# CHASSIS BOTTOM VIEW

# ALIGNMENT PROCEDURE

## TEST EQUIPMENT REQUIRED

The following are needed to Completely test and align KA-4000.

- \* Vacuum-Tube Voltohmmeter (100 mV DC scale)
- \* Audio Vacuum-Tube Voltmeter
- \* Oscilloscope (Flat to 100kHz Minimum)
- \* Audio (Sine-wave) Generator
- \* Intermodulation Distortion Analyzer
- \* Harmonic Distortion Analyzer
- \* Line Voltage Autotransformer or Voltage Regulator
- \* 2-Load Resistors, 4 or 8 ohm, 80 Watts
- \* 2-Full Range Speakers for Listening Tests
- \* Stereo Source-Turntable or Tape Recorder for Listening Tests
- \* Soldering Iron with Small Tip Fully Insulated from Power Line

## ADJUSTING THE EQUALIZERS

### PHONO (RIAA) PRE AMP BLOCK (UA1342K)

With the input at PHONO 1 LEFT-CH (RIGHT-CH), set the selector at PHONO 1.

With the output at TAPE REC LEFT-CH (RIGHT-CH), set main VR to zero (0).

Adjust input level at input frequency of 1000 Hz.

Then set output at 316 mV. Assuming the value at this point to be 0 dB, switch the input frequency to 30 Hz and set LEFT-CH/VR504 (RIGHT-CH/VR503) to +18.6 dB.

### TAPE HD (NAB) PRE AMP BLOCK (UA1342K)

Place input to TAPE HD LEFT-CH (RIGHT-CH) and set selector to TAPE HD.

With output at TAPE REC LEFT-CH (RIGHT-CH), set main VR to zero (0).

Adjust input level at input frequency of 1000 Hz and set output to 316 mV.

At this point where the value is 0 dB, switch the input frequency to 10 kHz and set LEFT-CH/VR502 (RIGHT-CH/VR501) to -10.0 dB.

## ADJUSTING THE CENTER VOLTAGE

Connect DC voltmeter to capacitor C15/LEFT-CH (C16/RIGHT-CH), across the positive terminal (2,200 $\mu$ F) and the grounding.

Adjust the VR904/LEFT-CH (VR903/RIGHT-CH) of MAIN AMP BLOCK "UA1349K1" to 34 V.

## ALIGNMENT PROCEDURE

### ADJUSTING THE CURRENT WITHOUT SIGNAL

Without input and AC power supply remove plug A. Then Connect 3 and 4 of jack A and Connect a DC ammeter of 100 mA range across these terminals and 1 (RIGHT-CH) and 2 (LEFT-CH). Increase AC power gradually from 0 V. Making sure that the needle of the ammeter does not

swing fullscale, adjust the VR906/LEFT-CH (VR905/RIGHT-CH) of the MAIN AMP BLOCK "UA1349K1" to set the reading at 30 mA when it is AC 117 V. However, in this case be sure to allow 3 minutes aging and to reset to guard against fluctuation in current.

### PROTECTION ADJUSTMENT PROCEDURES

With an input at AUX, selector switch at AUX, mode switch at STEREO VR MAX, TONE at FLAT, each lever switch at normal, and the connected load to be 4 ohm, gradually increase the input of 1 kHz until the waveforms are clipped, while observing the waveform with the oscilloscope.

At this point, set VR902 in case of UA1349K1 LEFT-CH and VR901 in case of RIGHT-CH so that the waveforms

show fluctuation.

For the sake of good order, repeat lowering and increasing the input to make sure whether any fluctuation is noted in the waveforms before or after the clipping points with the contact load changed to 8 ohms.

The waveforms on the oscilloscope should show iterative effect in case the terminals of the load are shortcircuited.

## PROCEDURE FOR REPLACING OUTPUT TRANSISTOR

### Symptoms:

- When there is load hum at the speakers.
- When there is no output at all.
- When you cannot get rated output.

### Replacing Method:

Replace all the four transistors, 2SC 793 (Toshiba) B-170003 (Bendix), 2N3055 (RCA.).

### Adjusting procedures:

Connect dummy load to output terminals, and connect to the oscilloscope input in parallel. Set audio generator at 200 mV, 1000 Hz and connect to the AUX terminals.

Advance the front panel volume control until the sine-wave just begins to clip on the oscilloscope. Adjust DC balance control VR906 (LEFT) or VR905 (RIGHT) on the printed circuit board "UA1349K1" until clipping is symmetrical.

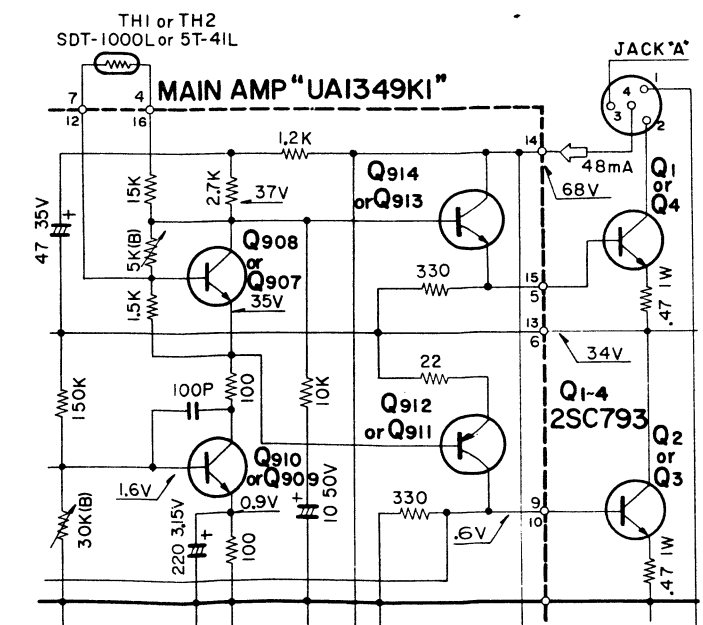

### Testing procedures:

Until replacement is completed, do not operate the set the unit without first testing.

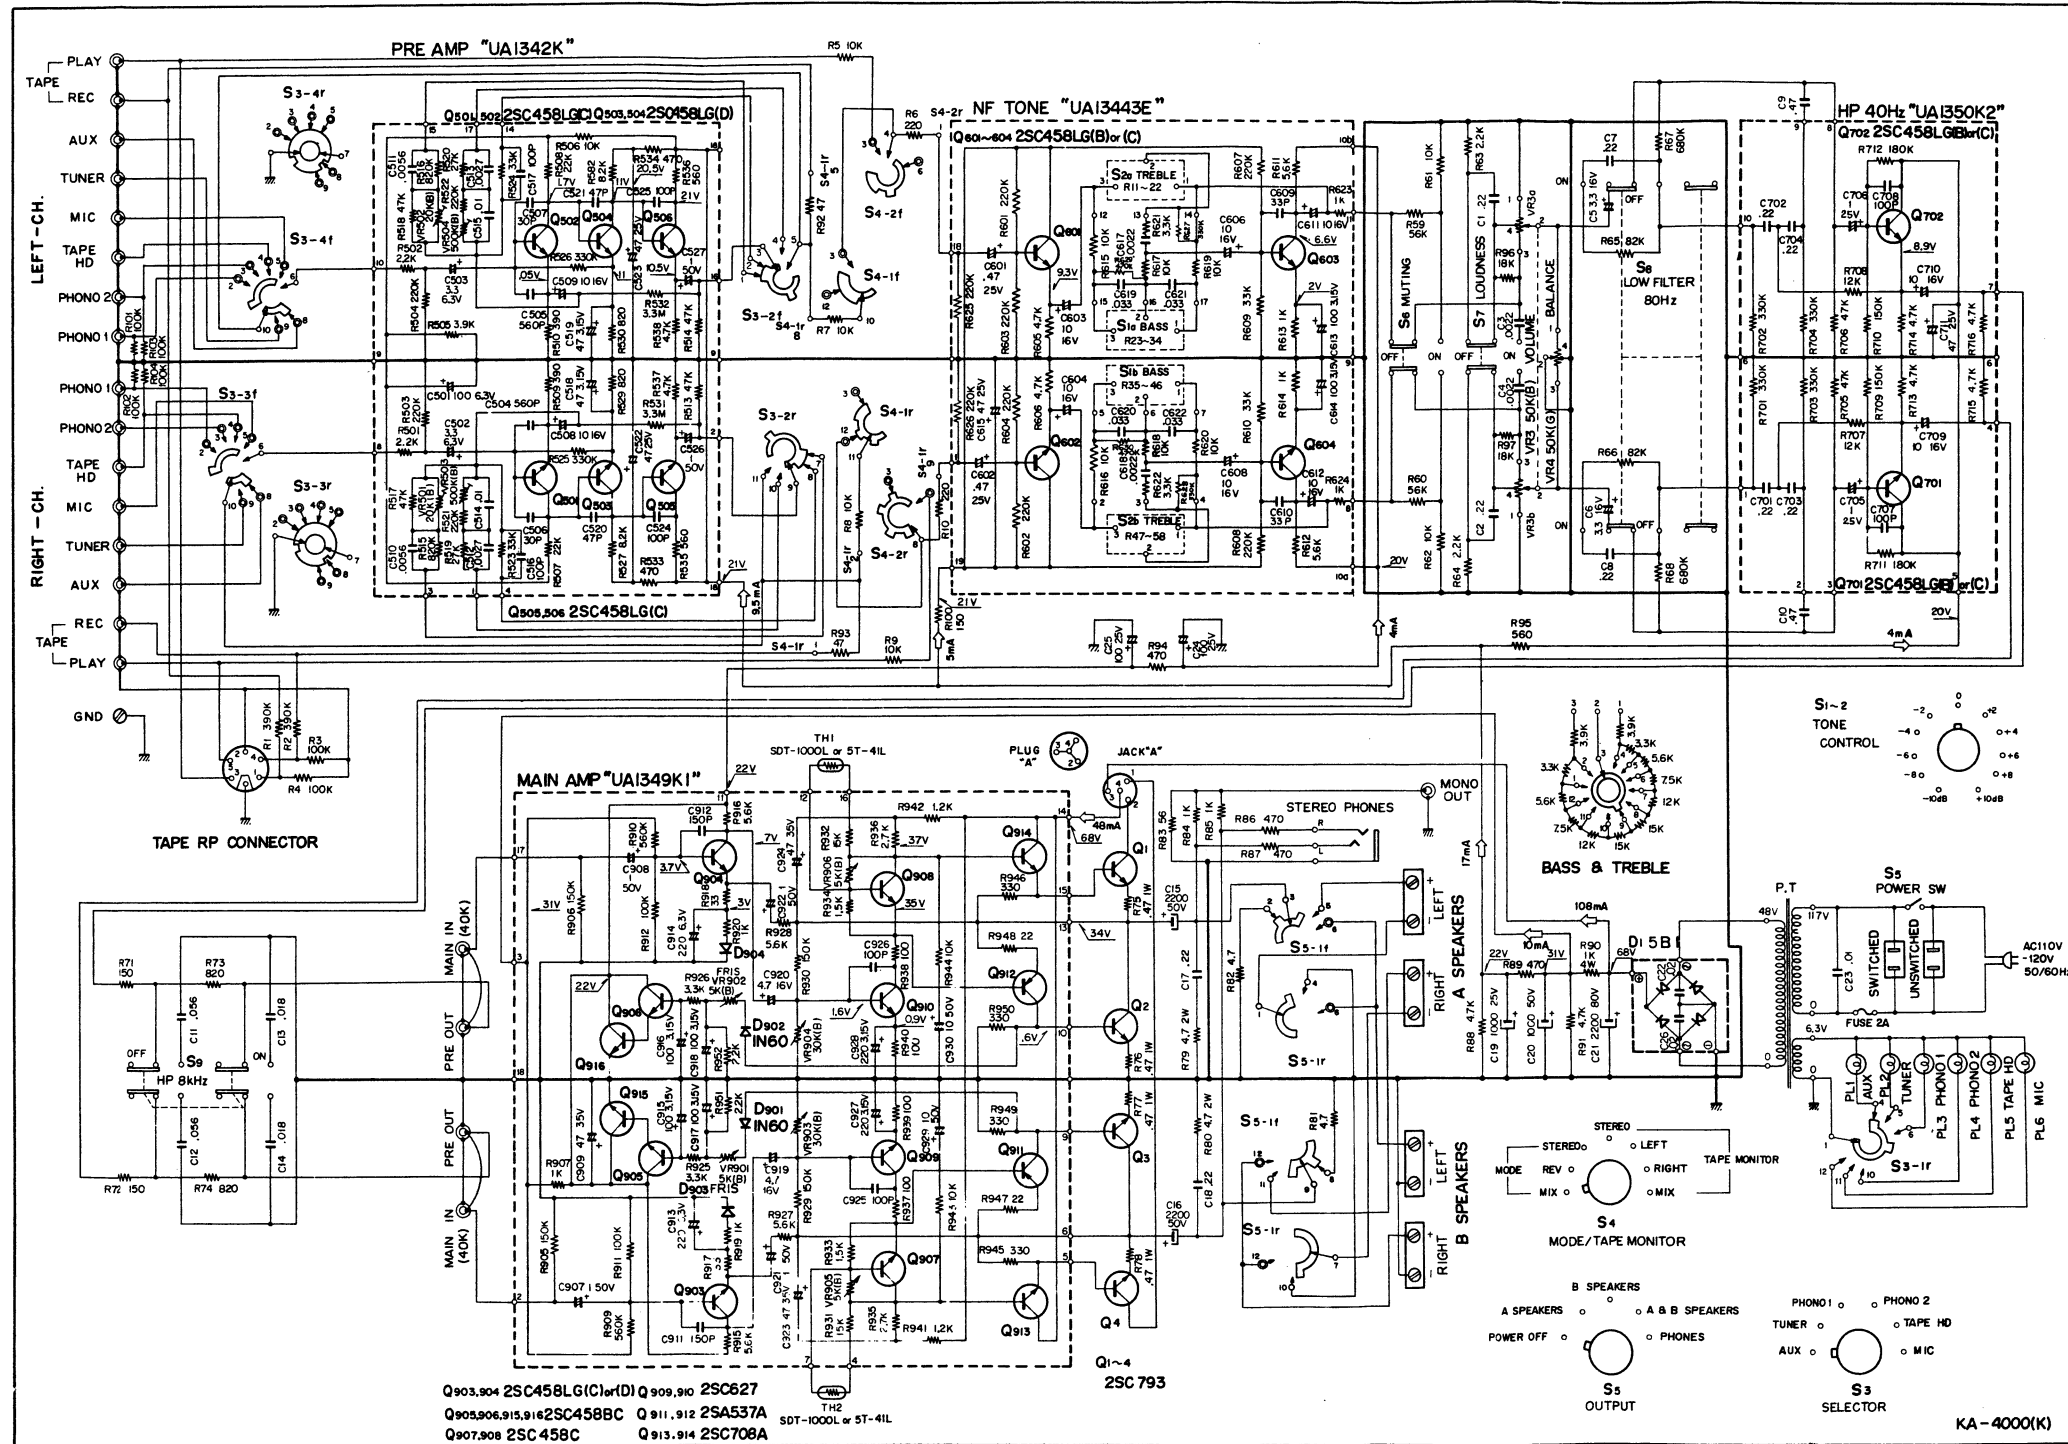

Perform the test according to the following procedures.

- Using variable transformer, lower the AC line voltage to approximately 30 V.
- Using a tester, measure the voltage between the chassis and collector of the power transistor Q2 or Q3. If a tester indicates approximately 34 V, it is normal.
- Also measure the voltage between the chassis and collector of the power transistor Q1 or Q4. If a tester indicates approximately 68 V, it is normal.

R905, 906	Insulated Carbon Film	150kΩ	±10%	1/4W		
R907	Fixed Carbon Composition	1kΩ	±10%	1/2W		
R909, 910	Insulated Carbon Film	560kΩ	±10%	1/4W		
R911, 912	Insulated Carbon Film	100kΩ	±10%	1/4W		
R915, 916	Insulated Carbon Film	5.6kΩ	±10%	1/4W		
R917, 918	Insulated Carbon Film	33Ω	±5%	1/4W		
R919, 920	Insulated Carbon Film	1kΩ	±10%	1/4W		
R925, 926	Fixed Carbon Composition	3.3kΩ	±10%	1/2W		
R927, 928	Insulated Carbon Film	5.6kΩ	±5%	1/4W		
R929, 930	Insulated Carbon Film	150kΩ	±10%	1/4W		
R931, 932	Fixed Carbon Composition	15kΩ	±10%	1/2W		
R933, 934	Fixed Carbon Composition	1.5kΩ	±10%	1/2W		
R935, 936	Fixed Carbon Composition	2.7kΩ	±10%	1/2W		
R937~940	Fixed Carbon Composition	100Ω	±10%	1/2W		
R941, 942	Fixed Carbon Composition	1.2kΩ	±10%	1/2W		
R943, 944	Fixed Carbon Composition	10kΩ	±10%	1/2W		
R945, 946	Fixed Carbon Composition	330Ω	±10%	1/2W		
R947, 948	Fixed Carbon Composition	22Ω	±10%	1/2W		
R949, 950	Fixed Carbon Composition	330Ω	±10%	1/2W		
R951, 952	Fixed Carbon Composition	2.2kΩ	±10%	1/2W		
CAPACITORS						
C907, 908	Electrolytic Tubular	1μF	50WV			
C909	Electrolytic Tubular	47μF	35WV			
C911, 912	Ceramic	150pF	±10%			
C913, 914	Electrolytic Tubular	220μF	6.3WV			
C915~918	Electrolytic Tubular	100μF	3.15WV			
C919, 920	Electrolytic Tubular	4.7μF	16WV			
C921, 922	Electrolytic Tubular	1μF	50WV			
C923, 924	Electrolytic Tubular	47μF	35WV			
C925, 926	Ceramic	100pF	±10%			
C927, 928	Electrolytic Tubular	220μF	3.15WV			
C929, 930	Electrolytic Tubular	10μF	50WV			
POTENTIOMETERS						
VR901, 902	5kΩ	(B)		R10-70		
VR903, 904	30kΩ	(B)		R10-76		
VR905, 906	5kΩ	(B)		R10-70
