have a level of $2,2 \pm 0,1 V_{p-p}$ and confirm if there is no deformation of waveform.
- 3.3- Select DAC SUB-CONTRAST, CHQ2.
- 3.4- Adjust SUB-CONTRAST level to $2,9 \pm 0,1 V_{p-p}$ at TPE27, as figure below.

COLOUR-SATURATION ADJUSTMENT

1- REQUIRED EQUIPMENT

- 1.1- Oscilloscope
- 1.2- Jumper

2- PREPARATION

- 2.1- Tune a COLORBAR patten.
- 2.2- Adjust the input signal level to 75dB (75Ω Open).
- 2.3- Confirm that the Picture Menu is "DYNAMIC"
- 2.4- Confirm that channel colour is "NORMAL"
- 2.5- Confirm that temperature of colour is "NORMAL"
- 2.6- Connect oscilloscope between TPE27 and ground
- 2.7- Connect the jumper between TPE3 and ground
- 2.8- Position controls at the following positions:

G LOW LIGHT (G-CUT)... 25H
 BRIGHT..... NORMAL OR CENTER
 CONTRAST..... NORMAL OR MAX.
 COLOUR..... NORMAL OR CENTER

3- ADJUSTMENTS

- 3.1- Select DAC SUB BRIGHT at CHQ2.
- 3.2- Adjust SUB BRIGHT to make the pedestal level remain $2,2 \pm 0,1 V_{p-p}$ and confirm that there is no deformation of waveform.
- 3.3- Select DAC SUB-COLOUR at CHQ2.
- 3.4- Adjust SUB- COLOUR level to $2,5 \pm 0,1 V_{p-p}$ at TPE27, as shown on figure below:

SHARPNESS ADJUSTMENT

1- PREPARATION

- 1.1- Select sharpness control using Menu IMAGE
- 1.2- Adjust the control SHARPNESS to center.

2- ADJUSTMENTS

- 2.1- Select DAC SUB-SHARPNESS at CHQ2.
- 2.2- Adjust SUB SHARPNESS to(*) using the remote control.
 (*).....14"=17H
 (*).....20"=1BH
- 2.3- Press key "N" to exit SERVICE mode.

SHUT DOWN SYSTEM CONFIRMATION

1- REQUIRED EQUIPMENT

- 1.1- DC power source
- 1.2- Voltmeter

2- PREPARATION

- 2.1- Apply a CROSS HATCH pattern.
- 2.2- Adjust the controls BRIGHT and CONTRAST until current turns to zero.

3- CONFIRMATION

- 3.1- Connect the DC voltmeter to cathode of D591 and confirm that voltage is lower than level(*)A.
- 3.2- Adjust the DC power source to level(*)B and confirm that SHUTDOWN is not acting.
- 3.3- Adjust the DC power source to level(*)C and confirm that SHUTDOWN is not acting.

| LEVELS | 14" (V) | 20" (V) |
|--------|---------|---------|
| (*)A | 21,60 | 22,30 |
| (*)B | 23,60 | 24,10 |
| (*)C | 25,60 | 26,10 |

HORIZONTAL WIDTH AND CENTERING ADJUSTMENTS

1- ADJUSTMENT OF HORIZONTAL CENTERING

- 1.1- Position the control BRIGHT to minimum.
- 1.2- Tune to PHILIPS standards.
- 1.3- Select the DAC of HORIZONTAL CENTERING (HC) at CHQ3 Service Mode.
- 1.4- Adjust the HORIZONTAL CENTERING using the keys VOL(+) OR VOL(-).

2- VERIFICATION OF HORIZONTAL WIDTH

- 2.1- Verify if horizontal width, is within the specifications below:

| DIÂMETRO "A" | MODELO |
|--------------|--------------|
| 290 ± 5 mm | 20 polegadas |
| 200 ± 5 mm | 14 polegadas |

VERTICAL HEIGHT AND CENTERING ADJUSTMENTS

1- ADJUSTMENTS.

- 1.1- Tune a Philips pattern.
- 1.2- Select the DAC of VERTICAL CENTERING at CHQ3 Service Mode.
- 1.3- Adjust the vertical placement pressing the VOL(+) or VOL(-) keys until the image is centered.
Suggestion: the center line of CRT should coincide with the centerline of PHILIPS pattern).
- 1.4- Select the DAC VERTICAL ALTITUDE (V ALT) AT CHQ3 at SERVICE mode.
- 1.5- Adjust the correct altitude pressing VOL(+) or VOL(-) keys

WHITE BALANCE PRE ADJUSTMENT AND CRT CUT OFF ADJUSTMENT

IMPORTANT: This adjustment should be done after 15 minutes heating time.

1- REQUIRED INSTRUMENTS

- 1.1- Oscilloscope

2- PREPARATION.

- 2.1- Connect oscilloscope between TPY1 and ground.
- 2.2- Apply a PHILIPS pattern.
- 2.3- Confirm if Picture Menu is **"DYNAMIC"**
- 2.4- Confirm if Channel Color is **"NORMAL"**
- 2.5- Confirm Colour Temperature in **"NORMAL"**
- 2.6- Enter Service Mode at CHQ5.
- 2.7- Position controls at the following positions:
R HIGH LIGHT(R-DR).....40H
B HIGH LIGHT(B-DR).....40H
R LOW LIGHT (R-CUT).....000H
B LOW LIGHT(B-CUT).....000H
GLOW LIGHT(G-CUT).....125H
SCREEN.....MINIMUM

3- ADJUSTMENTS

- 3.1- Press "5" at the remote control to obtain a simple horizontal line.
- 3.2- Confirm that the Pedestal level value at pin TPE27 is $2,2 \pm 0,1V_{p-p}$.
- 3.3- Adjust G-CUT to obtain (*)A at TPY1, as figure below:

- 3.4- Adjust SCREEN until a first line appears at the screen, and don't change it after this.
- 3.5- Adjust the other DACs that correspond to the other two colours (R-CUT,B-CUT) until line turns white.
- 3.6- Exit to normal mode pressing the key **NORMAL** at the remote control.

FOCUS ADJUSTMENT

1- PREPARATION

- 1.1- Apply a MONOSCOPE or PHILIPS pattern.
- 1.2- Confirm that Picture Menu is "**NORMAL DINAMIC**".
- 1.3- Adjust the controls to the following positions:
 CONTRAST..... MAXIMUM
 BRIGHT..... NORMAL
IMPORTANT: SUB BRIGHT adjustment should have been done before.

2- ADJUSTMENTS

- 2.1- Adjust the FOCUS meter (FBT) until the best focalization of image is obtained.

FRONT PANEL CHECKING

1- TV/AV VERIFICATION

- 1.1- Apply a PHILIPS pattern.
- 1.2- Press **TV/AV** button and verify if "**AV**" shows up ON SCREEN

2- VOLUME VERIFICATION

- 2.1- Press VOL(+) or VOL(-) button and watch for a slight variation.
- 2.2- Confirm that indication of volume position change slightly on ON SCREEN.

3- CONFIRMING THE FUNCTION TURN ON/OFF OF AC SWITCH

- 3.1- Turn OFF and turn ON the AC switch. Confirm that previous memory position is saved. (it shows PHILIPS pattern).
- 3.2- Confirm that volume is minimum and the other controls are on the final adjustment condition.
- 3.3- Verify if led is on.

FINAL POSITION OF CONTROLS

VOLUME..... MINIMUM
 COLOUR..... CENTER
 BRIGHT..... CENTER
 CONTRAST..... MAXIMUM

4- CHECKING THE MICROPROCESSOR

- 4.1- Press the CH(+) or CH(-) button at the remote control and confirm that ON SCREEN of the number of channels previously tuned, up and down.

5- STAND BY OPERATION

- 5.1- Turn the TV on using the ON/OFF switch.
- 5.2- Press the ON/OFF button at the remote control to enter in the STAND BY mode.
- 5.3- Disconnect and reconnect the power supply cable.
- 5.4- Confirm if TV set is at STAND BY.
- 5.5- Press the CH(+) or CH(-) button at the remote control and verify if the TV turns on.

6- VERIFICATION OF THE "FUNC" KEY

- 6.1- Press the **FUNC** key at the front panel and verify if the following sequence appears:
 AUTOMATIC TUNING
 SKIPP CHANNEL OFF
 ANTENNA TV

7- HOTEL MODE CONFIRMATION

- 7.1- Adjust the volume to 15.
- 7.2- Enter **HOTEL MODE**. To enter, set **OFF TIMER** to 30 and press simultaneously **CH(+)** at the front panel and **RECALL** at the remote control.
- 7.3- Confirm that the **MAIN MENU** and **OFF TIMER** are not operating.
- 7.4- Confirm that the maximum volume possible is 15
- 7.5- Exit **HOTEL MODE**. To exit, press simultaneously **VOL(-)** at the front panel and **OFF TIMER** at the remote control.
- 7.6- Confirm that **OFF TIMER** operates normally.

AV IN TERMINALS CHECKING

1- REQUIRED INSTRUMENTS

- 1.1- TV pattern signal generator

2- PREPARATION

- 2.1- The colour adjustment should already been done.
- 2.1- Set the **TV/AV** switch to **AV** position.

3- CONFIRMATION

- 3.1- Confirm that "**AV**" appears on ON SCREEN
- 3.2- Confirm that image and sound disappears
- 3.3- Connect the pattern signal generator to the rear AV input terminal and confirm that noise and image appears.
- 3.4- Connect the other source to the front AV input terminal and confirm that the pattern signal connected to the rear AV input terminal was substituted by the signal of front AV input terminal.
- 3.5- Set the **TV/AV** switch to **TV** position.

AUTOMATIC AND MANUAL MEMORIZATION

1- VERIFICATION OF AUTOMATIC MEMORIZATION.

- 1.1- Adjust the input pattern signal level to 40 dB
- 1.2- Press **FUNC** at the front panel and it will appear an indication of **AUTOMATIC SINTONY**.
Press **VOL(+)** at the front panel to begin automatic memorization.
- 1.3- Verify the following items:
 - Channel changes
 - Automatic sintony
- 1.4- When memorization process is over, turn off the TV using **ON/OFF** button.
- 1.5- Turn on the TV again using **ON/OFF** button and verify the memorized channels using **CH(+)** or **CH(-)**.

2- VERIFICATION OF MANUAL MEMORIZATION.

- 2.1- Press **FUNC** at front panel until select **SKIP** channel.
- 2.2- To add a channel press **VOL(+)** or **VOL(-)** until "OFF" appears.
- 2.3- To take one channel out press **VOL(+)** or **VOL(-)** at the set until **ON** appears.
- 2.4- To change channels press the **CH(+)** or **CH(-)**.

TUNE CHECKING

1- PREPARATION

- 1.1- Turn on the TV set using On/OFF switch.

2- VERIFICATION

- 2.1- Turn on signal at the TV set.
- 2.2- Press any existing channel number using the remote control and verify if channel is selected.
- 2.3- Verify at bands VHF LOW, VHF HIGH, UHF and CATV.

AUDIO CHECKING

1- CONFIRMING TONE AND VOLUME

- 1.1- Apply a pattern signal with sound.
- 1.2- Confirm that high frequency sound is altered when tone level is varied at "Sound menu".
- 1.3- Press the **VOL(+)** or **VOL(-)** at the remote control and notice a slight variation.

2- CONFIRMATION OF NOISE MUTE AND BLUE SCREEN

- 2.1- Apply a PHILIPS pattern.
- 2.2- Turn on BLUE-BACK at the **FUNC MENU**. Confirm if audio output is normal.
- 2.3- Eliminate antenna signal or reduce the signal strenght. Confirm if blue screen appears and audio is cut off.
- 2.4- Turn off BLUE-BACK at the **FUNC MENU**. Verify if blue screen doesn't appear and if sound exist (noise)
- 2.5- Turn BLUE-BACK again at **FUNC MENU**.

PURITY AND CONVERGENCE ADJUSTMENTS

Adjustment is necessary only if the CRT or the deflection yoke is replaced or if the setting was disturbed.

1. When the Yoke or the CRT are substituted:

- 1.1- Position the deflexion yoke and the convergence ring at the neck of the CRT.
- 1.2- Position the convergence ring as figure below:

- 1.3- Turn on the TV set and tune on a red pattern
- 1.4- Position the deflection coil to obtain an uniform red at the screen.
- 1.5- Enter service mode and press **RECALL** at the remote control to begin purity adjustment mode.
- 1.6- Leave the set heating up for 30 seconds at white screen.

2. Primary adjustment of estatic convergence (centering)

- 2.1- Connect a crosshatch generator to the set and tune in signal. Observe misconvergence at center of the screen only.
 - 2.2- Adjust the 4 pole magnet (center rings); separate tabs and rotate to converge blue with red.
 - 2.2- Adjust the 6 pole magnet (rear rings); separate tabs and rotate to converge blue and red (magenta) with green.
- Note:** Precise convergence at this point is not important.

3- Purity Adjustment

- 3.1- Position TV set with screen pointed to the east
- 3.2- Fully degauss the receiver by using an external degaussing coil.
- 3.3- Press the **RECALL** button on the Remote Control again until the Purity Check (green screen) appears.
- 3.4- Move away the deflection coil and adjust rings 1 and 2 in a way that the red portion stay exactly centered in equal proportions to blue and green. (figure below):

- 3.5- Slowly move the deflection coil forward until an uniform red is obtained completing the whole screen.
- 3.6- Fix the deflection coil in place
- 3.7- Keep **RECALL** button pressed at the remote control and verify the purity of colours green, blue and white. Recheck for purity and readjust if necessary.

4- Adjustment of estatic convergence

- 4.1- Apply a crosshatch pattern.
- 4.2- Overcome the red line to blue adjusting the rings 3 and 4 (adjust center).

- 4.3- Overcome the red and blue lines with green adjusting the rings 5 and 6 (adjust center)

5- DYNAMIC CONVERGENCE ADJUSTMENT

- 5.1- Move the DY on a horizontal and vertical way simultaneously, to obtain a perfect side colour overcome.
- 5.2- Adjust the DY position for the image to stay symmetrical in relation to the geometry of the screen.
- 5.3- Position the rubber parts to keep the DY in place.
- 5.4- If necessary, use permalloy to correct convergence on the corners.

Note: To position the rubber parts (skids) to the DY, keep an angle of 120 degrees between each part as is shown on figure below:

- 5.5- If necessary use permalloy to correct convergence on the corners.
- 5.6- Put procedure 3.7 into action.
- 5.7- Exit Service Mode.

VERIFY PURITY ADJUSTMENT WITH THE HELP OF A MICROSCOPE

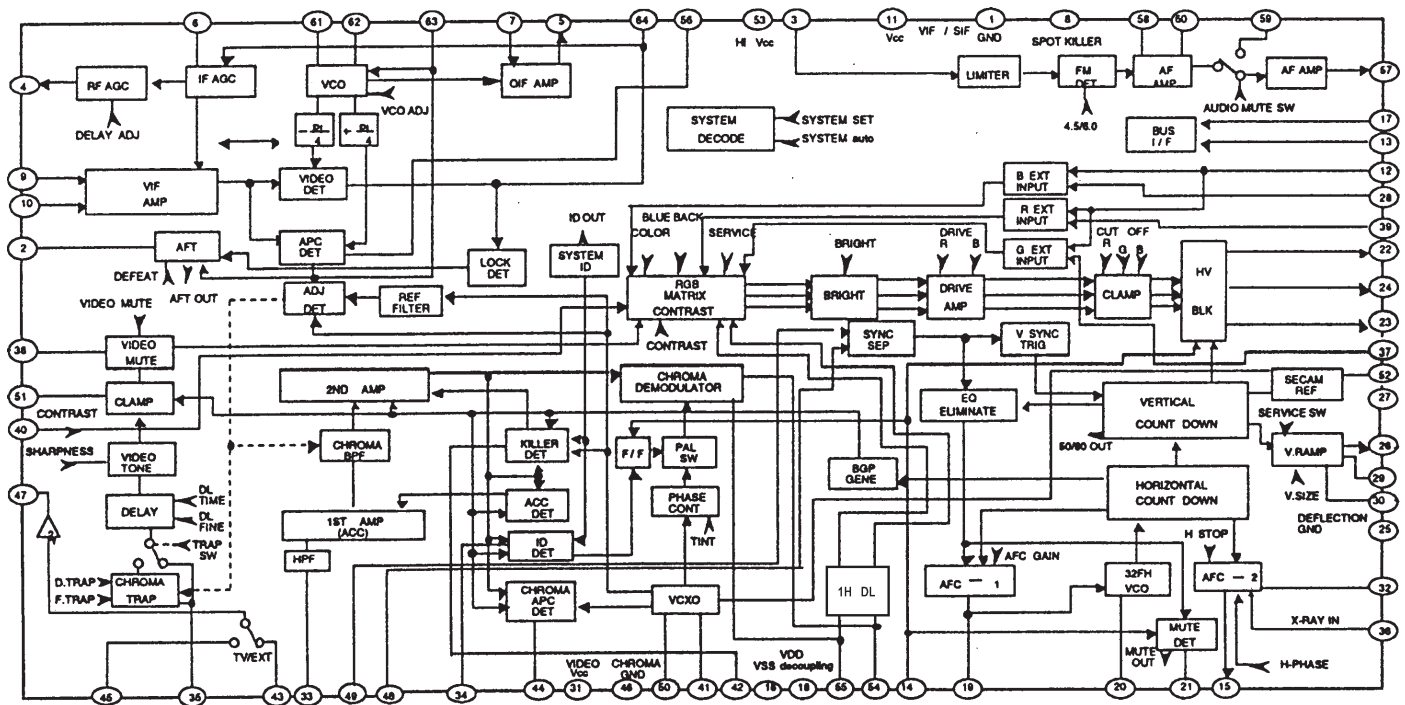

- 1- Apply a white pattern.
- 2- Using a microscope, observe the pixel with a correct format, adjust the purity rings.

- 3- Using a microscope, observe the pixel on the sides of the screen and compare figure below. To obtain a pixel with a correct format, adjust the deflector coil moving forward and back.

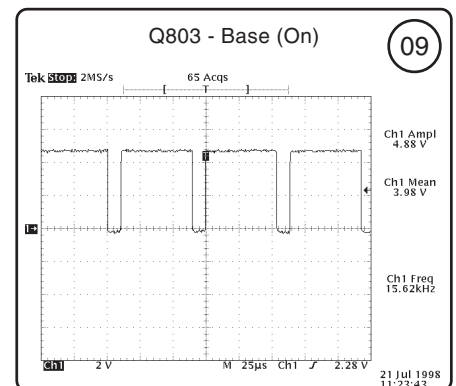

IC601 - Pins and Functions

| PINO | NOME | TENSÃO | DESCRIÇÃO | PINO | NOME | TENSÃO | DESCRIÇÃO |
|------|-----------------|---------------|----------------------------------------|------|------------------|---------------|-------------------------------------------------|

| 39 | R IN | DC 2.5V | | 64 | VIF VIDEO OUT | 2.2Vp-p | Video Detector output |

HOW TO OBTAIN WAVE FORMS

1. The indication "N9" at the schematic diagram, shows the place of measuring points of the respective wave forms, shown below. The place is not exact, another point, in the same connection, can be used to have a measurement.
2. Connect to the terminal of antenna (RF), one signal generator - colorbar PAL-M.
3. Adjust the controls of TV set (audio /picture) to normal. Adjust the volume to minimum.
- 4- Every form of video wave should be visualized in the oscilloscope of wide band and low capacity test points (1 to 10). The form and peak amplitude may vary depending on the oscilloscope and it's adjustment.

ENGLISH

ESPAÑOL

Como obtener las formas de onda:

1. La indicación "Nº", en el esquema eléctrico de la placa E/Y, muestra la localización del punto de medición de las respectivas formas de onda mostradas abajo. La localización es genérica, pudiendo ser utilizado otro punto más accesible de la conexión para se efectuar la medición.
2. Conect al terminal de antena (RF), un generador de señal Colorbar PAL-M.
3. Ajuste los controles del televisor (audio/picture) para normal. Ajuste el volumen para mínimo.
4. Todas las formas de onda de video deben ser visualizadas en osciloscopio de banda ancha y con punta de prueba de baja capacitancia (1 a 10).
La forma y amplitud de pico pueden variar dependiendo del osciloscopio y de su ajuste.

| Peso | 9,6 kg | 17 kg |

Control Remoto:

Alimentación: 3V (2 pilas pequeñas - tipo AA)
 Longitud infra-rojo: 9500 Å (Angstrom)
 Cantidad de teclas: 27
 Dimensiones (AN x AL x P): (51 x 28 x 150) mm
 Peso: 55g

Accesorios proporcionados:

- 1 Transmisor de Control Remoto
- 1 Adaptador de impedancia 300Ω / 75Ω (Balun)
- 2 pilas 1,5V (ABNT/IEC)
- 1 Antena interna (apenas para modelo 14")

Las especificaciones arriba detalladas, están sujetas a alteraciones sin previo aviso

Antes de Comenzar

Este aparato posee componentes sensibles a la electricidad estática. Para efectuar servicios en este aparato, utilice una mesa limpia y sin utensilios encima de ella. Evite desmontar otros aparatos en forma simultánea con este, con el fin de evitar pérdida o intercambio de componentes.

Al abrir el gabinete, verificar si hay polvo o residuos acumulados en el interior del aparato. Si por acaso encontrarlos, remuévalos con un pincel suave y un mini-aspirador. Si hubiese necesidad, utilice un spray limpia placas apropiado.

Para ejecutar servicios en las placas, utilice una mesa conectada a tierra y una pulsera anti-estática. Cerciórese de aterrar apropiadamente el chasis del aparato a través del contacto con la superficie metálica de la mesa. Si son utilizadas mesas con cubierta aislante (como madera, formalita o goma) utilice una malla de atterramiento.

Para mediciones y verificaciones utilice solamente herramientas y medidores en perfecto estado. Tome cuidado especial al hacer mediciones en terminales de CI's con el aparato encendido. Un corto circuito entre los terminales de CI podrá inutilizarlo.

Atención: La electricidad estática de las ropas no acostumbra a descargarse a través de la pulsera anti-estática. Evite apoyar los terminales de los CI's en las ropas durante el trabajo. El circuito del CRT trabaja con voltajes muy altos. Tome bastante cuidado al trabajar en el interior del aparato, con este encendido. El cinescopio retiene una gran carga de electricidad, mismo después del aparato haber sido apagado. Antes de desmontar cualquier componente del televisor, descarregue el CRT haciendo un corto circuito con un cabo aislado entre el ánodo y la tierra del chasis.

Importante: Este televisor fue contruido dentro de normas internacionales para protección contra descargas eléctricas y contra emisión de Rayos-X. Para mantener el aparato en conformidad con las características originales del proyecto, utilice solamente componentes originales Panasonic.

ATENCIÓN

Para la sustitución de componentes identificados con este símbolo en el esquema eléctrico, utilice solamente piezas originales de la Lista de Piezas en el final de este Manual.

COMO ABRIR EL GABINETE

¡ ATENCIÓN !

El Esquema Electrico de la Placa Principal (anexado)

Conservelo siempre junto a este manual

Ubicación de los Controles

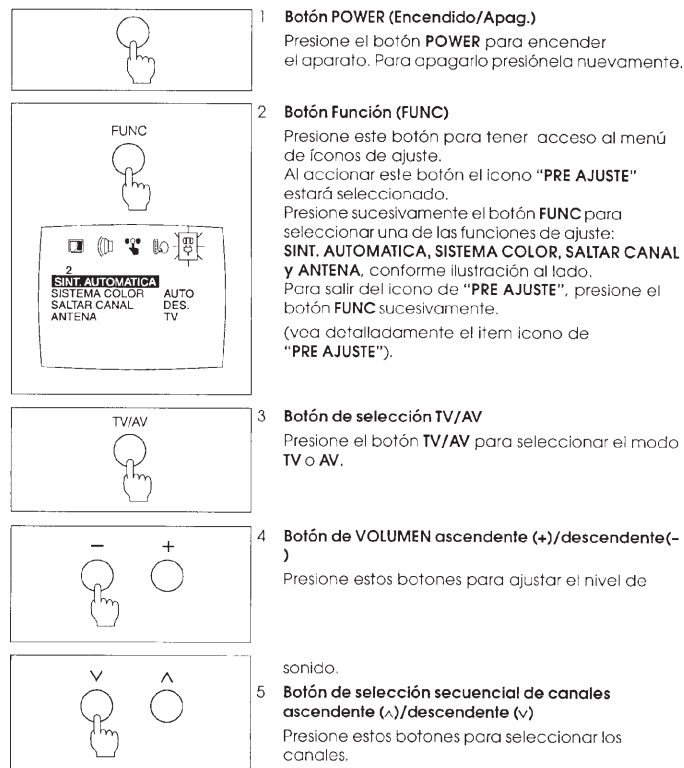

Ubicación de los Controles

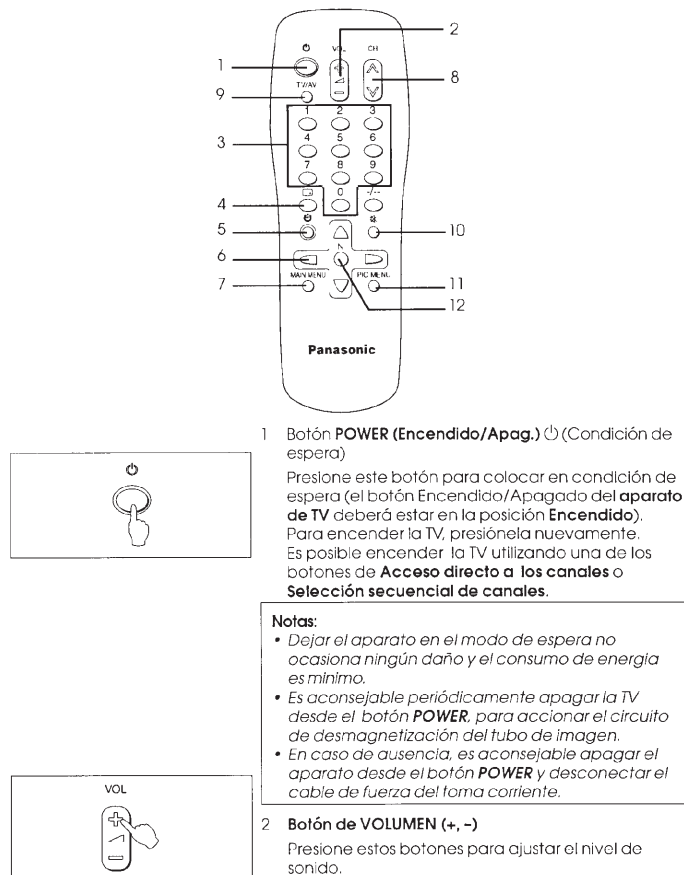

NOTA:
Este transmisor de control remoto usa 2 pilas de tamaño "R6" (AA).

Operación en el televisor

Operación con el control remoto

Notas:

- Dejar el aparato en el modo de espera no ocasiona ningún daño y el consumo de energía es mínimo.
- Es aconsejable periódicamente apagar la TV desde el botón **POWER**, para accionar el circuito de desmagnetización del tubo de imagen.
- En caso de ausencia, es aconsejable apagar el aparato desde el botón **POWER** y desconectar el cable de fuerza del toma corriente.

Operación con el control remoto

- 3 Botones para Acceso directo a los canales**
Presione estos botones para seleccionar el canal deseado.
Para canales con dos o tres dígitos, digite los números en la secuencia.
ej.: canal 13 digite 1 y 3.
canal 113 digite 1, 1 y 3 (para TV por cable).

- 4 Botón RECALL (llamada)**
Presione este botón para verificar el número del canal y el tiempo para la desconexión del aparato cuando esta función esté activada a través del botón **TIMER**, conforme ilustración al lado.

- 5 Botón TIMER**
Este televisor puede ser ajustado para desconectarse después de un período determinado de tiempo.
Presionando el botón **TIMER** se puede seleccionar el tiempo para 30, 60 o 90 minutos. En los tres minutos finales, antes que la TV sea desconectada, el indicador de tiempo destellará.

Nota:

Seleccionando el modo **AUTO**, él entrará en la condición de espera 5 minutos después del término de la transmisión de la estación de TV. El modo **AUTO** no opera cuando la TV está en el modo **AV**.

- Como cancelar el TIMER**
Ajuste el tiempo para "0" presionando el botón **TIMER** o desconecte la TV.

- 6 Teclas para la dirección de los menús**

Operación con el control remoto

- 7 Botón MAIN MENU**
Presione este botón para acceder en la pantalla del televisor al **MENÚ DE ICONOS**.

- 8 Botón de selección Secuencial de canales**
Presione estas teclas de selección secuencial de canales en orden creciente o decreciente.

- 9 Botón TV/AV**
Presione este botón para seleccionar el modo TV o AV.

- 10 Botón MUTE**
Presione este botón para interrumpir momentáneamente el sonido. El símbolo "M" aparecerá en color rojo. Para cancelar esta función presínelo nuevamente.

- 11 Botón PIC MENU (menú de imagen)**
Presione el botón **PIC MENU** para seleccionar secuencialmente el menú de imagen, como se muestra a continuación:
- | Pantalla | Función |
|-----------------|-------------------------------------------------------------------------------------------------|
| DINAMICO | Para ambientes muy claros. Este menú selecciona un nivel mayor brillo y contraste. |
| NORMAL | Para ambientes con claridad normal. Este menú selecciona el nivel normal de brillo y contraste. |
| SUAVE | Para ambientes oscuros. Este menú selecciona niveles reducidos de brillo y contraste. |
| JUEGOS | Este menú regula niveles de brillo y contraste apropiados para juegos de video games. |

- 12 Tecla "N" (Normalización)**
Presione este botón para ajustar el nivel de **Color, Matiz (solamente para NTSC), Brillo, Contraste, Nitidez, Temp. de color y Tono de sonido** a los niveles pre-ajustados por la fábrica.

Menú principal

Cuando el botón **MAIN MENU** es presionado, el menú de iconos aparece en la pantalla del televisor, permitiendo el acceso a los iconos de ajuste de **IMAGEN, SONIDO, FUNCIONES, IDIOMA** y de **PRE AJUSTE**.

| PRESIONE MAIN MENU | | | | |

Nota:
En el modo **AV** solamente la función **PANTALLA AZUL** está disponible.

Nota:
En el modo **AV** solamente la función **SISTEMA COLOR** está disponible.

Operación del icono de imagen

Nota: Presionando el botón "N" (Normal) en el control remoto mientras es mostrado el menú de imagen, el ajuste de función retorna al ajuste de fábrica.

| PRESIONE | ITEM | EFEECTO | INDICACIÓN EN PANTALLA |
|----------|--------------------------|--------------------|------------------------|
| ▼ ▲ | COLOR | Menos Més | 32 COLOR |
| ▼ ▲ | MATIZ (solamente p/NTSC) | Más Verde Más Rojo | 32 MATIZ |
| ▼ ▲ | BRILLO | Oscuro Claro | 32 BRILLO |
| ▼ ▲ | CONTRASTE | Menos Más | 63 CONTRASTE |
| ▼ ▲ | NITIDEZ | Menos Más | 32 NITIDEZ |
| ▼ ▲ | TEMP. DE COLOR | ◀ ▶ | Vivo o Norm |

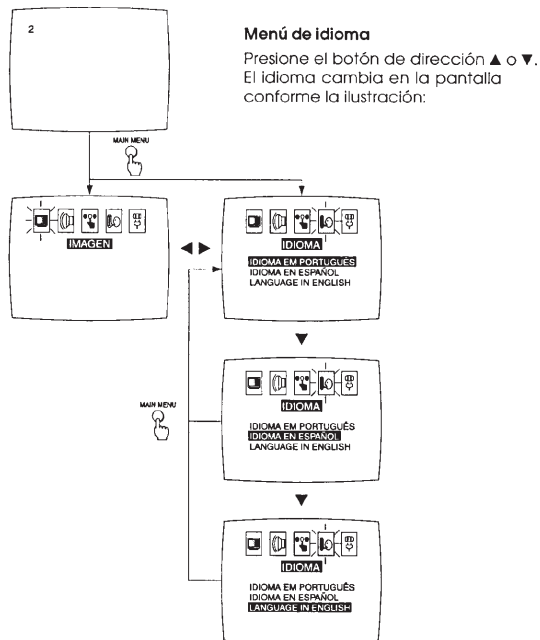

Operación del icono de Sonido

| PRESIONE | ITEM | EFEECTO | INDICACIÓN EN PANTALLA |
|----------|------|-----------|------------------------|
| ▼ ▲ | TONO | Menos Más | 32 TONO |

Nota: Presionando el botón "N" (Normal) en el control remoto mientras es mostrado el Menú de sonido, el ajuste de función retorna al ajuste de fábrica.

Operación del icono de Idioma

Operación del icono de PRE AJUSTE

Los ítems de PRE AJUSTE pueden ser operados tanto por el control remoto como por la TV.

Sintonía automática

Por el aparato

- 1 Presione el botón **FUNC.** La función **SINT. AUTOMATICA** estará preseleccionada.
- 2 Presione el botón **VOLUMEN (+)**. La sintonía se inicia automáticamente.
- 3 Para finalizar presione el botón **FUNC** 4 veces.

Por el control remoto

- 1 Presione el botón **MAIN MENU** y con los botones de dirección ◀ o ▶ seleccione la posición **PRE AJUSTE**.
- 2 Seleccione **SINT. AUTOMATICA**, a través del botón de dirección ▼.
- 3 Para accionar la sintonía automática, presione el botón de dirección ▶. La sintonía se inicia automáticamente.
- 4 Para finalizar presione el botón **MAIN MENU** 2 veces.

Sistema de color (NTSC/AUTO/PAL-M/PAL-N)

Para seleccionar el sistema de color **NTSC/AUTO/PAL-M** o **PAL-N** (identificación automática del sistema de color), siga los pasos a continuación:

Por el aparato

- 1 Presione el botón **FUNC** hasta posicionarse en la función **SISTEMA COLOR**.
- 2 Seleccione el sistema de color **NTSC/AUTO/PAL-M** o **PAL-N**, a través del botón **VOLUMEN (+)**.
- 3 Para finalizar presione el botón **FUNC** 3 veces.

Por el control remoto

- 1 Presione el botón **MAIN MENU** y con los botones de dirección ◀ o ▶ seleccione la posición **PRE AJUSTE**.
- 2 Seleccione la función **SISTEMA COLOR**, a través del botón de dirección ▼.
- 3 Con el botón de dirección ◀ o ▶ seleccione el sistema de color deseado **NTSC/AUTO/PAL-M** o **PAL-N**.
- 4 Para finalizar presione el botón **MAIN MENU** 2 veces.

Operación del icono de PRE AJUSTE

Saltar canal

Por el aparato

- 1 Presione el botón **FUNC** hasta posicionarse en la función **SALTAR CANAL** y seleccione el canal a ser excluido, a través de los botones de **Selección secuencial de canales**.
- 2 Con el botón de **VOLUMEN (+)** seleccione **ACT**.
- 3 Para finalizar presione el botón **FUNC** 2 veces.

Por el control remoto

- 1 Presione el botón **MAIN MENU** y con los botones de dirección ◀ o ▶ seleccione la opción **PRE AJUSTE**.
- 2 Seleccione el canal a ser excluido a través de los botones de **Selección secuencial de canales** o **Acceso directo a canales**.
- 3 Seleccione la función **SALTAR CANAL**, a través del botón de dirección ▼.
- 4 Con el botón de dirección ◀ o ▶, seleccione el modo **ACT**.
- 5 Para finalizar presione o botón **MAIN MENU** 2 veces.

Nota:

Los canales que estén con la función **SALTAR CANAL** en el modo **ACT**, no estarán accesibles por los botones de **Selección secuencial de canales**.

Para cancelar la función Salto canal

Por el Aparato

- 1 Para insertar un canal presione el botón **FUNC** hasta posicionarse en **SALTAR CANAL** y seleccione el canal deseado a través de los botones de **Selección secuencial de canales**.
- 2 Con el botón de **VOLUMEN (+)** seleccione **DES**.
- 3 Para finalizar presione el botón **FUNC** 2 veces.

Por el control remoto

- 1 Presione el botón **MAIN MENU** y con los botones de dirección ◀ o ▶ seleccione la opción **PRE AJUSTE**.
- 2 Seleccione el canal a ser incluido a través de los botones de **Selección secuencial de canales** o **Acceso directo a canales**.
- 3 Seleccione la función **SALTAR CANAL**, a través del botón de dirección ▼.
- 4 Con el botón de dirección ◀ o ▶, seleccione **DES**.
- 5 Para finalizar presione el botón **MAIN MENU** 2 veces.

Operación del icono de PRE AJUSTE

Antena

Antes de sintonizar los canales, seleccione la función **ANTENA** y escoja el modo **TV** o **CABLE** dependiendo de la señal de TV disponible en el local.

TV - Sintonía de canales VHF/UHF (2 ~ 69)

CABLE - Sintonía de canales de TV por cable (1 ~ 125).

Nota:
Los aparatos salen de la fábrica ajustados en el modo TV.

Por el Aparato

- 1 Presione el botón **FUNC** hasta posicionarse en la función **ANTENA**.
- 2 Con el botón de **VOLUMEN (+)** seleccione el modo **TV** o **CABLE**, dependiendo de la señal disponible en el local.
- 3 Para finalizar presione el botón **FUNC**.

Por el control remoto

- 1 Presione el botón **MAIN MENU** y con los botones de dirección ◀ o ▶ seleccione la opción **PRE AJUSTE**.
- 2 Seleccione la función **ANTENA**, a través del botón de dirección ▼.
- 3 Con el botón de dirección ◀ o ▶, seleccione el modo **TV** o **CABLE**.
- 4 Para finalizar presione el botón **MAIN MENU** 2 veces.

Modo HOTEL

Esta función es útil para uso en hoteles, o cuando el usuario no desea que otras personas accionen los controles de ajuste del aparato, desajustándolo.

Colocando el aparato en el "modo HOTEL", apenas las funciones **VOL+**, **VOL-**, **CHA**, **CHV**, **PIC MENU**, **RECALL**, **MUTE**, **TV/AV** y **teclas numéricas** pueden ser accionadas, quedando todas las demás funciones: **MAIN MENU**, **TIMER** y **FUNC** bloqueadas. En el ajuste del **VOLUMEN**, accionar la función **VOL+**, el volumen del sonido aumenta hasta el nivel en el cual el aparato estaba ajustado antes de accionar la función "modo HOTEL".

Para accionar la función "modo HOTEL"

- 1 Ajuste el nivel de volumen de sonido para el nivel deseado.
- 2 A través del botón **TIMER** ⌚, seleccione el tiempo para 30 minutos.
- 3 Presione el botón **RECALL** ⏮ del control remoto en dirección a la TV, manteniéndolo presionado.
- 4 Presione el botón de **Selección secuencial de canales** "A" del panel del aparato de TV.

Para salir de la función "modo HOTEL"

Presione el botón **VOL-**, del panel del aparato de TV simultáneamente con el botón **TIMER** ⌚ del control remoto.

COMO OPERAR EL CONTROL DAC MX5Y AJUSTE DE FUNCIONES

1- MODO SERVICIO

1.1- PARA ENTRAR EN EL MODO "CHQ" (SERVICIO):

Posicione el **Off Timer** en 30 la través del control remoto y ajuste el volumen en el mínimo, en el painel del TV. Presione simultáneamente las teclas **"RECALL"** en el control remoto e **VOL(-)** en el painel del TV y la pantalla quedará blanca. Presione **"RECALL"** otra vez y las letras **"CHQ"** aparecen en color carmesí con fondo azul.

- 1.2- Para alternar entre los modos CHQ's presione las teclas "1" o "2" del control remoto (CHQ1 hasta CHQ5).

1.3- PARA SALIR DEL MODO "CHQ" (SERVICIO):

Presione la tecla "N" en el control remoto, o apenas apague el aparelho a través del control remoto.

CHQ1

- 1.1- Presionar las teclas "3" o "4" para alternar las opciones existentes: de **OP1** hasta **OP6**.
- 1.2- Para alterar los datos dentro de cada sub-ítem, presione **VOL(+)** o **VOL(-)** (la letra quedará roja). Para memorizar las alteraciones presione "0" (a letra vuelve a quedar verde).

OP1 (SISTEMA DE COLOR)

Esta opción alterna entre los sistemas de colores que quedarán disponibles en el TV.

OP1=0 AUTO/PAL-M/NTSC (Mod. Binorma)
 OP2=1 AUTO/PAL-M/PAL-N/NTSC (Mod. Trinorma)
 OP1=2 PAL-M (Mod. PAL-M)

OP2 (FUNCION GAME)

Esta opción liga o no la función GAME.

OP2=ON GAME LIGADO
 OP2=OFF GAME DESLIGADO

OP3 (PANASONIC DEMO)

Esta opción acciona o no la función DEMO.

OP4 (TELE-TEXTO) - (no disponible)

Esta opción acciona o no la función TELE-TEXTO.

OP5 (SASO) - (no disponible)

Esta opción acciona o no la función SASO.

OP6 (NOISE MUTE) - (no disponible)

Esta opción acciona o no la función NOISE MUTE, sin la tela azul corta el ruido existente en el canal, sin señal o con señal muy débil.

CHQ2

- 1.1- Presionar las teclas "3" o "4" para alternar entre las opciones existentes, conforme secuencia abajo:
 Para alterar entre las opciones de cada sub-ítem presione **VOL(+)** o **VOL(-)**, la letra permanece verde. No hay necesidad de memorización.

COLOR USUARIO
 SUB COLOR CALIBRACIÓN
 MATIZ USUARIO
 SUB MATIZ CALIBRACIÓN
 BRILHO USUARIO
 SUB BRILHO CALIBRACIÓN
 CONTRASTE USUARIO
 SUB CONTRASTE CALIBRACIÓN
 NITIDEZ USUARIO
 SUB NITIDEZ CALIBRACIÓN

CHQ3

- 1.1- Presionar las teclas "3" o "4" para alternar entre las opciones existentes, conforme secuencia abajo:
 Para alterar entre las opciones de cada sub-ítem presione **VOL(+)** o **VOL(-)**, la letra permanece verde. No hay necesidad de memorización.

HC..... CENTRALIZACIÓN HORIZONTAL
 VC..... CENTRALIZACIÓN VERTICAL
 V ALT..... ALTURA VERTICAL

CHQ4

- 1.1- Presionar las teclas "3" o "4" para alternar entre las opciones existentes, conforme secuencia abajo:
 Para alterar entre las opciones de cada sub-ítem presione **VOL(+)** o **VOL(-)**, la letra permanece verde. No hay necesidad de memorización.

AFT..... CALIBRACIÓN DEL AFT
 VID..... CALIBRACIÓN DEL NIVEL DE VIDEO
 RF..... CALIBRACIÓN DEL AGC DEL RF

CHQ5

- 1.1- Presionar las teclas "3" o "4" para alternar entre las opciones existentes, conforme secuencia abajo:
 Para alterar entre las opciones de cada sub-ítem presione **VOL(+)** o **VOL(-)**, la letra permanece verde. No hay necesidad de memorización.

B-CUT CALIBRA AZUL LOW LIGHT
 G-CUT CALIBRA VERDE LOW LIGHT
 R-CUT CALIBRA ROJO LOW LIGHT
 B-DR CALIBRA AZUL HIGH LIGHT
 R-DR CALIBRA ROJO HIGH LIGHT
 SUB-BR CALIBRA SUB-BRILLO
 BRILHO CALIBRA BRILLO

- 1.2- Presionar la tecla "5" para aparecer la línea BLANCA para la calibración del **SCREEN**. Para desaparecer la línea, presione la tecla "5" nuevamente.

TABLA DIRECTA DE LOS DAC's

| CHQ1 | CHQ2 | CHQ3 | CHQ4 | CHQ5 |
|------|---------------|-------|------|--------|
| OP1 | SUB-COR | HC | AFT | B-CUT |
| OP2 | COR | VC | VID | G-CUT |
| OP3 | SUB-NITIDEZ | V ALT | RF | R-CUT |
| OP4 | NITIDEZ | --- | --- | B-DR |
| OP5 | SUB-CONTRASTE | --- | --- | R-DR |
| OP6 | CONTRASTE | --- | --- | SUB BR |
| --- | SUB-BRILLO | --- | --- | BRILHO |
| --- | BRILLO | --- | --- | --- |
| --- | SUB-MATIZ | --- | --- | --- |
| --- | MATIZ | --- | --- | --- |

ACCESO DIRECTO A LA MEMORIA

- 1.1- Para obtener acceso directo a la memoria posicione en el ítem **CHQ1**, presione simultáneamente las teclas VOL(-) en el TV y "MUTE" en el control remoto.
- 1.2- Para alterar entre las posiciones de memoria presione las teclas "3" o "4".
- 1.3- Para alterar el contenido de cada posición de memoria presione VOL(+) o VOL(-), (la letra quedará roja). Para memorizar las alteraciones presione la tecla "0" (la letra vuelve a quedar blanca).
- 1.4- Para salir de la memoria presione las teclas "1" o "2" para cambiar entre los **CHQ's** o presione la tecla "N", para salir totalmente del modo **SERVICIO**.

INSPECCIÓN ELECTRICA

1- EQUIPAMIENTOS NECESARIOS.

- 1.1- Medidor de Alta Tensión, Range hasta 30KV (TIPO ELECTROSTÁTICO O RESISTIVO).
- 1.2- Voltímetro, Range 30VDC, 150VDC y 300 VAC.
- 1.3- Voltímetro RMS.
- 1.4- DY, CY, CRT.

2- PREPARACIÓN.

- 2.1- Posicionar controles en las siguientes posiciones:

IMAGEN NORMAL AJUSTADO
 VOLUMEN MÍNIMO
 TV/VÍDEO..... TV
 POT SCREENCENTRO
 POT FOCO..... MEJOR PUNTO (visual)

3- INSPECCIÓN DE TENSION.

- 3.1- Ajustar la tensión AC de entrada en 110V.
- 3.2- Encender la llave S801.
- 3.3- Sintonizar padrón CROSS HATCH.
- 3.4- Ajustar los controles SUB-BRILLO (SUB BR) en CHQ5 y SCREEN para obtener corriente de haz cero.
- 3.5- Verificar las tensiones en los puntos abajo:

| TENSIÓN | PUNTO DE TESTE | ESCALA DEL VOLT. |
|----------------------|----------------|------------------|
| 90V ± 2,0V | C823 (+) | 300V |
| 190V ± 15V | E33 - PINO 1 | 300V |
| 22V ± 2,0V | D850 (CÁTODO) | 30V |
| 44V ± 2,5V | D852 (CÁTODO) | 50V |
| 9V ± 1V | TPE9 | 30V |
| 5V ± 1V | TPE10 | 30V |
| 6,3 VRMS ± 0,24V | Y33 - PINO 4 | 30VRMS |
| Para modelos 14 pul. | | |
| 180V ± 15V | E33 - PINO 1 | 300V |

- 3.6- Retornar SCREEN y SUB-BRILLO (SUB BR) para un nivel en que la imagen sea visible.

INSPECCIÓN DEL CIRCUITO DE DEFLEXIÓN Y PRE AJUSTES

1- EQUIPAMIENTOS NECESARIOS.

- 1.1- Medidor de Alta Tensión, Range hasta 30KV (TIPO ELECTROSTÁTICO O RESISTIVO).

2- PROCEDIMIENTO.

- 2.1- Sintonizar padrón PHILIPS.
- 2.2- Seleccionar ALTURA VERTICAL (V ALT) en el CHQ3.
- 2.3- Ajustar la altura hasta obtener una imagen correcta.
- 2.4- Sintonizar padrón CROSS HATCH.
- 2.5- Ajustar BRILLO, SUB-BR en el CHQ5, SCREEN para mínimo, hasta obtener haz cero.
- 2.6- Medir la alta tensión con el voltímetro y verificar si está dentro de los límites abajo:

| MEDIDOR | 20 PULGADAS | 14 PULGADAS |
|----------------|--------------------|--------------------|
| ELECTROSTÁTICO | 26,5 + 1,0 – 1,5KV | 24,5 + 1,0 – 1,5KV |
| RESISTIVO | 26,0 + 1,0 – 1,5KV | 24,0 + 1,0 – 1,5KV |

- 2.7- Sintonizar padrón PHILIPS.
- 2.8- Ajustar BRILLO, SUB-BRILLO (SUB BR) en el CHQ5, SCREEN para obtener imagen normal.
- 2.9- Chequear si la anchura horizontal es normal.
- 2.10- Seleccionar SUB-BRILLO (SUB BR) en el CHQ5, e chequear si el BRILLO es controlado variando SUB-BRILLO (SUB BR) en el CHQ5.
- 2.11- Ajustar CENTRALIZACIÓN HORIZONTAL (HC) en el CHQ3 (MODO SERVICIO).
- 2.12- Ajustar CENTRALIZACIÓN VERTICAL (VC) en el CHQ3 (MODO SERVICIO).

3- PRE AJUSTE DEL AGC RF.

- 3.1- Sintonizar padrón PHILIPS.
- 3.2- Ajustar nivel de la señal en 65 ± 2 dB (75Ω abierto).
- 3.3- Seleccionar AGC RF (RF) en el CHQ4 (MODO SERVICIO) y ajustar a través de la tecla VOL(+) hasta aparecer imagen con nieve, entonces a través de la tecla VOL(-) ajustar en el punto en que la nieve desaparece de la imagen.

PRE AJUSTE DEL CUT OFF

1- EQUIPAMIENTOS NECESARIOS.

- 1.1- Osciloscopio.
- 1.2- Conectar el osciloscopio entre TPY1 (colector de Q352 en la placa Y) y tierra.
- 1.3- Posicionar los controles de la siguiente manera:

R HIGH LIGHT (R-DR).....40H
 B HIGH LIGHT (B-DR).....40H
 R LOW LIGHT (R-CUT).....000H
 B LOW LIGHT (B-CUT).....000H
 G LOW LIGHT (G-CUT).....125H
 COR.....MÍNIMO
 CONTRASTE.....MÁXIMO
 SCREEN.....MÍNIMO

- 1.4- Sintonizar padrón PHILIPS.
- 1.5- Presionar la tecla "5" en el control remoto para obtener una línea horizontal simple.
- 1.6- Ajustar **G-CUT** para obtener una medición en el TPY1, conforme la figura abajo. (*)

- 1.7- Ajustar el SCREEN hasta la primera línea aparecer en la tela, no tocar más en el potenciómetro del ajuste SCREEN.
- 1.8- Ajustar los otros DAC's correspondientes a los otros dos colores (R-CUT, B-CUT) hasta tornar la línea blanca.
- 1.9- Salir para el modo normal presionando la tecla NORMAL en el control remoto.

1- INSPECCIÓN DEL SONIDO

- 1.1- Verificar si el sonido varía correctamente presionando alternadamente las teclas VOL(+) o VOL(-).
- 1.2- Verificar si la tonalidad es ajustada a través del control de **TONO** en el Menú **SONÍDO**

2- INSPECCIÓN DEL CONTROL DE COLOR

- 2.1- Sintonizar padrón PHILIPS.
- 2.2- Seleccionar Pic. Menú **"DINÁMICO"**, y ajustar **IMAGEN NORMAL** por el control remoto.
- 2.3- Para acceder la función **IMAGEN NORMAL** presione la tecla **MAIN MENU** y en seguida las teclas de navegación "<" o ">" para seleccionar la función **IMAGEN**. Presione la tecla "V" para entrar en el menú. Presione la tecla "N" en el control remoto para accionar la función **IMAGEN NORMAL**.
- 2.4- Verificar si la saturación es normal y suficiente.
- 2.5- Confirmar la variación de fase de color actuando en el control **TINT**, recibiendo padrón **NTSC**.

3- OTRAS INSPECCIONES

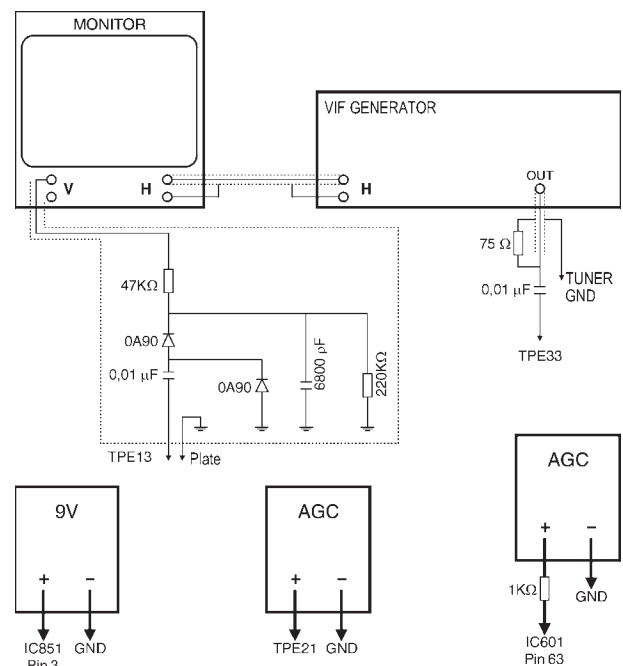

- 3.1- Sintonizar los canales de **VHF, UHF** y **CATV** y confirmar si hay buena recepción.
- 3.2- Presionar la tecla **TV/VÍDEO** y verificar **ON SCREEN**.
- 3.3- Retornar al modo TV.

CALIBRACIÓN DE FI DE VIDEO

1- EQUIPAMIENTOS NECESARIOS.

- 1.1- Monitor.
- 1.2- Generador de barrido de VIF.
- 1.3- Detector de VIF.
- 1.4- Fuentes de $9,0 \pm 0,1V$ y de $4,0 \pm 0,1V$.
- 1.5- Bias box para AGC.
- 1.6- Resistencia puente de 1KΩ.

CONEXIONES:

CALIBRACIÓN DE FI DE VIDEO (continuación)

2- PREPARACIÓN

- 2.1- Conectar el cable de salida del generador de barrido con positivo en **TPE33** y el negativo no tierra.
- 2.2- Conectar el cable del detector de **VIF** con el positivo en **TPE13** y el negativo en tierra.
- 2.3- Conectar la fuente de +9V con el positivo en el pino 3 del **IC851** y el negativo en el tierra.
- 2.4- Conectar la fuente de +4V con el positivo en serie con la resistencia de 1K Ω en el pino 63 del **IC601** y el negativo en el tierra.
- 2.5- Conectar la polarización del AGC con el positivo en el **TPE21** (IF AGC) y el negativo en el tierra.
- 2.6- Entrar en el modo **SERVICIO**.

3- AJUSTES

- 3.1- Calibrar el monitor para 200 mVp-p.
- 3.2- Atenuar la salida del generador de barrido para mínima señal.
- 3.3- Conectar primeramente los instrumentos y despues las fuentes de alimentación.
- 3.4- Ajustar bias AGC para obtener ganancia máxima.
- 3.5- Ajustar la salida del generador de barrido para obtener 200 mVp-p en el monitor.
- 3.6- Aumentar la salida del generador de barrido en 20 dB, y ajustar bias AGC para obtener 200m Vp-p en el monitor.
- 3.7- Confirmar que el nivel de CC (42,17 MHz) y PC (45,75MHz) están dentro de lo especificado en la figura abajo.

AJUSTE DE AFT

1- EQUIPAMIENTOS NECESARIOS

Oscilador CW 45,75 MHz, Detector de VIF, Multímetro Digital y una Puente de cortocircuito.

2- PREPARACIÓN

- 2.1- Desconectar la señal del terminal de la antena.
- 2.2- Conectar el multímetro entre TPE29 y tierra.
- 2.3- Conectar la puente entre TP35 y tierra.
- 2.4- Conectar el oscilador CW a través del detector de VIF entre TPE33 y tierra.
- 2.5- Ajustar la salida del oscilador CW en 90 \pm 5dB μ (75 Ω abierto).
- 2.6- Posicionar el DAC AFT en "80H".

3- AJUSTES

- 3.1- Ajustar AFT a través de la bobina L167 hasta obtener la tensión abajo (*) en el TPE29.
 (*) 4,0 \pm 1,0V (después de 10 segundos)
 (*) 4,5 \pm 1,0V (después del calentamiento)
- 3.2- Variar la frecuencia del oscilador CW entre \pm 100KHz y verificar si la variación de tensión en el multímetro es mayor que \pm 1,2V.

AJUSTE DEL AGC DE RF

1- EQUIPAMIENTOS NECESARIOS

Multímetro Digital y Atenuador.

2- PREPARACIÓN

- 2.1- Sintonizar el padrón BARRAS.
- 2.2- Ajustar el nivel de la señal de entrada para 64 \pm 2 dB (75 Ω abierto).
- 2.3- Conectar el Multímetro digital entre TPE23 y tierra.

3- AJUSTES

- 3.1- Seleccionar DAC AGC RF (RF) CHQ 4 en el modo **SERVICIO**.
- 3.2- Ajustar el DAC a través de las teclas VOL(+) o VOL(-) hasta \pm 6,2V en TPE23.

AJUSTE DEL NIVEL DE ZUMBIDO

1- EQUIPAMIENTOS NECESARIOS.

Osciloscopio y Filtro de 7KHz

2- PREPARACIÓN

- 2.1- Sintonizar padrón BARRAS (sin modulación de sonido).
- 2.2- Posicionar el control de tonalidad en el centro.
- 2.3- Posicionar el control de **VOLUMEN** en el máximo.
- 2.4- Conectar el osciloscopio en los terminales del parlante.

3- VERIFICACIÓN

- 3.1- La amplitud máxima de la señal de zumbido debe ser menor que 1,5Vp-p.
- 3.2- Quando sea mayor que 1,5Vp-p, conectar el filtro de 7KHz en los terminales del parlante y verificar que el nivel de zumbido es menor que 0,5Vp-p.

AJUSTE DEL VÍDEO OUT

1- EQUIPAMIENTOS NECESARIOS

Osciloscopio y Atenuador.

2- PREPARACIÓN

- 2.1- Sintonizar el padrón BARRAS.
- 2.2- Ajustar el nivel de la señal de entrada para 75dB(75Ωabierto).
- 2.3- Conectar la punta de prueba del osciloscopio en el TPE11.

3- AJUSTES

- 3.1- Seleccionar DAC VÍDEO (VID) CHQ4 en el modo SERVICIO
- 3.2- Ajustar a través de las teclas VOL(+) o VOL(−) el nivel de la señal de video en $1,0 \pm 0,05$ Vp-p.

AJUSTE DEL SUB-CONTRASTE

1- EQUIPAMIENTOS NECESARIOS

Osciloscopio, Puente de cortocircuito y Atenuador .

2- PREPARACIÓN

- 2.1- Sintonizar padrón BARRAS.
- 2.2- Ajustar el nivel de la señal de entrada en 75dB(75Ωabierto).
- 2.3- Conectar la puente entre TPE3 y tierra.
- 2.4- Conectar la punta de prueba del osciloscopio entre TPE27 y tierra.
- 2.5- Confirmar si el Picture Menú está en “DINÁMICO”.
- 2.6- Posicionar los controles en las siguientes posiciones:
 G LOW LIGHT (G-CUT)....125H
 BRILLO.....CENTRO
 CONTRASTE.....NORMAL O MÁXIMO
 COR.....MÍNIMO

3- CALIBRACIÓN

- 3.1- Seleccionar DAC SUB-BRILIO (SUB BR) CHQ2.
- 3.2- Ajustar **SUB BR** para que el nivel del pedestal quede en $2,2 \pm 0,1$ Vp-p y certificarse que no hay deformación en la forma de onda.
- 3.3- Seleccionar DAC SUB-CONTRASTE, CHQ2.
- 3.4- Ajustar **SUB-CONTRASTE** para que el nivel de $2,9 \pm 0,1$ Vp-p en TPE27 quede conforme la figura abajo:

AJUSTE DE LA SATURACIÓN

1- EQUIPAMIENTOS NECESARIOS

Osciloscopio y Puente de cortocircuito

2- PREPARACIÓN

- 2.1- Sintonizar padrón BARRAS PAL-M.
- 2.2- Ajustar el nivel de la señal de entrada para 75dB(75Ωabierto).
- 2.3- Confirmar que el Picture Menú está en “DINÁMICO”.
- 2.4- Confirmar que Color por Canal está en “NORMAL”.
- 2.5- Confirmar que la Temperatura de Color está en “NORMAL”.
- 2.6- Conectar el osciloscopio entre TPE27 y tierra.
- 2.7- Conectar la puente entre TPE3 y tierra.
- 2.8- Posicionar los controles en las siguientes posiciones:
 G LOW LIGHT (G-CUT)....125H
 BRILHO.....NORMAL o CENTRO
 CONTRASTE.....NORMAL o MÁXIMO
 COR.....NORMAL o CENTRO

3- AJUSTES

- 3.1- seleccionar DAC SUB-BRILHO en CHQ2.
- 3.2- Ajustar el SUB BRILLO para que el nivel del pedestal quede $2,2 \pm 0,1$ Vp-p y certificarse de que no hay deformación en la forma de onda.
- 3.3- Seleccionar DAC SUB-COR em CHQ2.
- 3.4- Ajustar el SUB-COR para el nivel de $2,5 \pm 0,1$ Vp-p en TPE27, conforme indicado en la figura abajo:

AJUSTE DE SUB-NITIDEZ Y NITIDEZ

1- PREPARACIÓN

- 1.1- Seleccionar el control de NITIDEZ a través del Menú IMAGEN.
- 1.2- Ajustar el control de NITIDEZ para el centro

2- AJUSTES

- 2.1- Seleccionar DAC SUB-NITIDEZ en CHQ2.
- 2.2- Por el control remoto, ajuste SUB NITIDEZ conforme el CRT del TV:
 TRC de 14 pulgadas = 17H
 TRC de 20 pulgadas = 1BH
- 2.3- Pressionar la tecla “N” para salir del modo SERVICIO.

CONFIRMACIÓN DEL CIRCUITO DE SHUT-DOWN

1- EQUIPAMIENTOS NECESARIOS.

Fuente de alimentación DC y Voltímetro.

2- PREPARACIÓN

- 2.1- Sintonizar patrón CROSS HATCH
- 2.2- Ajustar los controles de BRILLO y CONTRASTE para que la corriente del haz sea cero.

3- CONFIRMACIÓN

- 3.1- Conectar el voltímetro DC en el cátodo del D591 y confirmar que la tensión es menor que el nivel (*)A.
- 3.2- Ajuste la fuente DC para el nivel (*)B y certifique que el SHUTDOWN no actúa.
- 3.3- Ajuste la fuente DC para el nivel (*)C y certifique que el SHUTDOWN no actúa.

| NIVELES | 14 PULGADAS (V) | 20 PULGADAS (V) |
|---------|-----------------|-----------------|
| (*)A | 21,60 | 22,30 |
| (*)B | 23,60 | 24,10 |
| (*)C | 25,60 | 26,10 |

AJUSTE DE CENTRO HORIZONTAL (HC) Y LARGURA HORIZONTAL

1- AJUSTE DA CENTRALIZACIÓN HORIZONTAL

- 1.1- Posicionar el control de BRILLO en el mínimo.
- 1.2- Sintonizar el patrón PHILIPS.
- 1.3- Seleccionar el DAC CENTRALIZACIÓN HORIZONTAL (HC) en el CHQ3 modo SERVICIO.
- 1.4- Ajustar la centralización horizontal utilizando las teclas VOL(+) o VOL(-).

2- VERIFICACIÓN DE LA ANCHURA HORIZONTAL

- 2.1- Verificar si la anchura horizontal, está dentro de la especificación abajo:

| DIÁMETRO "A" | MODELO |
|--------------|-------------|
| 290 ± 5 mm | 20 pulgadas |
| 200 ± 5 mm | 14 pulgadas |

AJUSTE DE LA ALTURA VERTICAL Y CENTRALIZACIÓN VERTICAL

1- AJUSTES

- 1.1- Sintonizar patrón PHILIPS.
- 1.2- Seleccionar el DAC CENTRALIZACIÓN VERTICAL (HC) en el CHQ3 modo SERVICIO.
- 1.3- Ajustar el posicionamiento vertical presionando las teclas VOL(+) o VOL(-) de modo que la imagen quede en el centro. (**Sugerión:** la línea del centro do CRT debe coincidir con la línea del centro de la circunferencia del patrón PHILIPS).
- 1.4- Seleccionar el DAC ALTURA VERTICAL (V ALT) en el CHQ3 en el modo SERVICIO.
- 1.5- Ajustar la altura correcta presionando VOL(+) o VOL(-).

PRE AJUSTE DEL WHITE BALANCE Y AJUSTE DEL CUT OFF DEL CRT

NOTA: Debe ser hecho después de 15 minutos de calentamiento.

1- INSTRUMENTO NECESARIO

Osciloscópio

2- PREPARACIÓN

- 2.1- Conectar el osciloscopio entre TPY1 (Q352-C) y tierra.
- 2.2- Sintonizar el patrón PHILIPS.
- 2.3- Confirmar Picture Menú en "DINÁMICO"
- 2.4- Confirmar Color por Canal en "NORMAL".
- 2.5- Confirmar Temperatura de Color en "NORMAL".
- 2.6- Entrar en el modo "SERVICIO" en el CHQ5.
- 2.7- Posicionar los controles en las siguientes posiciones:
 - R HIGH LIGHT (R - DR) 40H
 - B HIGH LIGHT (B - DR) 40H
 - R LOW LIGHT (R - CUT) 000H
 - B LOW LIGHT (B - CUT) 000H
 - G LOW LIGHT (G - CUT) 125H
 - SCREEN MÍNIMO

3- AJUSTES

- 3.1- Presionar la tecla "5" en el control remoto para obtener la línea horizontal simple.
- 3.2- Confirmar que el valor del pedestal en el pino TPE27 es de $2,2 \pm 0,1$ Vp-p.
- 3.3- Ajustar G-CUT para obtener en el TPY1 (*A), conforme la figura abajo:

- 3.4- Ajustar el SCREEN hasta la primera línea aparecer en la tela.
- 3.5- Ajustar los otros DAC's correspondientes a los otros dos colores (R-CUT, B-CUT) hasta tornar la línea blanca.
- 3.6- Salir para el modo normal presionando **NORMAL** en el control remoto.

AJUSTE DEL FOCO

1- PREPARACIÓN

- 1.1- Sintonizar padrón MONOSCOPE o PHILIPS.
- 1.2- Confirmar Picture Menu en DINÁMICO NORMAL.
- 1.3- Ajustar los controles en las siguientes posiciones:
 CONTRASTE.....MÁXIMO
 BRILLO.....NORMAL
NOTA: EL AJUSTE DE SUB-BRILLO YA DEBE HABER SIDO EFECTUADO.

2- AJUSTES

- 2.1- Ajustar el potenciómetro de FOCO (FBT) hasta obtener la mejor focalización de la imagen.

CHEQUEO DE FUNCIONAMIENTO DEL PANEL FRONTAL

1- VERIFICACIÓN DEL TV/AV

- 1.1- Sintonizar el padrón PHILIPS
- 1.2- Presionar la tecla **TV/AV** y verificar si el “**AV**” aparece en el ON SCREEN.

2- VERIFICACIÓN DEL VOLUMEN

- 2.1- Presionar VOL(+) o VOL(–) e constatar que la variación es suave.
- 2.2- Confirmar que la indicación de la posición del volumen cambia suavemente en el ON SCREEN.

3- CONFIRMACIÓN DE LA FUNCIÓN ENCIENDE/APAGA DE LA LLAVE DE RED

- 3.1- Posicionar la llave de red en la posición APAGA y llavear para la posición ENCIENDE. Confirmar que la última posición de memoria es mantenida, (aparece el padrón PHILIPS).
- 3.2- Confirmar también que el volumen está en el mínimo y los otros controles, están en la condición de ajuste final.
- 3.3- Verificar también que el LED esté encendido.

POSICIÓN FINAL DE LOS CONTROLES

VOLUMEMÍNIMO
 CORCENTRO
 BRILLOCENTRO
 CONTRASTEMÁXIMO

4- CHEQUEO DEL MICROPROCESADOR

- 4.1- Presionar Las teclas de selección CH(+) o CH(–) y confirmar que el ON-SCREEN del número de canales cambia entre los canales previamente sintonizados, en el sentido creciente y decreciente.

5- FUNCIONAMIENTO DEL STAND BY

- 5.1- Encender la TV por la llave ENCIENDE/APAGA.
- 5.2- Presione ENCIENDE/APAGA en el control remoto para entrar en “STAND BY”.
- 5.3- Desconecte y reconecte el cordón de fuerza de la red.
- 5.4- Confirmar que el TV está en “**STAND BY**”.
- 5.5- Presione CH(+) o CH(–) en el control remoto y verifique si el TV enciende.

6- VERIFICACIÓN DEL BOTÓN DE FUNCIÓN

- 6.1- Presione el botón **FUNC** en el panel del TV y verifique si aparece la siguiente secuencia:

| | |
|-------------------------|--------------|
| SINT. AUTOMÁTICA | |
| SALTAR CANAL | APAGA |
| ANTENA | TV |

7- CONFIRMACIÓN DEL MODO HOTEL

- 7.1- Ajustar el Volumen para la posición 15.
- 7.2- Entrar en el modo Hotel. Para entrar en el modo hotel posicionar el Off Timer en 30, presionar simultáneamente las teclas CH(+) en el TV y RECALL en el control remoto.
- 7.3- Confirmar que la tecla MAIN MENU y Off Timer não operan.
- 7.4- Confirmar que el máximo volumen es 15.
- 7.5- Salir del modo Hotel. Para salir del modo hotel presionar simultáneamente las teclas VOL(–) en el TV y Off Timer en el control remoto.
- 7.6- Confirmar que el Off Timer opera normalmente.

VERIFICACIÓN DE FUNCIONAMIENTO DE LOS TERMINALES DE ENTRADA AV

1- INSTRUMENTOS UTILIZADOS.

Generador de señal padrón TV.

2- PREPARACIÓN

- 2.1- El ajuste de color ya debe haber sido realizado.
- 2.2- Colocar la tecla **TV/AV** en la posición **AV**.

3- CONFIRMACIÓN

- 3.1- Confirmar que “**AV**” aparece en el ON SCREEN.
- 3.2- Confirmar que desaparecen la imagen y el sonido (confirmación del CROSS TALK).
- 3.3- Conectar el generador de señal padrón en los terminales de entrada AV en la parte de atrás del TV, y confirmar el apareamiento de imagen y sonido.
- 3.4- Conectar otra fuente en el terminal de entrada **AV** frontal y confirmar que la señal padrón conectado en la entrada AV en la parte de atrás del TV fue substituída por la señal del AV frontal.
- 3.5- Colocar la tecla de selección TV/AV para la posición TV.

VERIFICACIÓN DEL FUNCIONAMIENTO DE LA MEMORIZACIÓN AUTOMÁTICA Y MANUAL

1- VERIFICACIÓN DEL FUNCIONAMIENTO DE LA MEMORIZACIÓN AUTOMÁTICA

- 1.1- Ajustar el nivel de señal de entrada del padrón para 40 dB (75Ω abierto).
- 1.2- Presionar la tecla **FUNC** en el panel del TV, aparecerá la indicación **SINTONÍA AUTOMÁTICA**. Presionar la tecla VOL(+) en el TV para iniciar la memorización automática.
- 1.3- Verificar los siguientes ítemes:
 - Mudanza de canales.
 - Sintonía Automática.
- 1.4- Cuando el proceso de memorización esté terminado, apagar el TV a través de la llave Enciende/Apaga.
- 1.5- Enciender el TV nuevamente a través de la llave Enciende/Apaga y verificar los canales memorizados accionandose las teclas CH(+) o CH(-).

2- VERIFICACIÓN DEL FUNCIONAMIENTO DE LA MEMORIZACIÓN MANUAL.

- 2.1- Presionar la tecla **FUNC** en el panel del TV, hasta seleccionar la indicación **SALTAR CANAL**.
- 2.2- Para añadir un canal presione las teclas VOL(+) o VOL(-) en el TV hasta aparecer **APAGADO**.
- 2.3- Para eliminar un canal presione las teclas VOL(+) o VOL(-) en el TV, hasta aparecer **ENCENDIDO**.
- 2.4- Para cambiar de canal presione las teclas CH(+) o CH(-).

VERIFICACIÓN DE LA SINTONÍA DE CANALES

1- PREPARACIÓN

- 1.1- Encender el TV a través de la llave Enciende/Apaga.

2- VERIFICACIÓN

- 2.1- Conectar señal en el TV.
- 2.2- Digitar cualquier número de canal existente que está siendo aplicado en el TV, por el control remoto, y verificar si el canal es seleccionado.
- 2.3- Verificar en las fajas VHF LOW, VHF HIGH, UHF y CATV.

CHEQUEO DEL SONIDO

1- CONFIRMACIÓN DE TONO Y VOLUMEN

- 1.1- Sintonizar un padrón con sonido.
- 1.2- Confirmar que la alta frecuencia del sonido es alterada cuando el nivel del Tono es variado en el MENU de SONIDO.
- 1.3- Presionar las teclas VOL(+) o VOL(-) en el control remoto y constatar que la variación es suave.

2- CONFIRMACIÓN DEL NOISE MUTE Y DEL BLUE-BACK.

- 2.1- Sintonizar padrón PHILIPS o gerador.
- 2.2- Accionar el BLUE-BACK en el Menu Funciones. Confirmar si la salida de sonido del padrón PHILIPS está normal.
- 2.3- Retirar la señal de la antena o disminuir el nivel de la señal. Confirmar si aparece la tela azul y si el sonido es cortado.
- 2.4- Desactivar el BLUE-BACK en el Menu Funciones. Verificar si no aparece la tela azul y si existe sonido o ruido.
- 2.5- Accionar nuevamente el BLUE-BACK en el Menu Funciones.

AJUSTE DE PUREZA Y CONVERGENCIA

El ajuste será necesario cuando el yoke de deflexión o el CRT fueren sustituidos, o cuando la convergencia o la pureza estuvieren desajustadas.

1. Cuando el CRT o el Yoke fueren sustituidos

- 1.1 Coloque el yoke de deflexión y el anillo de convergencia en el cuello del CRT.
- 1.2 Para posicionar el anillo de convergencia observe la figura abajo.

- 1.3 Encienda el aparato y sintonice un padrón rojo.
- 1.4 Posicione la bobina deflectora para obtenerse un rojo uniforme en la tela.
- 1.5 Entre en el modo de servicio (pág. 10) y presione RECALL en el controle remoto para iniciar el modo de ajuste de pureza.
- 1.6 Deje el aparato calentarse por 30 minutos en la tela blanca.

2- Ajuste inicial de convergencia estática (centro)

- 2.1 Conecte el generador de crosshatch (ajedrez) y verifique la convergencia en el centro de la tela.
- 2.2 Ajuste los anillos 3 y 4 (4 polo) dislocando o rotacionando para sobreponer el rojo al azul.
- 2.3 Ajuste los anillos 5 y 6 (6 polo) dislocando o rotacionando para sobreponer el rojo y el azul al verde.

3- Ajuste de Pureza

- 3.1 Posicione el aparato con la tela girada para el este.
- 3.2 Desmagnetice la cara del CRT con un desmagnetizador.
- 3.3 Presione RECALL en el control remoto hasta la tela colocarse roja.
- 3.4 Aparte la bobina deflectora y ajuste los anillos 1 y 2 de manera que la porción roja quede exactamente en el centro, en proporción igual para la azul y la verde como en la figura abajo.

- 3.5 Lentamente, mueva la bobina deflectora hacia el frente hasta obtener rojo en toda la tela.
- 3.6 Fije la bobina deflectora.
- 3.7 Mantenga presionada la tecla RECALL en el control remoto y verifique la pureza en los colores verde, azul y blanco. Si es necesario repita el procedimiento de ajuste de pureza.

4- Ajuste de convergencia estática

- 4.1 Sintonice el padrón crosshatch.
- 4.2 Sobreponga el trazo rojo al trazo azul ajustando los anillos 3 y 4 (ajuste el centro).

- 4.3 Sobreponga los trazos rojo y azul al verde ajustando los anillos 5 y 6 (ajuste el centro).

5- Ajuste de convergencia dinámica

- 5.1 Dislocar el DY en el sentido horizontal y vertical simultáneamente, para obtener una perfecta sobreposición de los colores laterales.
- 5.2 Ajustar la posición del DY para que la imagen quede simétrica en relación a la geometría de la tela.
- 5.3 Colocar calzos (cuñas) de goma para fijar el DY. Mantenga un ángulo de 120° entre cada calzo.
- 5.4 Se fuera necesario, usar permalloy para corregir convergencia en los cantos.

Confiriendo el ajuste de pureza con auxilio de microscopio

- 1- Sintonice um padrón blanco
- 2- Utilizando un microscopio, observe el pixel en el centro de la tela y compare con la figura abajo. Para se obtener un pixel con el formato correcto, ajuste los anillos de pureza.

- 3- Utilizando un microscopio, observe el pixel en las laterales de la tela y compare con la figura abajo. Para se obtener un pixel con el formato correcto, ajuste la bobina deflectora moviéndola para adelante o para atrás.

Panasonic do Brasil Ltda.

GRUPO CS - APOYO TÉCNICO

Rod. Presidente Dutra, Km 155
São José dos Campos - SP
