

# Service Manual

Personal Facsimile

## KX-FT931LA-B

B: Black Version  
(for Latin America)

### WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

### IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety. These parts are marked by  in the Schematic Diagrams, Circuit Board Diagrams, Exploded Views and Replacements Parts List. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent shock, fire or other hazards. Do not modify the original design without permission of manufacturer.

### IMPORTANT INFORMATION ABOUT LEAD FREE, (PbF), SOLDERING

If lead free solder was used in the manufacture of this product the printed circuit boards will be marked PbF. Standard leaded, (Pb), solder can be used as usual on boards without the PbF mark.

When this mark does appear please read and follow the special instructions described in this manual on the use of PbF and how it might be permissible to use Pb solder during service and repair work.

When you note the serial number, write down all 11 digits. The serial number may be found on the bottom of the unit.

# 1 Safety Precautions

1. Before servicing, unplug the AC power cord to prevent an electric shock.
2. When replacing parts, use only the manufacturer's recommended components.
3. Check the condition of the power cord. Replace if wear or damage is evident.
4. After servicing, be sure to restore the lead dress, insulation barriers, insulation papers, shields, etc.
5. Before returning the serviced equipment to the customer, be sure to perform the following insulation resistance test to prevent the customer from being exposed to shock hazards.

## 1.1. For Service Technicians

ICs and LSIs are vulnerable to static electricity.

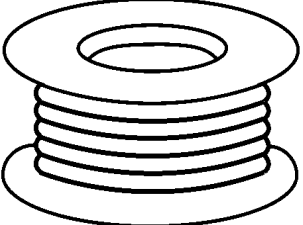

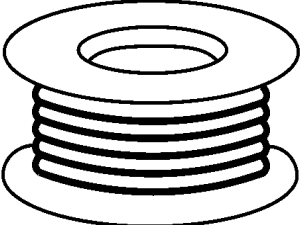

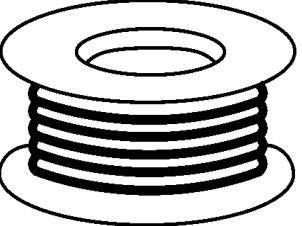

When repairing, the following precautions will help prevent recurring malfunctions.

1. Cover the plastic part's boxes with aluminum foil.
2. Ground the soldering irons.
3. Use a conductive mat on the worktable.
4. Do not touch the IC or LSI pins with bare fingers.

### 1.1.1. Suggested PbF Solder

There are several types of PbF solder available commercially. While this product is manufactured using Tin, Silver, and Copper, (Sn+Ag+Cu), you can also use Tin and Copper, (Sn+Cu), or Tin, Zinc, and Bismuth, (Sn+Zn+Bi). Please check the manufacturer's specific instructions for the melting points of their products and any precautions for using their product with other materials.

The following lead free (PbF) solder wire sizes are recommended for service of this product: 0.3mm, 0.6mm and 1.0mm.

0.3mm X 100g	0.6mm X 100g	1.0mm X 100g
		

### 1.1.2. How to recognize that Pb Free Solder is Used

P.C.Boards marked as "PbF" use Pb Free solder. (See the figure below.)

(Example:Digital board)

**Note:** The "PbF" marked may be found on different areas of the same P.C.Board,depending on manufacture date.

### 1.2. AC Caution

For safety, before closing the lower cabinet, please make sure of the following precautions.

1. The earth lead is fixed with the screw.
2. The AC lead is connected properly to power supply unit.
3. Wrap the earth lead around the core 5 times.
4. Wrap the AC lead around the core 5 times.

## 1.3. Personal Safety Precautions

### 1.3.1. Moving Sections of the Unit

Be careful not to let your hair, clothes, fingers, accessories, etc., become caught in any moving sections of the unit.

The moving sections of the unit are the rollers and a gear. There is a separation roller and a document feed roller which are rotated by the document feed motor. A gear rotates the two rollers. Be careful not to touch them with your hands, especially when the unit is operating.

### 1.3.2. Live Electrical Sections

All the electrical sections of the unit supplied with AC power by the AC power cord are live.

Never disassemble the unit for service with the AC power supply plugged in.

**CAUTION:**

AC voltage is supplied to the primary side of the power supply unit. Therefore, always unplug the AC power cord before disassembling for service.

(Bottom View)

## 1.4. Service Precautions

### 1.4.1. Precautions to Prevent Damage from Static Electricity

Electrical charges accumulate on a person. For instance, clothes rubbing together can damage electric elements or change their electrical characteristics. In order to prevent static electricity, touch a metallic part that is grounded to release the static electricity. Never touch the electrical sections such as the power supply unit, etc.

## 2 Warning

### 2.1. About Lead Free Solder (PbF: Pb free)

**Note:**

In the information below, Pb, the symbol for lead in the periodic table of elements, will refer to standard solder or solder that contains lead.

We will use PbF solder when discussing the lead free solder used in our manufacturing process which is made from Tin, (Sn), Silver, (Ag), and Copper, (Cu).

This model, and others like it, manufactured using lead free solder will have PbF stamped on the PCB. For service and repair work we suggest using the same type of solder.

**Caution**

- PbF solder has a melting point that is 50° ~ 70° F, (30° ~ 40°C) higher than Pb solder. Please use a soldering iron with temperature control and adjust it to 700° ± 20° F, (370° ± 10°C).
- Exercise care while using higher temperature soldering irons.: Do not heat the PCB for too long time in order to prevent solder splash or damage to the PCB.
- PbF solder will tend to splash if it is heated much higher than its melting point, approximately 1100°F, (600°C).
- When applying PbF solder to double layered boards, please check the component side for excess which may flow onto the opposite side (See figure, below).

### 2.2. Insulation Resistance Test

- Unplug the power cord and short the two prongs of the plug with a jumper wire.
- Turn on the power switch.
- Measure the resistance value with an ohmmeter between the jumpered AC plug and each exposed metal cabinet part (screw heads, control shafts, bottom frame, etc.).

Note: Some exposed parts may be isolated from the chassis by design. These will read infinity.

- If the measurement is outside the specified limits, there is a possibility of a shock hazard.

### 2.3. Battery Caution

**CAUTION**

Danger of explosion if the battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's Instructions.

The lithium battery is a critical component (type No. CR2032). Please observe for the proper polarity and the exact location when replacing it and soldering the replacement lithium battery in.

### 3 Specifications

<b>Applicable Lines:</b>	Public Switched Telephone Network
<b>Document Size:</b>	Max. 216 mm in width Max. 600 mm in length
<b>Effective Scanning Width:</b>	208 mm
<b>Recording Paper Size:</b>	216 × max. 30 m roll
<b>Effective Printing Width:</b>	208 mm
<b>Transmission Time*<sup>1</sup>:</b>	Approx. 15 s/page (Original mode)* <sup>2</sup>
<b>Scanning Density:</b>	Horizontal: 8 pels/mm Vertical: 3.85 lines/mm - in standard resolution, 7.7 lines/mm - in fine/photo resolution, 15.4 lines/mm - in super fine resolution
<b>Photo resolution:</b>	64-level
<b>Scanner Type:</b>	Contact Image Sensor
<b>Printer Type:</b>	Thermal printing
<b>Data Compression System:</b>	Modified Huffman (MH), Modified READ (MR)
<b>Modem Speed:</b>	9,600 / 7,200 / 4,800 / 2,400 bps; Automatic Fallback
<b>Operating Environment:</b>	5 - 35°C, 20 - 80% RH (Relative Humidity)
<b>Dimensions (H×W×D):</b>	Approx. height 121 mm × width 352 mm × depth 224 mm
<b>Mass (Weight):</b>	Approx. 2.7 kg
<b>Power Consumption:</b>	Standby: Approx. 1.2 W Transmission: Approx. 13 W Reception: Approx. 30 W (When receiving a 20% black document) Copy: Approx. 35 W (When copying a 20% black document) Maximum: Approx. 120 W (When copying a 100% black document)
<b>Power Supply:</b>	120 V AC, 60 Hz
<b>Fax Memory Capacity*<sup>3</sup>:</b>	Approx. 28 pages of memory reception (Based on the ITU-T No. 1 Test Chart in standard resolution, with original mode.)

\* <sup>1</sup> Transmission speed depends upon the contents of the pages, resolution, telephone line conditions and capability of the other party's machine.

\* <sup>2</sup> Transmission speed is based upon the ITU-T No. 1 Test Chart with original mode. If the capability of the other party's machine is inferior to your unit, the transmission time may be longer.

\* <sup>3</sup> If an error occurs during fax reception, such as a paper jam or if the recording paper runs out, the fax and subsequent faxes will be retained in memory.

**Note:**

Design and specifications are subject to change without notice.

## 4 General/Introduction

### 4.1. Optional Accessories

Model No.	Item	Specifications/Usage
KX-A106	Standard thermal recording paper* <sup>1</sup>	216 mm × 30 m roll, with 25 mm core

\*<sup>1</sup> Use only the included or specified recording paper. Using other recording paper may affect print quality and/or cause excessive wear to the thermal head.

### 4.2. Translation Lists

## 5 Features

### 5.1.

#### General

- LCD (Liquid Crystal Display) readout

#### Facsimile

- Automatic document feeder (10 sheets)
- Resolution: Standard/Fine/Photo/Super Fine (64 level)
- Broad cast

#### Integrated Telephone System

- Redialing function
- Phonebook function (100 names)
- Caller ID compatible\*\*

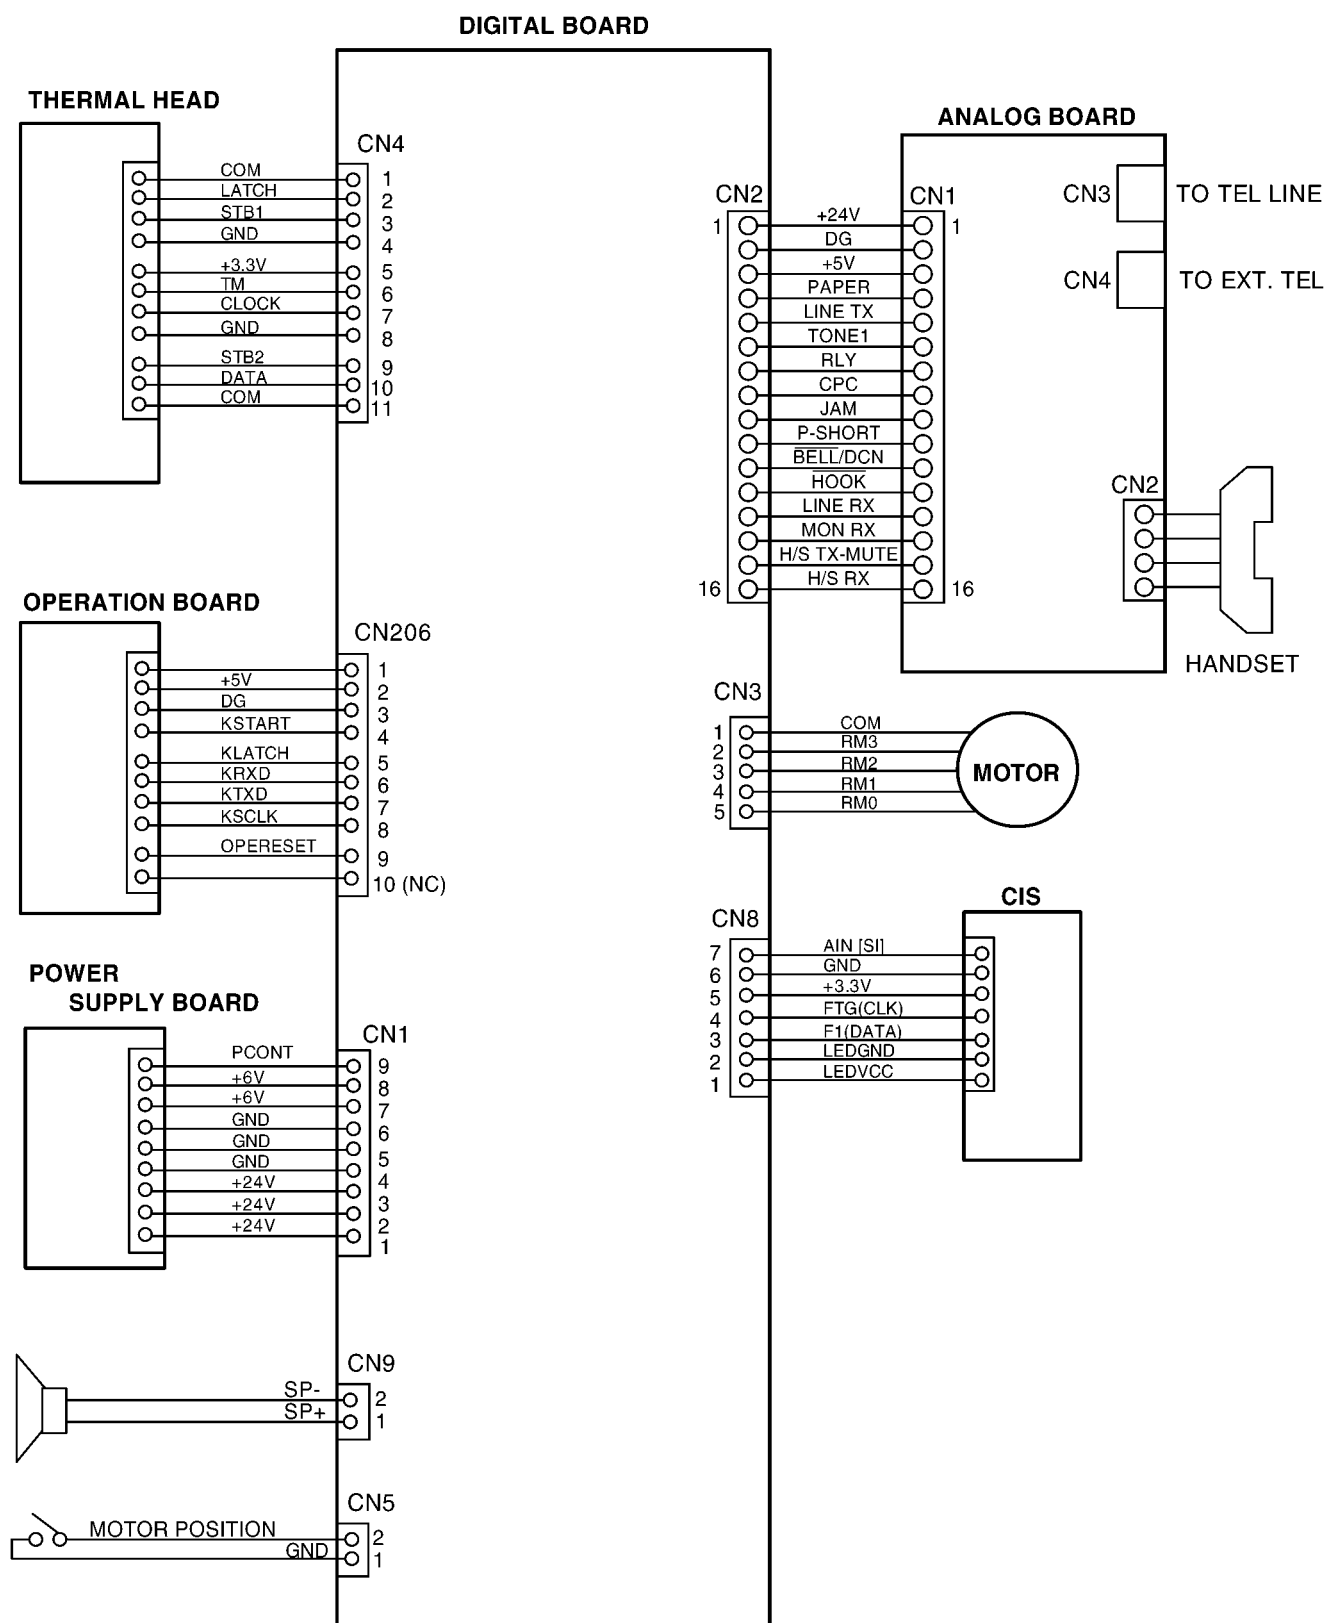

\*\*Feature requires a subscription to caller identification services offered by certain local telephone companies for a fee. You and your caller(s) must be in areas that provide caller identification services, and compatible equipment must be used by both telephone companies. Feature not available when the unit is connected to a PBX system.

#### Enhanced Copier Function

- 64-Level halftone

## 6 Technical Descriptions

### 6.1. Connection Diagram

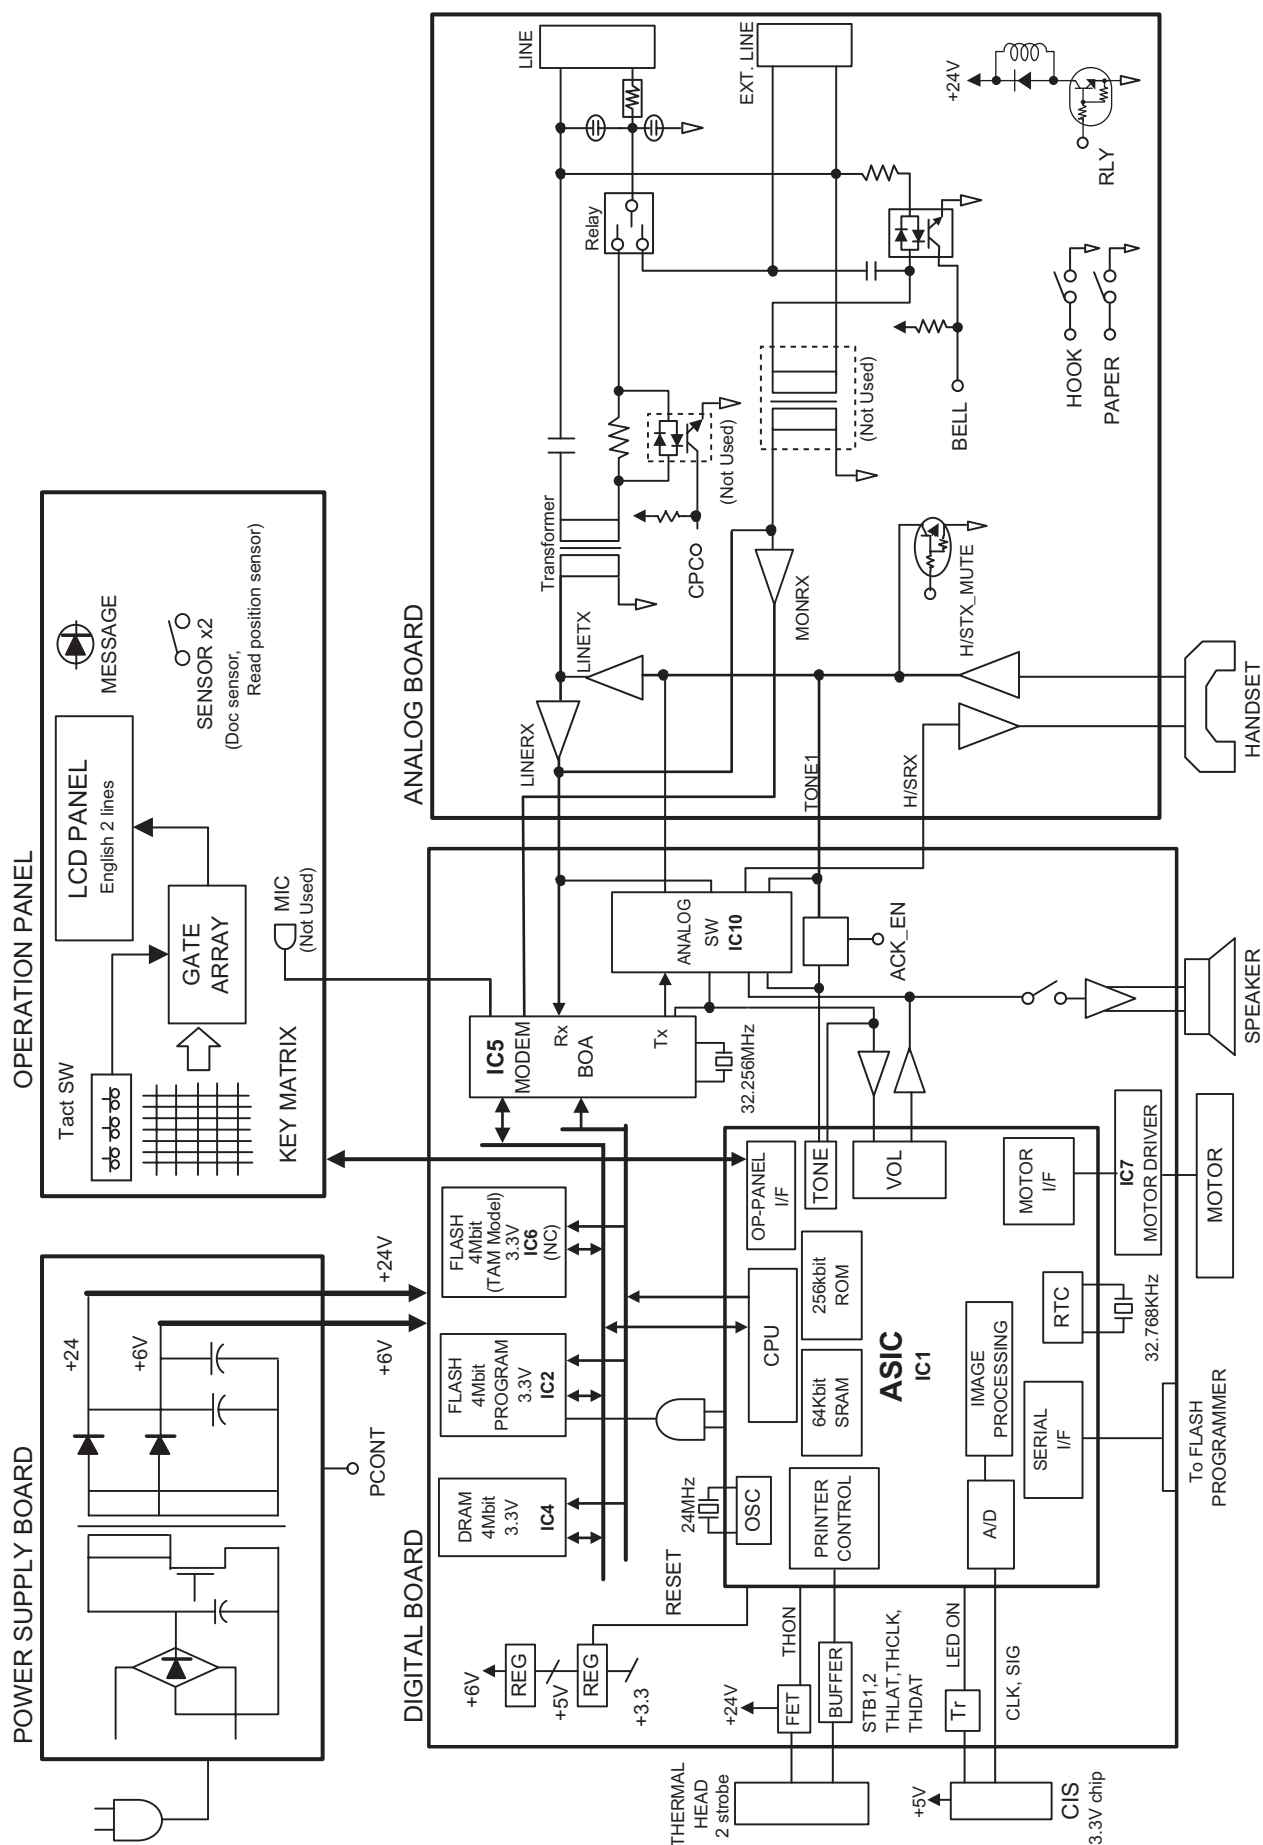

## 6.2. General Block Diagram

The following is an outline of each device IC on the digital board. (Refer to **General Block Diagram** (P.13)).

1. ASIC (IC1)
  - Composed mainly of an address decoder and a modem control.
  - Controls the general FAX operations.
  - Controls the operation panel I/F.
  - Controls the thermal head I/F and CIS I/F.
  - Performs the image processing.
  - CPU and Real time clock
  - Provides the reset pulse for each of the major ICs.
2. Flash ROM (IC2)
  - Contains all of the program instructions on the unit operations.
  - This memory is used mainly for the parameter working in the storage area.
3. Dynamic RAM (IC4)
  - This memory is used mainly for the parameter working in the storage area.
4. MODEM (IC5)
  - Performs the modulation and the demodulation for FAX communication.
5. Read Section
  - CIS image sensor to read transmitted documents.
6. Motor Driver (IC7)
  - Drives the transmission motor and the reception motor.
7. Thermal Head
  - Contains heat-emitting elements for dot matrix image printing.
8. Sensor Section
  - Composed of a cover open and film end switch, a document set switch, a document top switch, a paper top sensor and a motor position switch.
9. Power Supply Board Switching Section
  - Supplies +6V and +24V to the unit.

## 6.2.1. General Block Diagram

## 6.3. Control Section

### 6.3.1. ASIC (IC1)

This custom IC is used for the general FAX operations.

1. CPU:

This model uses a Z80 equivalent to the CPU operating at 12 MHz. Most of the peripheral functions are performed by custom-designed LSIs. Therefore, the CPU only works for processing the results.

2. RTC:

Real Time Clock

3. DECODER:

Decodes the address.

4. ROM/RAM I/F:

Controls the SELECT signal of ROM or RAM and the bank switching.

5. CIS I/F:

Controls the document reading.

6. IMAGE DATA RAM:

This memory is programmed into the ASIC and uses 8

**Note\*:**

This memory is incorporated into the ASIC (IC1) and used for the image processing.

KB for the image processing.

7. THERMAL HEAD I/F:

Transmits the recorded data to the thermal head.

8. MOTOR I/F:

Controls the transmission motor which feeds the document.

Controls the receiving motor which feeds the recording paper.

9. OPERATION PANEL I/F:

Serial interface with Operation Panel.

10. I/O PORT:

I/O Port Interface.

11. ANALOGUE UNIT:

Electronic volume for the monitor.

Sends beep tones, etc.

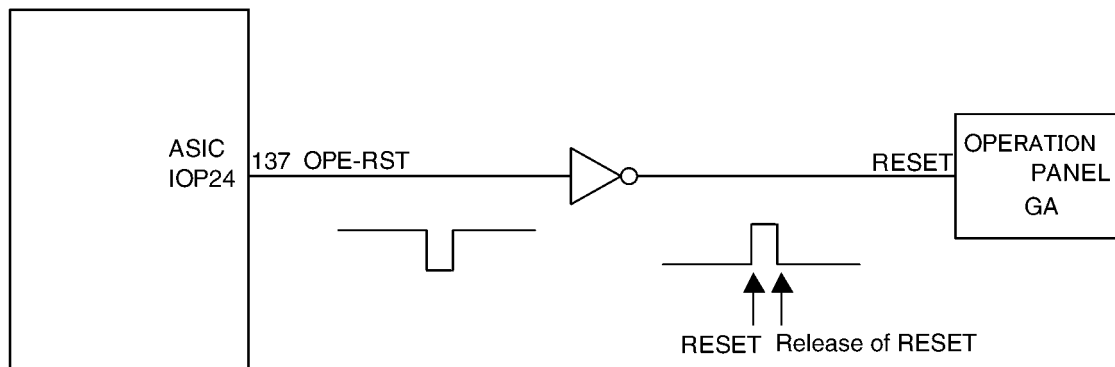

### Descriptions of Pin Distribution (IC1)

143	VREFT	A	3.3V	A/D CONVERTER'S FULL SCALE VOLTAGE OUTPUT
144	VSSA		GND	POWER SOURCE (ANALOG GND)

#### Connection to operation reset circuit

### 6.3.2. Flash Memory (IC2)

This 512KB ROM (FLASH MEMORY) carries a common area of 32KB and bank areas which each have 8KB (BK4~BK63). The addresses from 0000H to 7FFFH are for the common area and from 8000H to 9FFFH are for the bank areas.

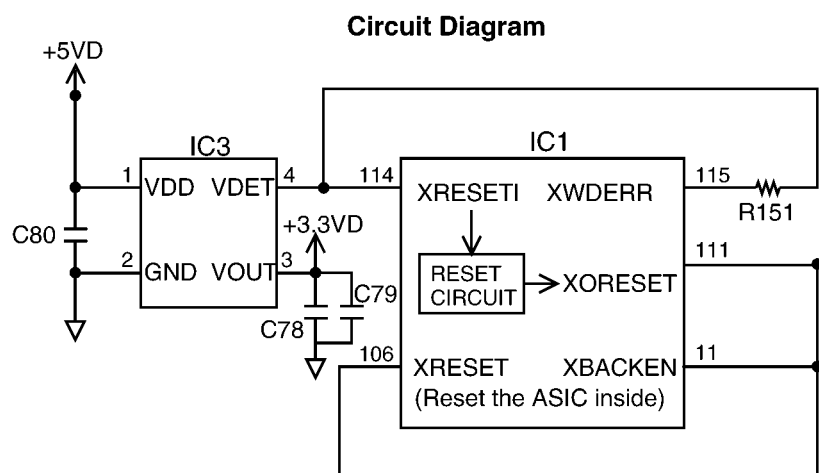

### 6.3.3. Dynamic RAM (IC4)

The DRAM serves as CPU and receives memory.

The address is F200H~F3FFH (DRAM access window 1) and F600H~F7FFH (DRAM access window 2).

### 6.3.4. Reset Circuit (Watch dog timer)

The output signal (reset) from pin 4 of the voltage detect IC (IC3) is input to the ASIC (IC1) 114 pin.

1. During a momentary power interruption, a positive reset pulse of 50~70 msec is generated and the system is reset completely.

2. The watch dog timer, built-in the ASIC (IC1), is initialized by the CPU about every 1.5 ms.  
When a watch dog error occurs, pin 115 of the ASIC (IC1) becomes low level.  
The terminal of the 'WDERR' signal is connected to the reset line, so the 'WDERR' signal works as the reset signal.

### 6.3.5. RTC Back up Circuit

#### 1. Function

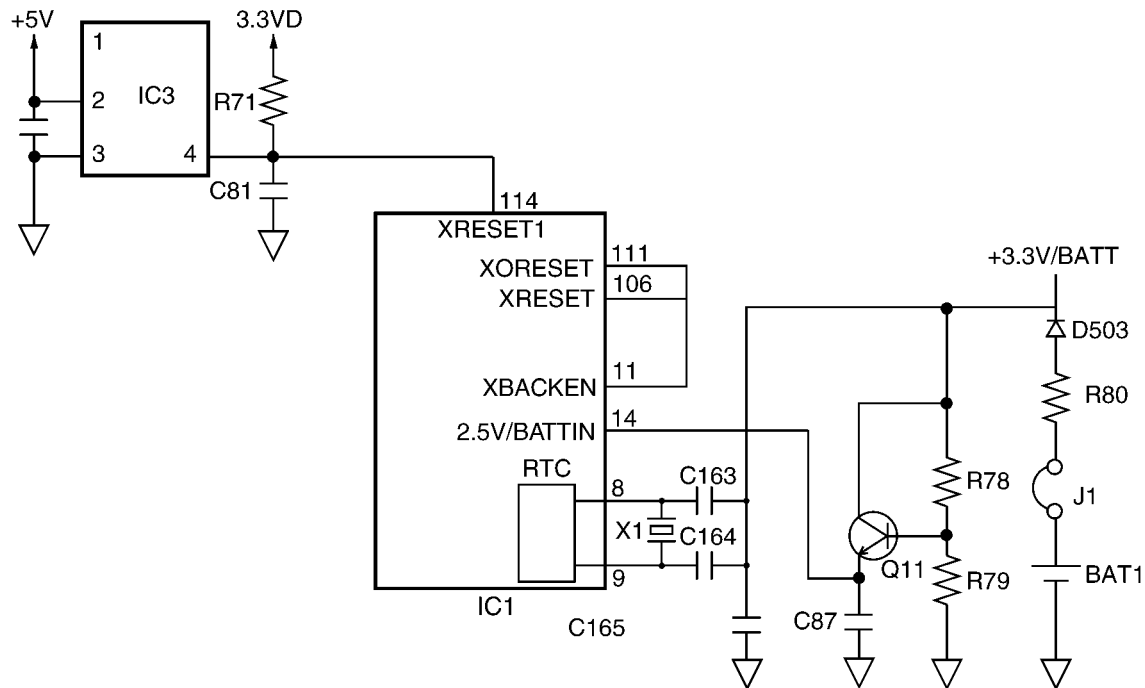

This unit has a lithium battery (BAT1) which works for the Real Time Clock (RTC, Integrated into ASIC:IC1). The RTC continues functioning, even when the power switch is OFF, backed up by a lithium battery.

#### 2. Circuit Operation

When the power is turned ON, power is supplied to RTC (IC1).

At this time, the voltage at pin 14 of RTC (IC1) is +3.3V. When the power is turned OFF, the battery supplies the power to RTC through J1, R80, D503. At that time, the voltage at pin 14 of IC1 are about +2.5V. When the power is OFF and the +5V and +3.3V voltages decrease, the LOW is input to pin 114 of IC1. Pin 111 of IC1 outputs the reset signals. Pin 11 of IC1 become low, then RTC (IC1) go into the back up mode, when the power consumption is lower.

**Circuit Diagram**

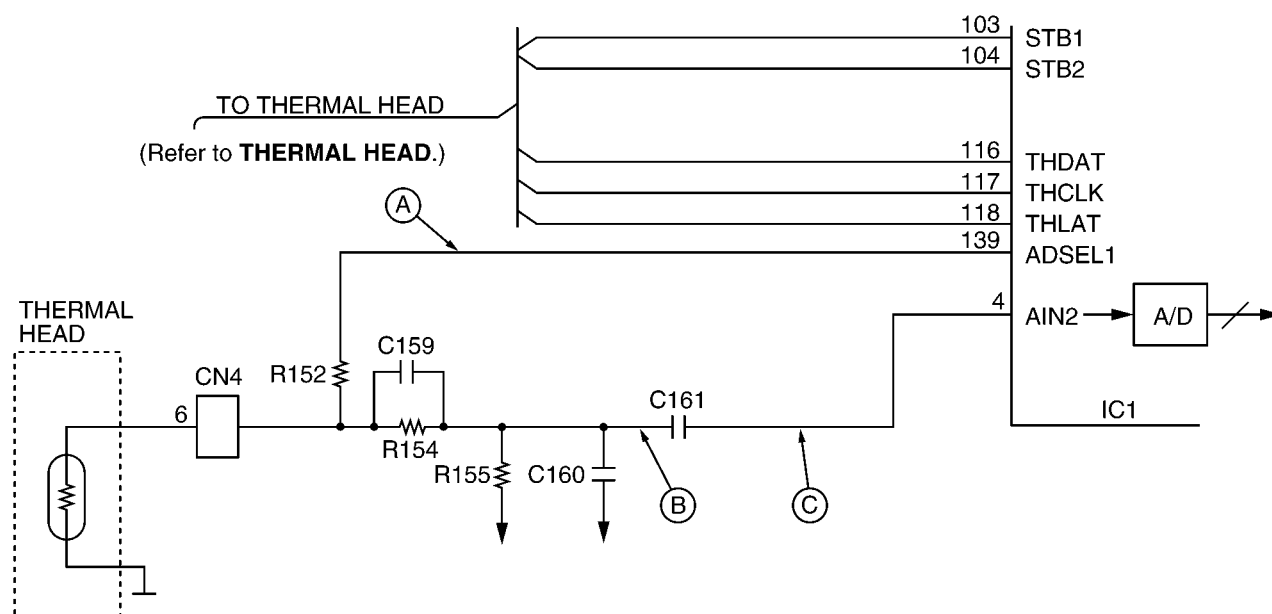

### 6.3.6. Supervision Circuit for the Thermal Head Temperature

#### 1. Function

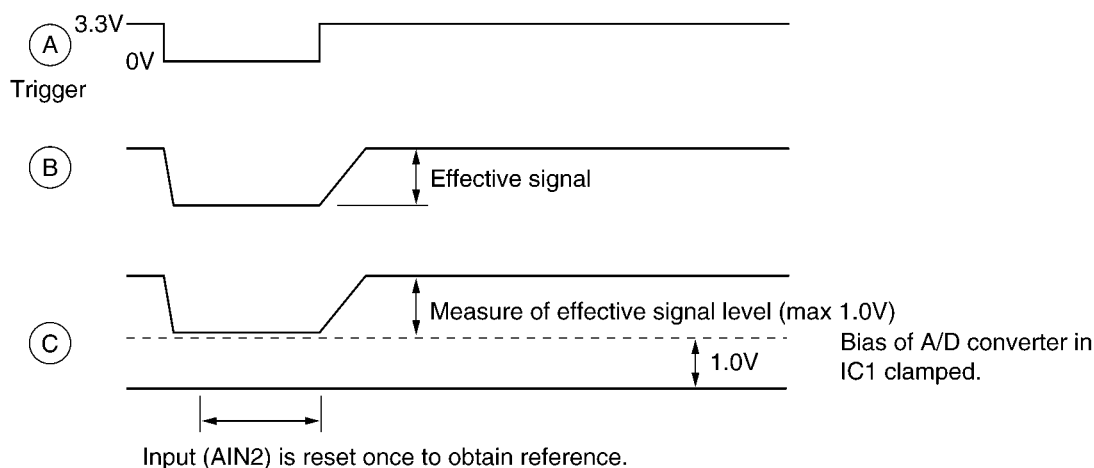

The thermistor changes the resistor according to the temperature and uses the thermistor's characteristics. The output of pin 139 of IC1 becomes a low level. Then when it becomes a high level, it triggers point A. In point C, according to the voltage output time, the thermal head's temperature is detected.

After the thermal head temperature is converted to voltage in B, it is then changed to digital data in the A/D converter inside IC1. The CPU decides the strobe width of the thermal head according to this value. Therefore, this circuit can keep the thermal head at an even temperature in order to stabilize the printing density and prevent the head from being overheated.

**Circuit Diagram**

**Timing Chart**

**CROSS REFERENCE:**  
Thermal Head(P.22)

## 6.4. Facsimile Section

### 6.4.1. Image Data Flow During Facsimile Operation

#### Copy (Fine, Super-Fine, Photo)

1. Line information is read by CIS (to be used as the reference white level) via route (1), and is input to IC1. Refer to **Block Diagram** (P.21)
2. In IC1, the data is adjusted to a suitable level for A/D conversion in the Analog Signal Processing Section, and via route (2) it is input to A/D conversion (8 bit). After finishing A/D conversion, the data is input to the Image Processing Section via route (3). Then via route (4) and route (5), it is stored in RAM as shading data.
3. The draft's information that is read by CIS is input to IC1 via route (1). After it is adjusted to a suitable level for A/D conversion via route (2), the draft's information is converted to A/D (8 bit), and it is input to the Image Processing Section. The other side, the shading data which flows from RAM via route (6) and route (7), is input to the Image Processing Section. After finishing the draft's information image processing, white is regarded as "0" and black is regarded as "1". Then via routes (4) and (5), they are stored in RAM.
4. The white/black data stored as above via routes (6) and (8) is input to the P/S converter. The white/black data converted to serial data in the P/S converter is input to the Thermal Head via route (9) and is printed out on recording paper.

#### Note:

- Fine: Reads 3.85 lines/mm
- Super Fine: Reads 7.7 lines/mm
- Photo: Reads 15.4 lines/mm

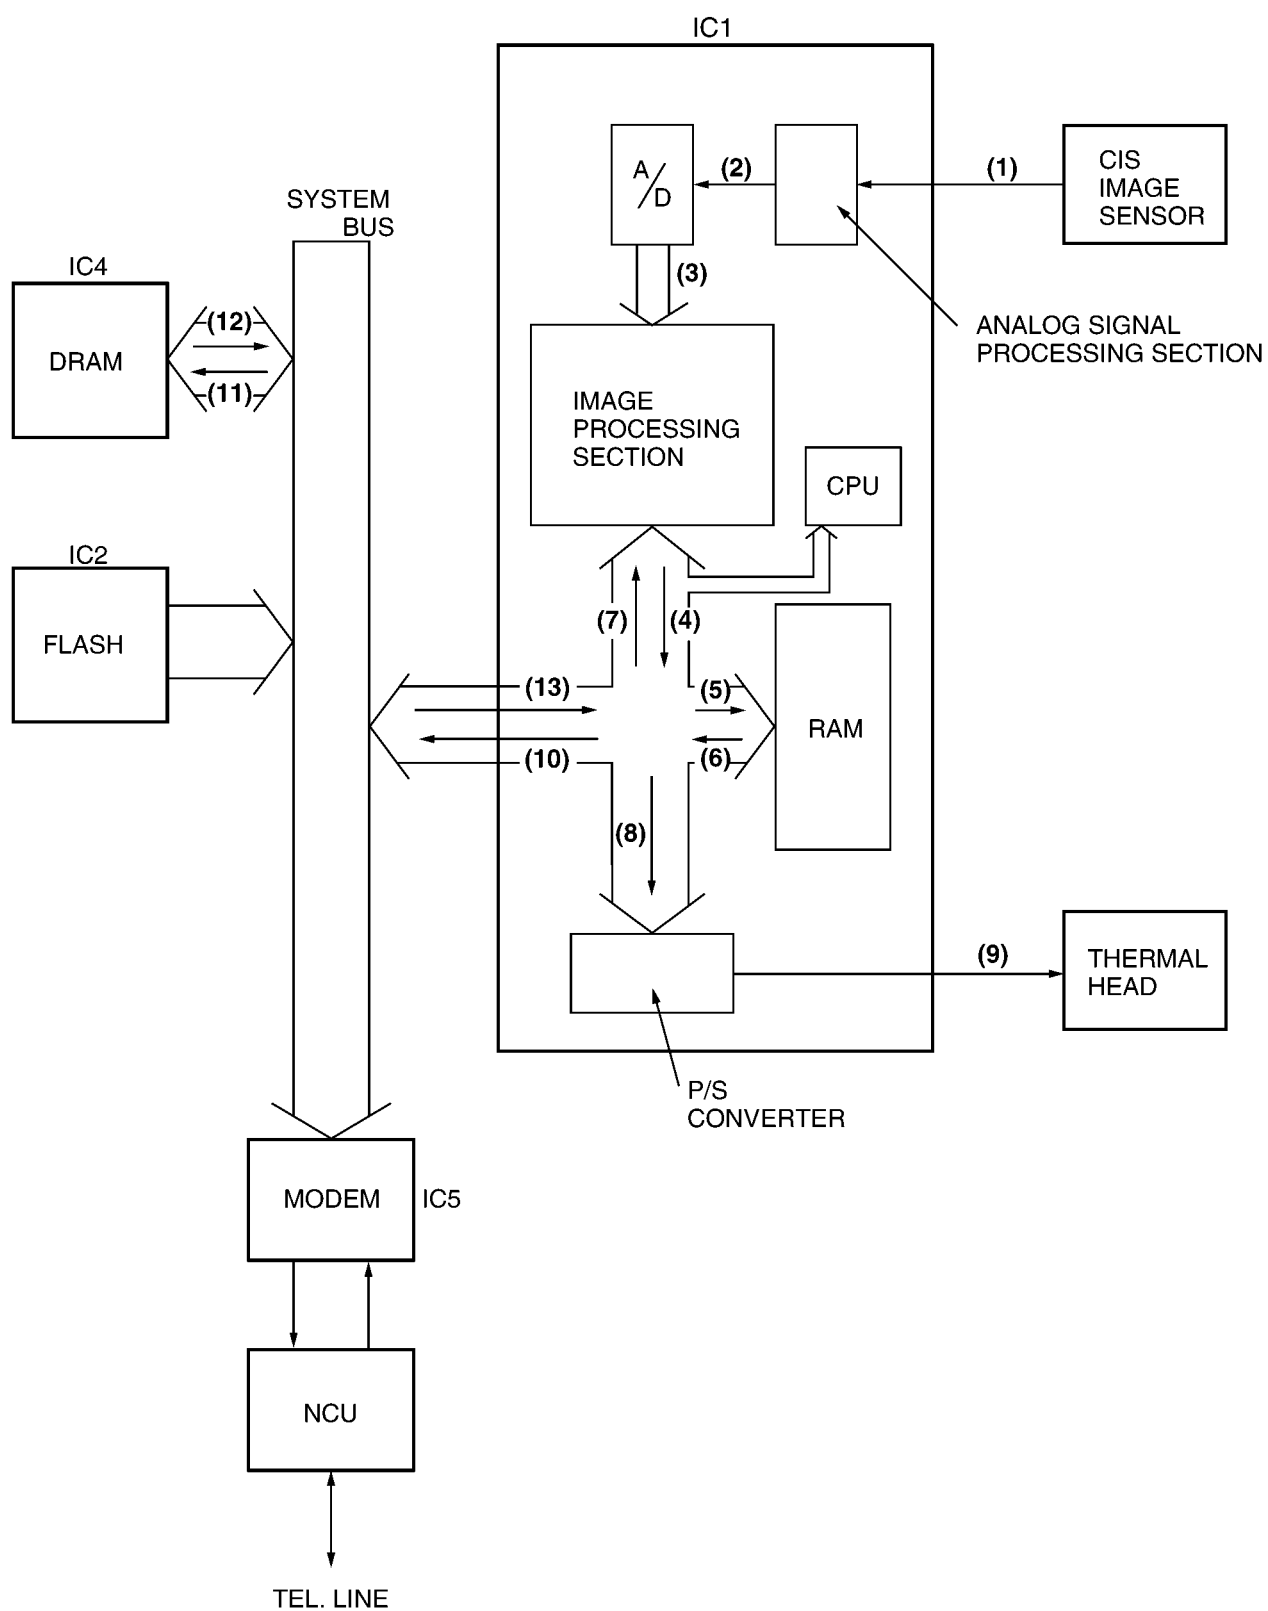

#### Transmission

1. Same processing as **Copy** items 1 - 3.
2. The data stored in the RAM of IC1 is output from IC1 via routes (6) and (10), and is stored in the system bus. Via route (11), it is stored in the communication buffer inside DRAM (IC4).
3. While retrieving data stored in the communication buffer synchronous with the modem, the CPU (inside IC1) inputs the data to the modem along route (12), where it is converted to serial analogue data and forwarded over the telephone lines via the NCU Section.

#### Reception

1. The serial analog image data is received over the telephone lines and input to the modem via the NCU section, where it is demodulated to parallel digital data. Then the CPU (IC1) stores the data in the communication buffer DRAM (IC4) along route (11).
2. The data stored in DRAM (IC4) is decoded by the CPU (IC1) via route (12), and is stored in RAM via routes (13) and (5).
3. Same processing as **Copy** item 4.

## 6.4.2. Block Diagram

### 6.4.3. Thermal Head

#### 1. Function

This unit utilizes state of the art thermal printer technology.

The recording paper (roll paper) is chemically processed. When the thermal head contacts this paper it emits heat momentarily, and black dots (appearing like points) are printed on the paper. If this continues, letters and/or diagrams appear, and the original document is reproduced.

#### Composition of the Receive Record Section (Thermal Recording Format)

#### 2. Circuit Operation

There are 27 driver ICs aligned horizontally on the thermal head and each one of these ICs can drive 64 heat emitting registers. This means that one line is at a density of  $64 \times 27 = 1728$  dots  $= (8 \text{ dots/mm})$ .

White/Black (white=0, black=1) data in one line increments is synchronized at IC1 pin 117 (THCLK), and sent from IC1 pin 116 (THDAT) to the shift register of the ICs. The shift registers of the 27 ICs are connected in series, and upon the shift of dot increment 1728, all the shift registers become filled with data, and a latch pulse is emitted to each IC from IC1 pin 118 (THLAT). With this latch pulse, all the contents of the shift registers are latched to the latch registers. Thereafter, through the addition of strobes from the IC1 pins (103 - 104) only black dot locations (=1) among latched data activates the driver, and the current passes to heat the emitting body causing heat emission.

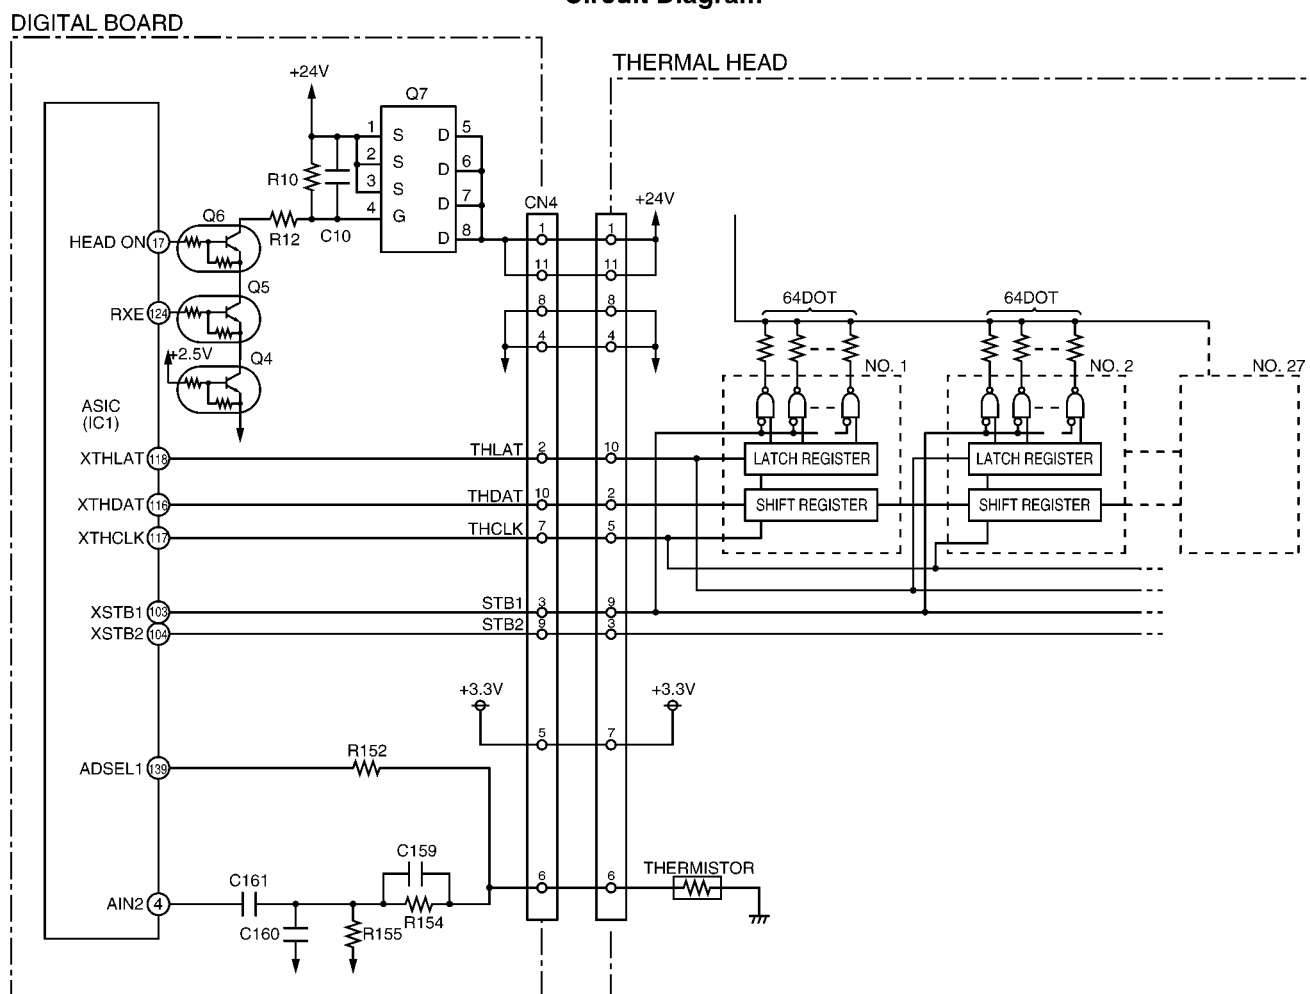

Here, the two line strobes, STB1 and STB2, impress at intervals of 9.216 msec, as required for one-line printout.

The sequence is shown on the next page. [Moreover, for the strobe width, the thermistor value inside the thermal head is detected according to IC1 pin 4. (See **Block Diagram** (P.21).) Depending on that value, the strobe width is recorded in FLASH (IC2).

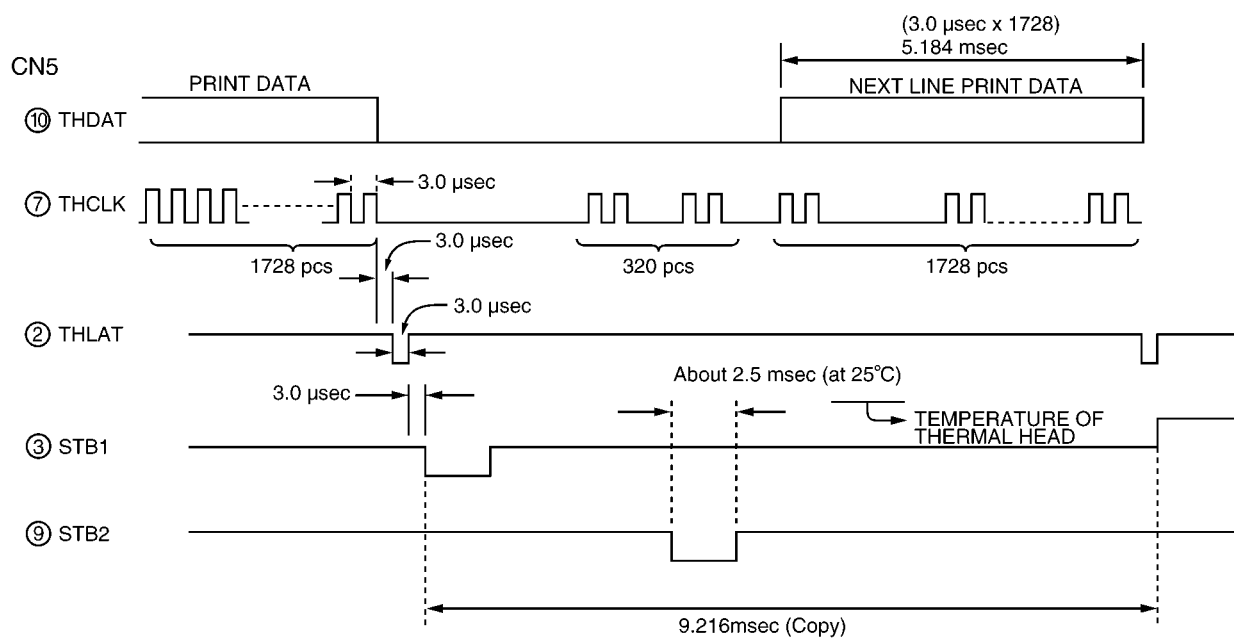

Accordingly, the strobe width is determined.

When the thermal head is not used, the IC1 (17, HEADON) becomes low, Q6 turns OFF, Q7 turns OFF, and the +24 V power supply for the thermal head driver is not impressed to protect the IC.

## Circuit Diagram

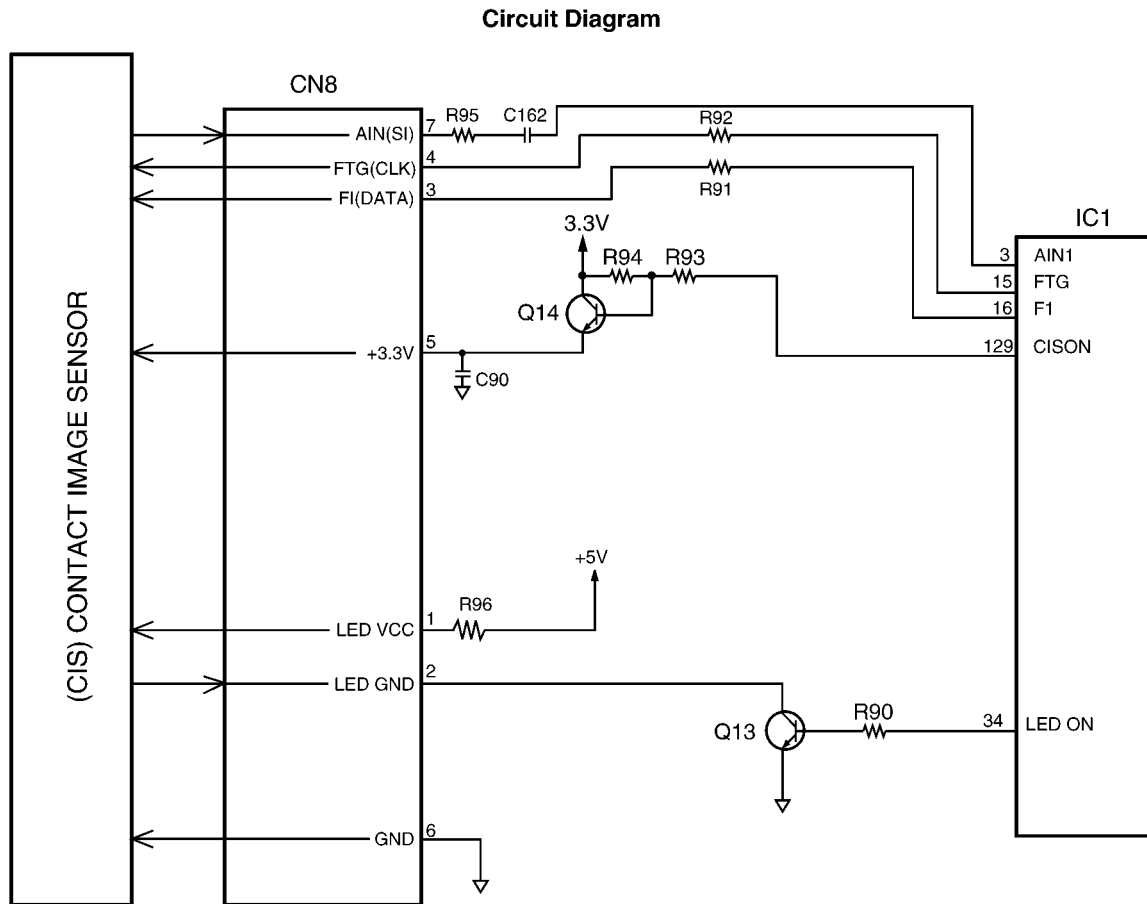

## Timing Chart

#### 6.4.4. Scanning Block

The scanning block of this device consists of a control circuit and a contact image sensor made up of a celfoc lens array, a light source, and photoelectric conversion elements.

When an original document is inserted and the start button pressed, pin 129 of IC1 goes to a high level and the transistor Q14 turns on. This applies voltage to the light source to light it. The contact image sensor is driven by each of the FTG-F1 signals output from IC1, and the original image illuminated by the light source undergoes photoelectric conversion to output an analogue image signal (AIN). The analogue image signal is input to the system ASIC on AIN1 (pin 3 of IC1) and converted into 8-bit data by the A/D converter inside IC1. Then this signal undergoes digital processing in order to obtain a high-quality image.

## 6.4.5. Stepping Motor Drive Circuit

### 1. Function

One individual stepping motor is used for transmission and reception. It feeds the document or recording paper synchronized for reading or printing.

### 2. Circuit Operation

During motor drive, ASIC IC1 pin 124 becomes a high level, and Q2 and Q1 go ON as a result. +24 V is supplied to the motor coil.

Stepping pulses are output from gate array IC1, causing driver IC7 to go ON. The motor coil is energized sequentially in 2 phase increments or 1-2 phase increments, which causes a 1-step rotation. A 1-step rotation is 0.13mm of recording paper or document paper. The timing chart is below.

Timing chart (2 Phase)

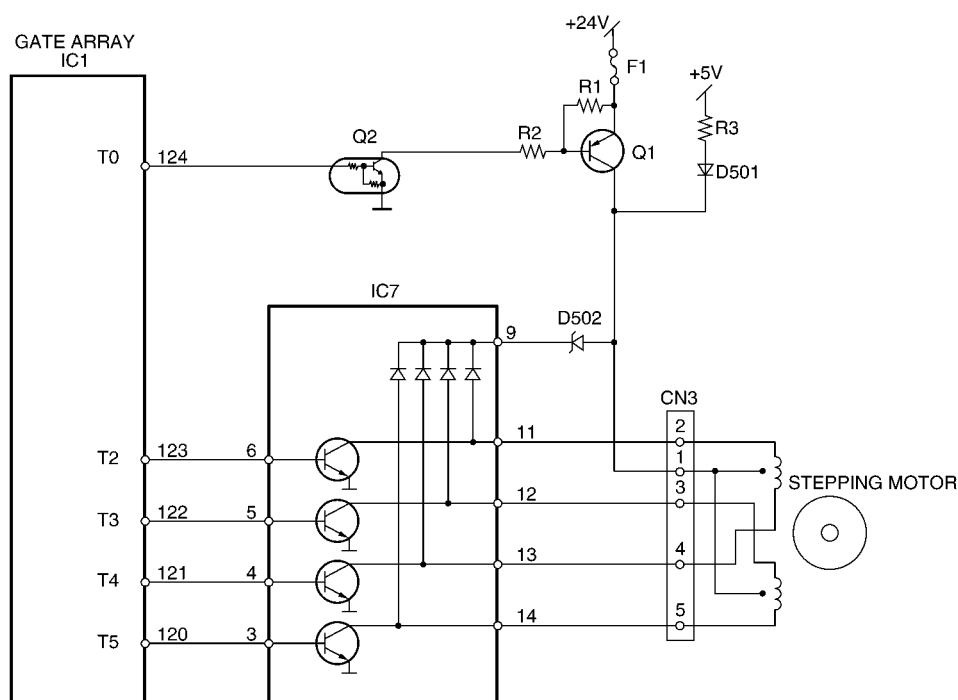

1-2 Phase (Asic T2-T5, output)

Stepping Motor Phase Pattern

Function	Mode	Phase Pattern	Speed
Copy	Fine/Photo	1-2	432 pps
	Super Fine	1-2	216 pps
FAX	STD	2	432 pps
	Fine/Photo	1-2	432 pps
	Super Fine	1-2	216 pps
—	Paper Feed	2	432 pps

Circuit Diagram

When the motor is OFF, gate array IC1 pin 124 becomes a low level and Q2 and Q1 also turns OFF. Instead of +24V, +5V is supplied through D501 so that the motor is held in place.

## 6.5. Sensors and Switches

All of the sensors and switches are shown below.

Sensor Circuit Location	Sensor	Sensor or Switch Name	Message Error
DIGITAL	CN5	Motor Position Sensor	[CALL SERVICE]
ANALOG	SW1	Recording Paper Sensor	[CHECK COVER] and [OUT OF PAPER]
	SW2	Hook SW	
	SW3	JAM Sensor	[PAPER JAMED]
Operation Panel	SW39	Document Top Sensor	[REMOVE DOCUMENT]
	SW38	Document Set Sensor	[CHECK DOCUMENT]

### 6.5.1. Motor Position Sensor

This sensor is a detection switch for recording the position of the CAM.

**Circuit Diagram**

**Digital Board**

	Signal (IC1-119 Pin)
Home position	Low level
Other	High level

### 6.5.2. Recording Paper Sensor (SW1)

When there is no recording paper, the plate is separated from the switch lever and the switch turns off. Pin 20 of IC1 becomes a high level. When there is recording paper, the plate pushes the switch lever and the switch turns ON. Pin 20 of IC1 becomes a low level.

**Circuit Diagram**

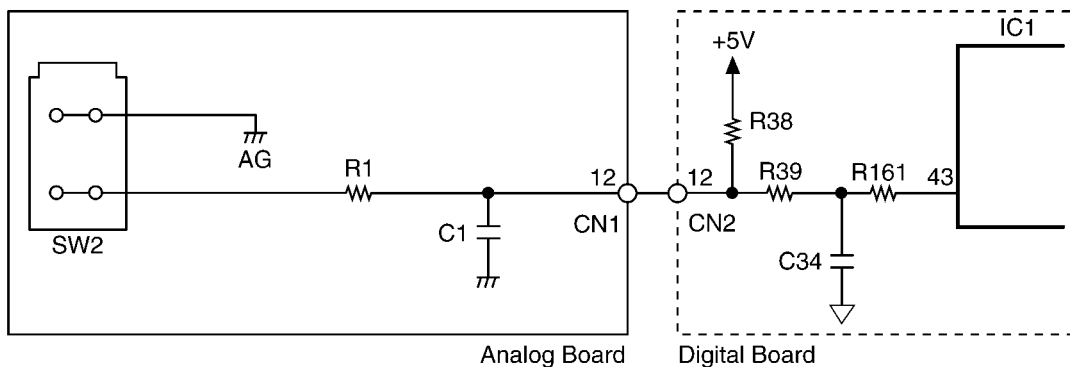

**Analog Board**

	Signal (IC1-20 Pin)
Paper	Low level
No paper	High level

### 6.5.3. Hook Switch (SW2)

When the handset is lifted, the switch turns ON, and the signal at pin 43 of IC1 becomes low.  
When the handset is returned, the switch turns OFF, and the signal at pin 43 of IC1 becomes high.

Circuit Diagram

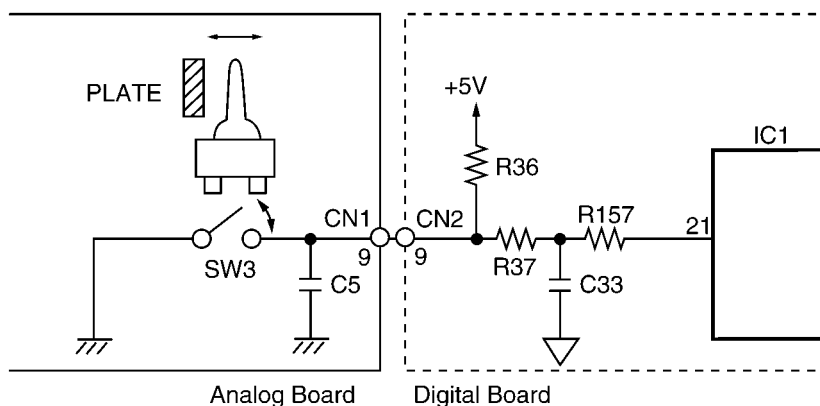

Digital Board

	SW	Signal
ON-Hook	OFF	High level (IC1-43 pin)
OFF-Hook	ON	Low level

### 6.5.4. Jam Sensor (SW3)

The JAM sensor is a detection switch for determining whether the recording paper edge is in the correct position or not. If the recording paper cannot be detected correctly at the JAM sensor position even when recording paper is present, then JAM is displayed. If the recording paper is at the sensor position, then the switch turns on the IC1-21pin switches to a high level.

Circuit Diagram

Analog Board

	Signal (IC1-21 Pin)
Paper	Low level
No paper	High level

### 6.5.5. Document Top Sensor (SW39)

When a document is brought to the read position, the SW becomes ON, and the input signal of IC1-5 pin (Operation) becomes a low level. When there is no document at the read position, the SW becomes OFF, and the input signal of IC1-5 pin (Operation) becomes a high level.

Circuit Diagram

Operation Board

	Signal (IC1-5 pin)
Out of the Read Position	High level
At the Read Position	Low level

### 6.5.6. Document Set Sensor (SW38)

When a document is set, the SW becomes ON, and input signal of IC1-6 pin (Operation) becomes a low level.

When there is no document, the SW becomes OFF, and the input signal of IC1-6 pin (Operation) becomes a high level.

Circuit Diagram

Operation Board

	Signal (IC1-6 pin)
No document	High level
Set document	Low level

## 6.6. Modem Section

### 6.6.1. Function

The unit uses a 1 chip modem (IC5) that serves as an interface between the control section for FAX transmission and reception and the telephone line. During a transmitting operation, the digital image signals are modulated and sent to the telephone line. During a receiving operation, the analogue image signals which are received via the telephone line are demodulated and converted into digital image signals. The communication format and procedures for FAX communication are standardized by ITU-T. This 1 chip modem (IC5) has hardware which sends and detects all of the necessary signals for FAX communication (DTMF). It can be controlled by writing commands from the CPU (IC1: inside ASIC) to the register in the modem (IC5).

This modem (IC5) also sends DTMF signals, generates a call tone (from the speaker), and detects a busy tone and dial tones.

Overview of Facsimile Communication Procedures (ITU-T Recommendation):

#### 1. ON CCITT (International Telegraph and Telephone Consultative Committee)

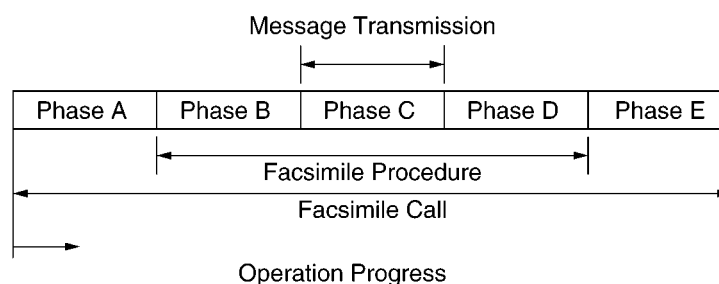

The No. XIV Group of CCITT, one of the four permanent organizations of the International Telecommunications Union (ITU), investigates and make recommendations on international standards for facsimiles.

#### 2. Definition of Each Group

- Group I (G1)  
Official A-4 size documents without using formats which reduce the band width of a signal are sent over telephone lines. Determined in 1968.  
Transmission for about 6 minutes at a scanning line density of 3.85 lines/mm.
- Group II (G2)  
Using reduction technology in the modulation/demodulation format, an A-4 size document is sent at an official scanning line density of 3.85 lines/mm for about 3 minutes.  
Methods to suppress redundancy are not used.  
Determined in 1976.
- Group III (G3)  
Method of suppressing redundancy in the image signal prior to modulation is used. An A-4 size document is sent within about one minute.  
Determined in 1980.
- Group IV (G4)  
Transmission is via the data network. A method is provided for suppressing redundancy in signals prior to transmission, and error-free reception of transmission is possible.  
The scope of these facsimile applications is not limited simply to transmission of written statements. Through symbiotic linkages with other communication methods, it can be expected to expand to include integrated services.

#### 3. Facsimile Call Time Series

As shown in the following diagram, the facsimile call time series is divided into five phases.

**Phase A:** Call setting

Call setting can be manual/automatic.

**Phase B:** Pre-message procedure

Phase B is a pre-processing procedure and sequence for confirming the status of the terminal, transmission route, etc., and for terminal control. It implements terminal preparation status, determines and displays terminal constants, confirms synchronization status, etc. and prepares for transmission of facsimile messages.

**Phase C:** Message transmission

Phase C is the procedure for the transmitting facsimile messages.

**Phase D:** Post message procedure

Phase D is the procedure for confirming that the message is completed and received. For continuous transmission, phase B or phase C is repeated for transmission.

**Phase E:** Call retrieval

Phase E is the procedure for call retrieval, that is for circuit disconnection.

**4. Concerning Transmission Time**

$$\text{Transmission Time} = \text{Control Time} + \text{Image Transmission Time} + \text{Hold Time}$$

Transmission time consists of the following.

**Control time:**

This is time at the start of transmission when the functions at the sending and receiving sides are confirmed, the transmission mode is established, and transmission and reception are synchronized.

**Image transmission time:**

This is the time required for the transmission of document contents (image data). In general, this time is recorded in the catalog, etc.

**Hold time:**

This is the time required after the document contents have been sent to confirm that the document was actually sent, and to check for telephone reservations and/or the existence of continuous transmission.

**5. Facsimile Standards**

Item	Telephone Network Facsimile
	G3 Machine
Connection Control Mode	Telephone Network Signal Mode
Terminal Control Mode	T. 30 Binary
Facsimile Signal Format	Digital
Modulation Mode	PSK (V. 27 ter) or QAM (V. 29)
Transmission Speed	300 bps (Control Signal) 2400, 4800, 7200, 9600 bps (FAX Signal)
Redundancy Compression Process (Coding Mode)	1 dimension: MH Mode 2 dimension: MR Mode (K=2.4)
Resolution	Main Scan: 8 pel/mm Sub Scan: 3.85, 7.7l/mm
Line Synchronization Signal	EOL Signal
1 Line Transmission Time [ms/line]	Depends on the degree of data reduction. Minimum Value: 10, 20 Can be recognized in 40ms.

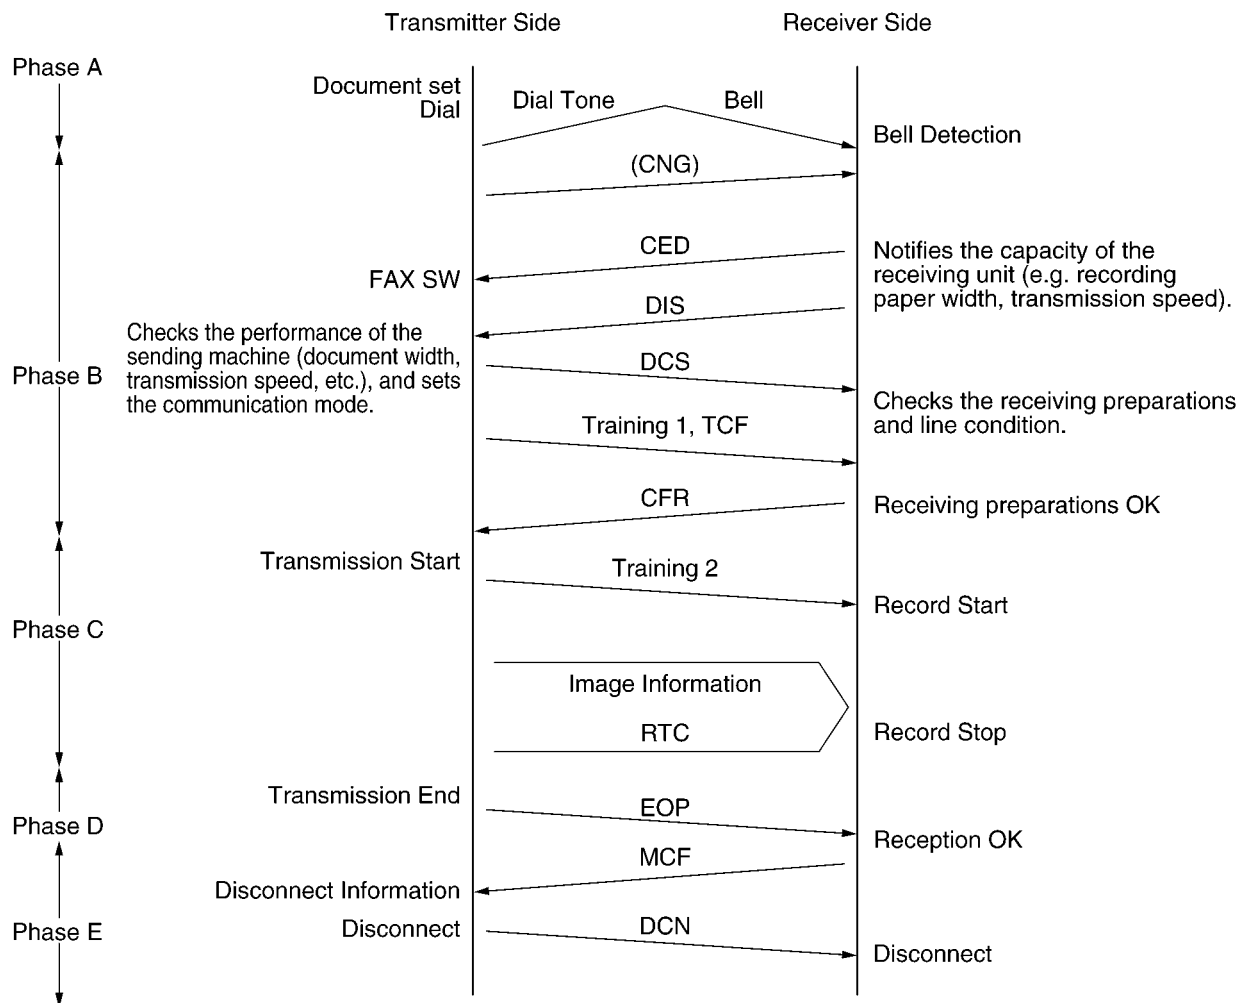

## 6. Explanation of Communication and Compression Technology

### a. G3 Communication Signals (T. 30 Binary Process)

For G3 Facsimile communication, this is the procedure for exchanging control signals between the sending and receiving machines both before and after transmission of image signals.

Control signals at 300 bps FSK are: 1850 Hz...0, 1650Hz...1.

An example of a binary process in G3 communication is shown below.

### Explanation of Signals

Control signals are comprised mainly of 8-bit identification signals and the data signals added to them. Data signals are added to DIS and DCS signals.

Signal.....DIS (Digital Identification Signal)

Identification Signal Format.....00000001

#### Function:

Notifies the capacity of the receiving unit. The added data signals are as follows.

Signal.....DCS (Digital Command Signal)

Identification Signal Format.....X1000001

**Example** (Some models do not support the following items.):

Bit No.	DIS/DTC	DCS
1	Transmitter --- T.2 operation	
2	Receiver --- T.2 operation	Receiver --- T.2 operation

Note 1 - Standard facsimile units conforming to T.2 must have the following capability: Index of cooperation (IOC)=264.

Note 2 - Standard facsimile units conforming to T.3 must have the following capability: Index of cooperation (IOC)=264.

Note 3 - Standard facsimile units conforming to T.4 must have the following capability: Paper length=297 mm.

Signal	Identification Signal Format	Function
Training 1	_____	A fixed pattern is transmitted to the receiving side at a speed (2400 bps to 9600 bps) designated by DCS, and the receiving side optimizes the automatic equalizer, etc., according to this signal.
TCF (Training Check)	_____	Sends 0 continuously for 1.5 seconds at the same speed as the training signal.
CFR (Confirmation to Receive)	X0100001	Notifies the sending side that TCF has been properly received. If TCF is not properly received, FTT (Failure To Train) X0100010 is relayed to the sender. The sender then reduces the transmission speed by one stage and initiates training once again.
Training 2	_____	Used for reconfirming the receiving side like training 1.
Image Signal	Refer to the next page.	_____
RTC (Return to Control)	_____	Sends 12 bits (0...01 × 6 times) to the receiver at the same speed as the image signal and notifies completion of transmission of the first sheet.
EOP (End of Procedure)	X1110100	End of one communication
MCF (Message Confirmation)	X0110001	End of 1 page reception
DCN (Disconnect)	X1011111	Phase E starts.
MPS (Multi-Page Signal)	X1110010	Completion of transmission of 1 page. If there are still more documents to be sent, they are output instead of EOP. After MCF reception, the sender transmits an image signal of the second sheet.
PRI-EOP (Procedural Interrupt-EOP)	X1111100	If there is an operator call from the sender, it is output after RTC.
PIP (Procedural Interrupt Positive)	X0110101	This is output when an operator call is received.

## 6.6.2. Modem Circuit Operation

The modem (IC5) has all the hardware satisfying the CCITT standards mentioned previously.

When the ASIC IC1 (61) is brought to a low level, the modem (IC5) is chip-selected and the resistors inside IC are selected by the select signals from ASIC (IC1) ADR0-ADR4. The commands are written through the data bus, and all the processing is controlled by the ASIC (IC1) according to CCITT procedures. The INT signal dispatched from IRQ (pins 100 of IC5) to ASIC (IC1) when the transmission data is accepted and the received data is demodulated, the ASIC (IC1) implements post processing. This modem (IC5) has an automatic application equalizer.

With training signal 1 or 2 during G3 reception, it can automatically establish the optimum equalizer. The modem (IC5) operates using the 32.256 MHz clock (X3).

### 1. Facsimile Transmission

The digital image data on the data bus is modulated in the modem (IC5), and sent from pin 69 via Analog SW IC10, amplifier IC9 and the NCU section to the telephone line.

Refer to **Block Diagram**(P.21).

### 2. Facsimile Reception

The analog image data which is received from the telephone line passes through the NCU section and enters pin 47 of the modem (IC5). The signals that enter pin 47 of the modem (IC5) are demodulated in the board to digital image signals, then placed on the data bus.

In this case, the image signals from the telephone line are transmitted serially. Hence, they are placed on the bus in 8 bit units. Here, the internal equalizer circuit reduces the image signals to a long-distance receiving level.

This is designed to correct the characteristics of the frequency band centered about 3 kHz and maintain a constant receiving sensitivity. It can be set in the service mode.

Refer to **Signal Route**(P.107).

### 3. DTMF Transmission (Monitor tone)

The DTMF signal generated in the modem (IC5) is output from pin 56, and is then sent to the circuit on the same route as used for facsimile transmission.

Refer to **Signal Route**(P.107).

#### (DTMF Monitor Tone)

Refer to **Signal Route**(P.107).

### 4. Call Tone Transmission

This is the call signal which is generated in the ASIC (IC1) and sent to the speaker.

Refer to **Signal Route**(P.107).

### 5. Busy/Dial Tone Detection

The path is the same as FAX receiving. When it is detected, the carrier detect bit of the resistor in the modem (IC5) becomes 1, and this status is monitored by the ASIC (IC1).

### 6. Caller ID Detection

The caller ID signal which is received from the telephone line/passes through IC1 pin (2-1). And it enters pin 50 of the modem (IC5).

## 6.7. NCU Section

### 6.7.1. General

It is composed of bell detection circuit, pulse dial circuit, line amplifier, sidetone circuits.

### 6.7.2. Bell Detection Circuit

#### 1. Circuit Operation

The signal waveform for each point is indicated below. The signal (low level section) input to pin 23 of ASIC IC1 on the digital board.

TEL LINE → PC1 (1, 2 → 4) → CN1 (11) → {CN2 (11) → IC1 (23)}

**Note:**{ } : inside the digital board

### 6.7.3. ON/OFF Hook Circuit

Normally (ON-HOOK condition), LINE RELAY (RLY1) is OFF. While OFF-HOOK, RLY1 turns ON. This LINE RELAY is controlled by pin 130 of IC1 through the Q7.

#### ON-HOOK:

IC1 (130) Low Level → Q7 OFF → RLY1 OFF

#### OFF-HOOK:

IC1 (130) High Level → Q7 ON → RLY1 ON

### 6.7.4. Pulse Dial Circuit

#### Make state:

IC1 (130) High Level → Q7 ON → RLY1 ON

#### Break state:

IC1 (130) Low Level → Q7 OFF → RLY1 OFF

## 6.7.5. Line Amplifier and Side Tone Circuits

### 1. Circuit Operation

The reception signal received as output from line transformer T1 is given as input to R81, C17, R13 and IC2(2).

Then it is input to the reception system at an amplifier gain of 2.5 dB from pin (2).

The transmission signal is input from CN1 pin (5), and output to the TEL line through C11, R16, IC2(6,7) and T1. Without a side tone circuit, the transmission signal would return to the reception amplifier via C28, R27 and R26. Here, the signal output from CN1 pin (5) passes through C28, R23, R22, R82, C21 and R18, and enters the amplifier IC2 pin (3). This is used to cancel the return portion of the transmission signal. This is the side tone circuit.

## 6.7.6. Calling Line Identification Circuit

### 1. Function

This unit is compatible with the Caller ID service offered by your local telephone company. To use this feature, you must subscribe to a Caller ID service. The data for the caller ID from the telephone exchange is sent during the interval between the first and second rings of the bell signal. The data from the telephone exchange is a modem signal which is modulated in an FSK (Frequency Shift Keying) format. Data "0" is a 1200 Hz sine wave, and data 1 a 2200 Hz sine wave.

There are two type of the message format which can be received: i.e. the single data message format and multiple data message format.

The multiple data format allows to transmit the name and data code information in addition to the time and telephone number data.

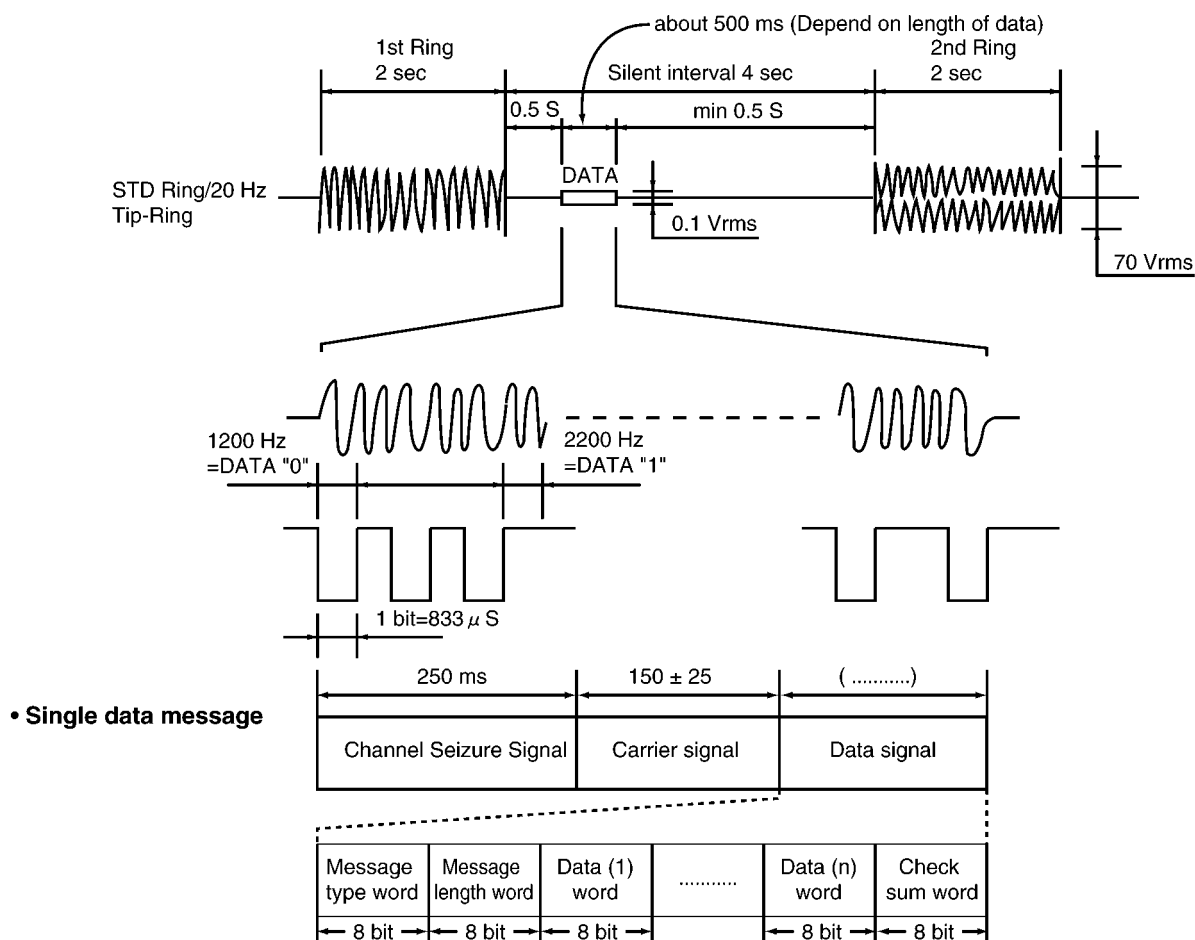

When there is multiple data in the unit, the name or telephone number are displayed.

### 2. Circuit Operation:

The caller ID signal input from TEL LINE is processed with IC5.

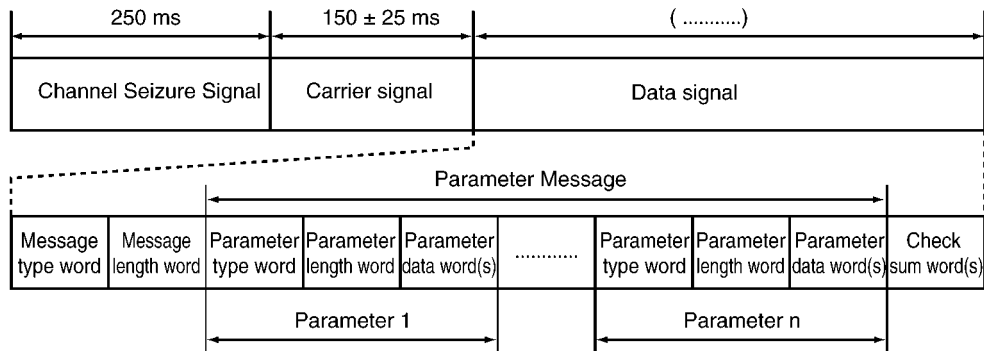

Refer to **Signal Route** (P.107) for the route of caller ID signal.

**Timing Chart**

- 1 word = All 8 bit data
- Message Type Word = Fixed value "00000100"
- Message Length Word = number of the data word
- Data word = The data value (month, day, hour, minute, telephone number)

• **Multiple data message**

- 1 word = All 8 bit data
- Message Type = Fixed value "10000000"
- Message Length Word = number of the Parameter Message word
- Parameter Type Word = Kind of data (ex. the time, phone number)
- Parameter Length Word = number of the Parameter data word
- Parameter Word (s) = the data value

### 6.7.7. Calling Line Identification Circuit (DTMF)

#### 1. Function

This unit is compatible with the Caller ID service offered by your local telephone company. To use this feature, you must subscribe to a Caller ID service. The data for the Caller ID from the telephone exchange is sent before the first ring signal. The data from the telephone exchange is sent by DTMF signal.

#### 2. Circuit Operation:

The Caller ID signal from TEL LINE is processed with MODEM (IC5). Refer to **Signal Route** (P.107) for the route of Caller ID (DTMF) signal.

#### Timing Chart

## 6.8. ITS (Integrated Telephone System) and Monitor Section

### 6.8.1. General

The general ITS operation is performed by the modem IC5. The alarm tone, the key tone, the calling tone and the beep are output from the ASIC IC1 (digital board).

### 6.8.2. Handset Circuit

#### 1. Function

This circuit controls the conversation over the handset, i.e. the transmitted and received voices to and from the handset.

#### 2. Signal path

Refer to **Signal Route** (P.107)

### 6.8.3. Monitor Circuit for Each Signals

#### 1. Function

This circuit monitors various tones, such as **1** DTMF tone, **2** Alarm/Beep/Key tone/Bell **3** Dummy ring back tone.

#### 2. Signal path

Refer to **Signal Route** (P.107)

## 6.9. ATAS (Automatic Telephone Answering System) Section

### 6.9.1. Remote Receiving

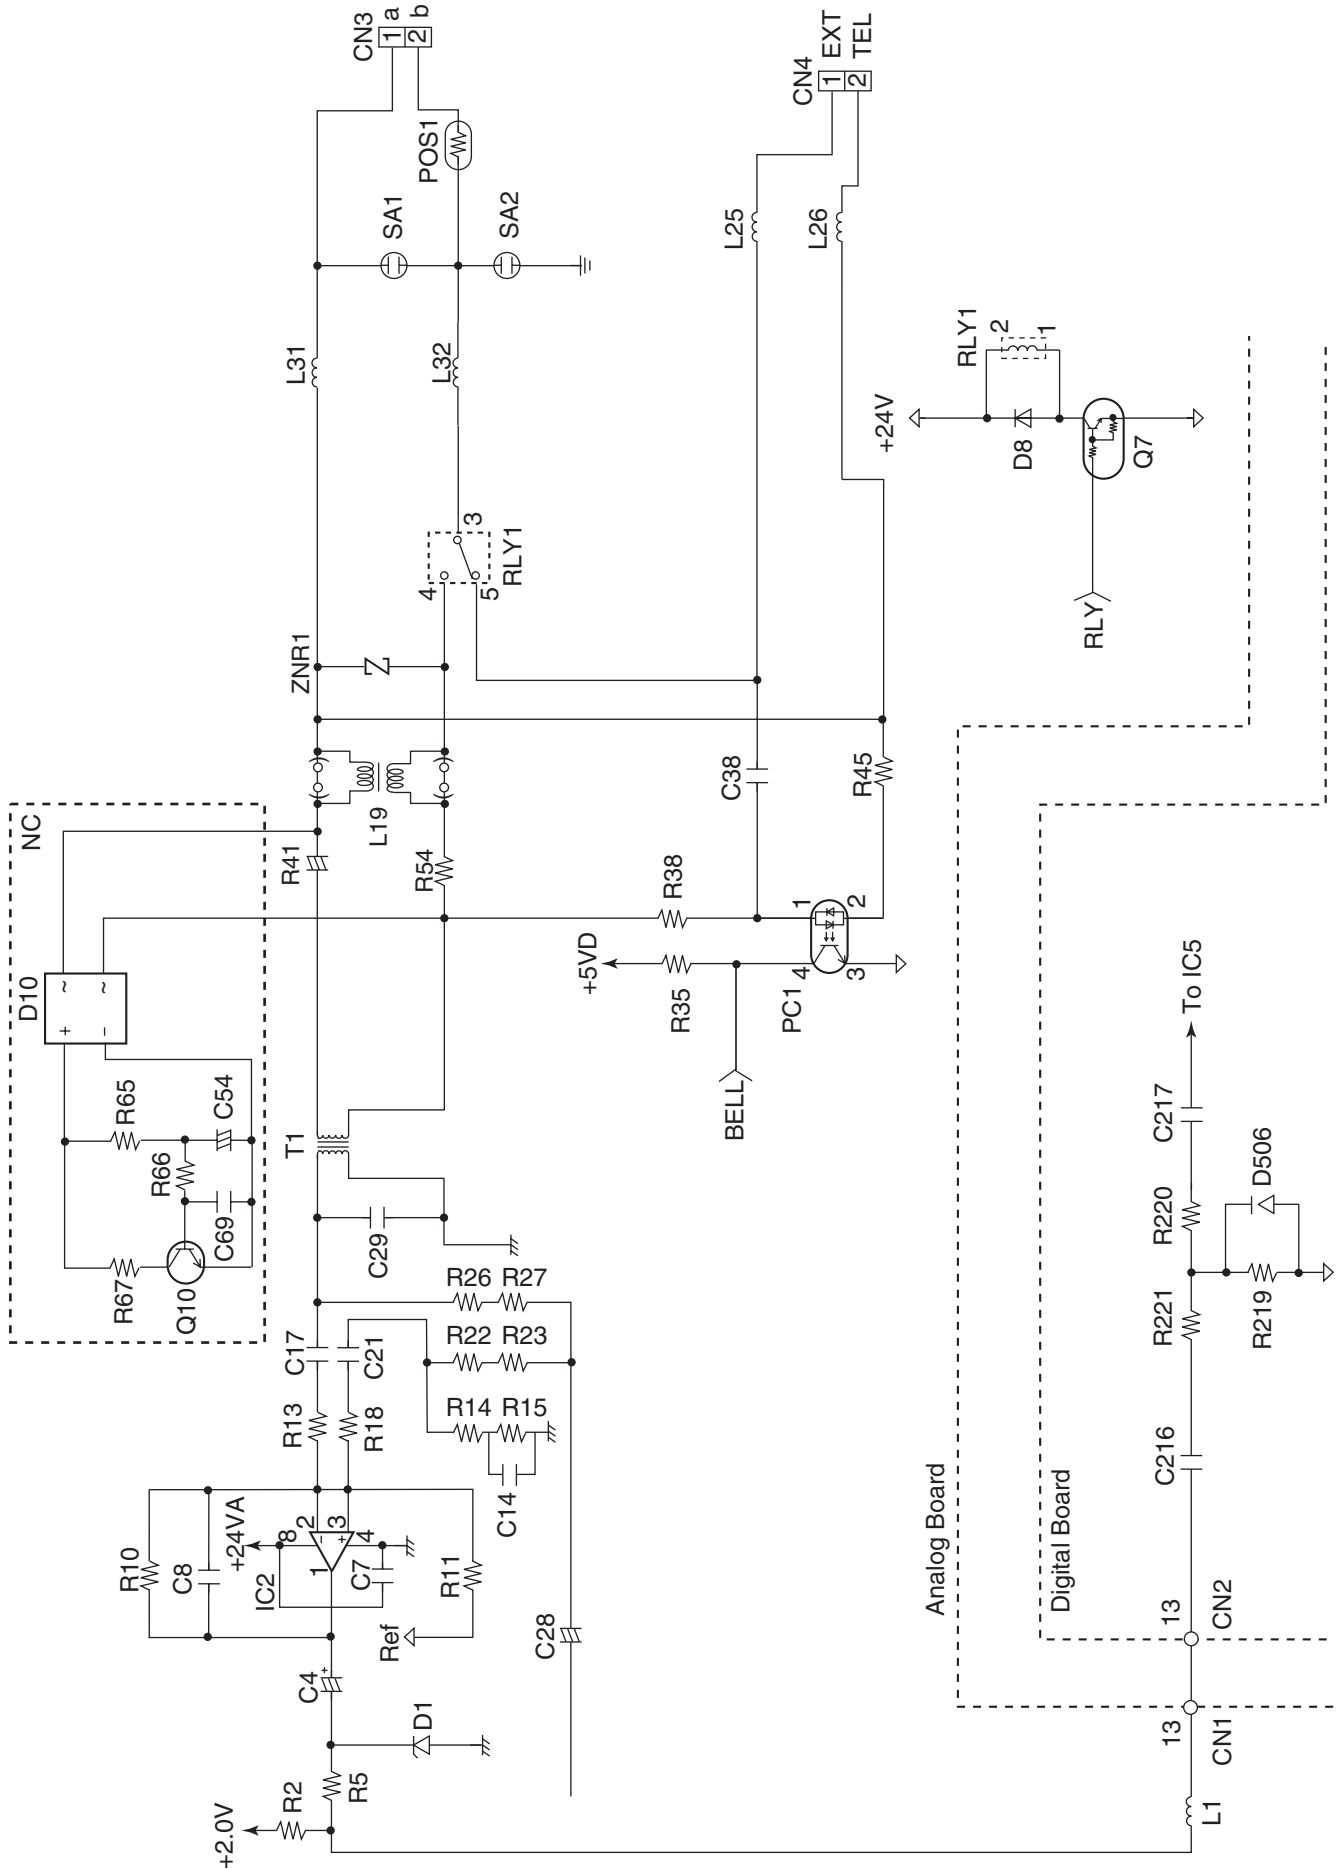

#### 1. Function

This is the parallel connection DTMF signal for the TEL mode between a and b. When the other party is a FAX, the unit changes to FAX receiving.

#### 2. Signal Path

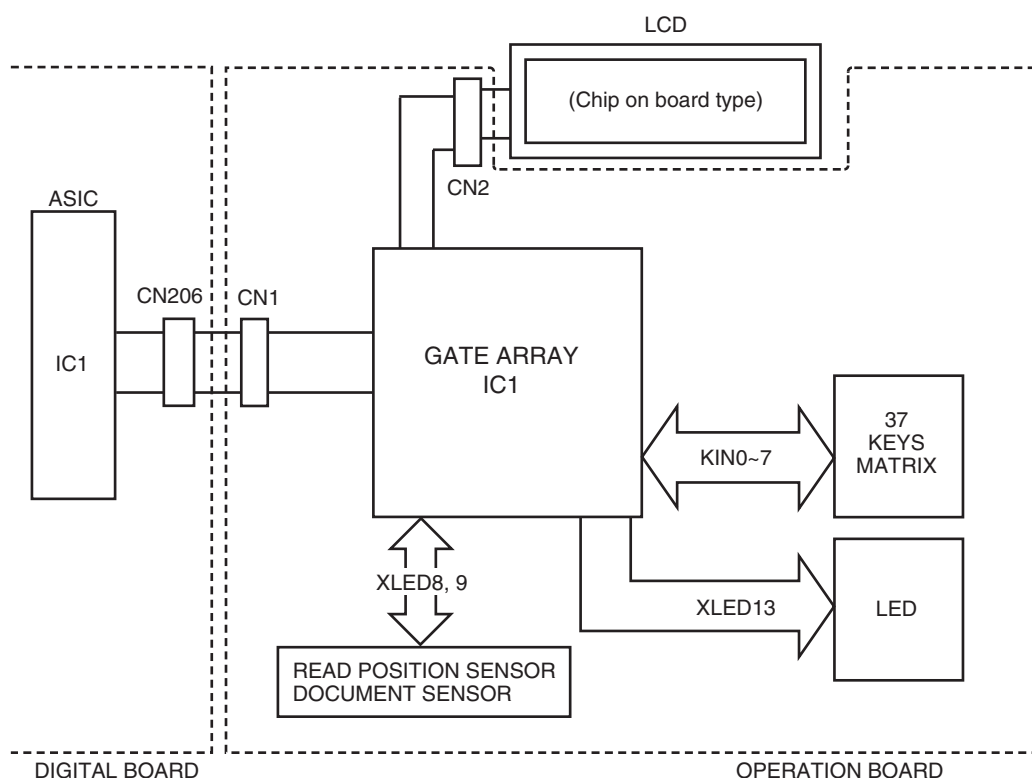

Refer to **Signal Route** (P.107)

## 6.9.2. Circuit Diagram

## 6.10. Operation Board Section

The unit consists of a LCD (Liquid crystal display), KEYS and LEDs (light-emitting diodes). They are controlled by the Gate Array (IC1) and ASIC (IC1: on the DIGITAL BOARD). The key matrix table is shown below.

KX-FT931LA-B OPERATION BOARD: BLOCK DIAGRAM

### Key Matrix

	KIN0	KIN1	KIN2	KIN3	KIN4	KIN5	KIN6	KIN7
KSL0	FAX/START (SW1)	BROADCAST (SW26)	# (SW16)	0 (SW11)	* (SW6)		SKEY 6 (SW31)	NAVI LEFT (SW21)
KSL1	COPY (SW2)	SKEY 3 (SW27)	MONITOR (SW17)	8 (SW12)	7 (SW7)		MENU (SW32)	NAVI DOWN (SW22)
KSL2	STOP (SW3)	SKEY 2 (SW28)	PAUSE (SW18)	9 (SW13)	4 (SW8)		AUTO ANSWER (SW33)	NAVI UP (SW23)
KSL3	1 (SW4)		FLASH (SW19)	3 (SW14)	2 (SW9)		SKEY 5 (SW34)	NAVI RIGHT (SW24)
KSL4	CALLER ID (SW5)	SKEY 1 (SW30)	REDIAL (SW20)	6 (SW15)	5 (SW10)		SKEY 4 (SW35)	NAVI CENTER (SW25)

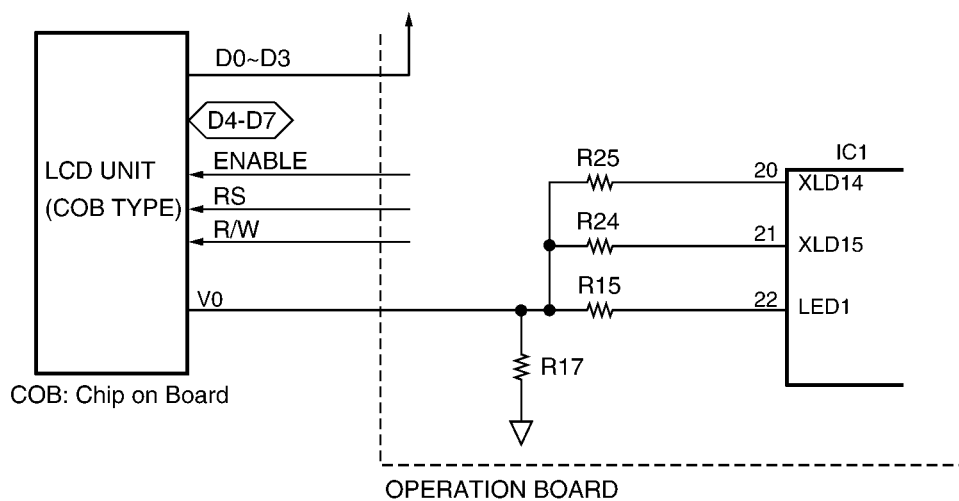

### LED

	XLED13
	LED1

## 6.11. LCD Section

The Gate Array IC(IC1) works only for writing the ASCII code from the data bus (D4~D7). V0 is supplied for the crystal drive. R25, R24, R15 and R17 are density control resistors. Consequently, in this unit, the timing (positive clock) is generated by the LCD interface circuitry in the gate array (IC1).

**Circuit Diagram**

**Timing Chart**

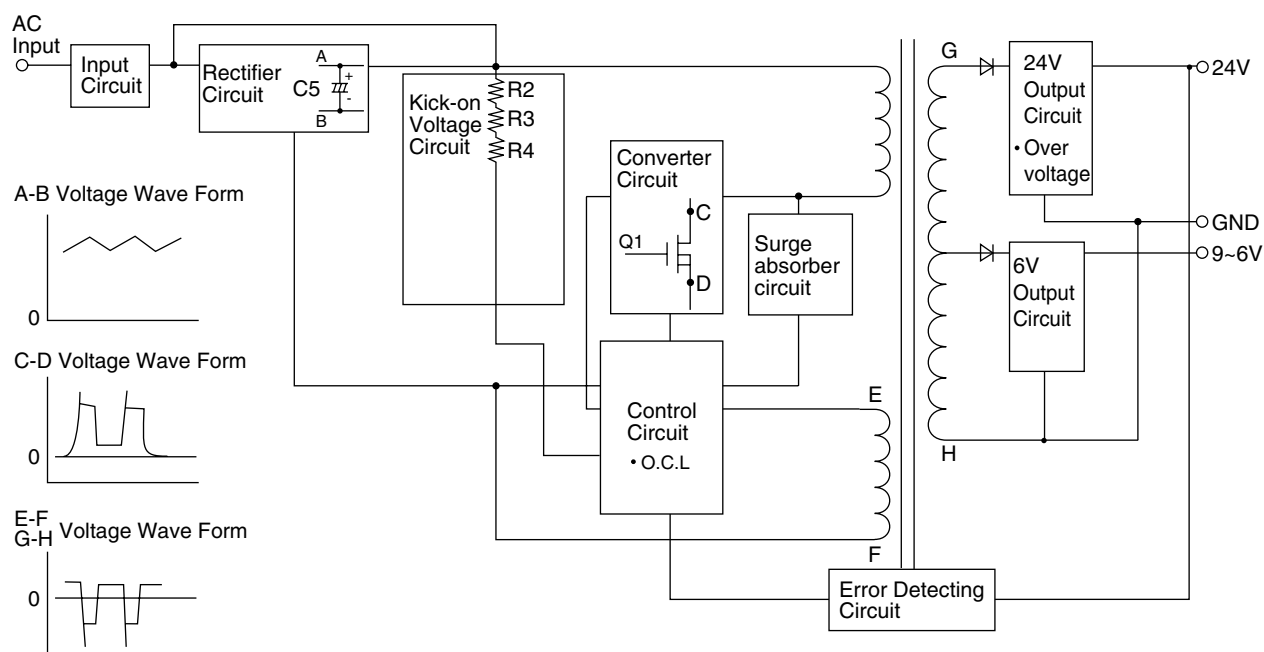

Display mode	Density	Normal	Dark
English font (Global) 2 lines	LED1 (IC1-22pin)	H	L
	LED15 (IC1-21pin)	L	L
	LED14 (IC1-20pin)	Hi-Z	L
Chinese font 2 lines	LED1	L	H
	LED15	Hi-Z	H
	LED14	Hi-Z	H

## 6.12. Power Supply Board Section

This power supply board uses the switching regulator method.

**Block Diagram**

### [Input Circuit]

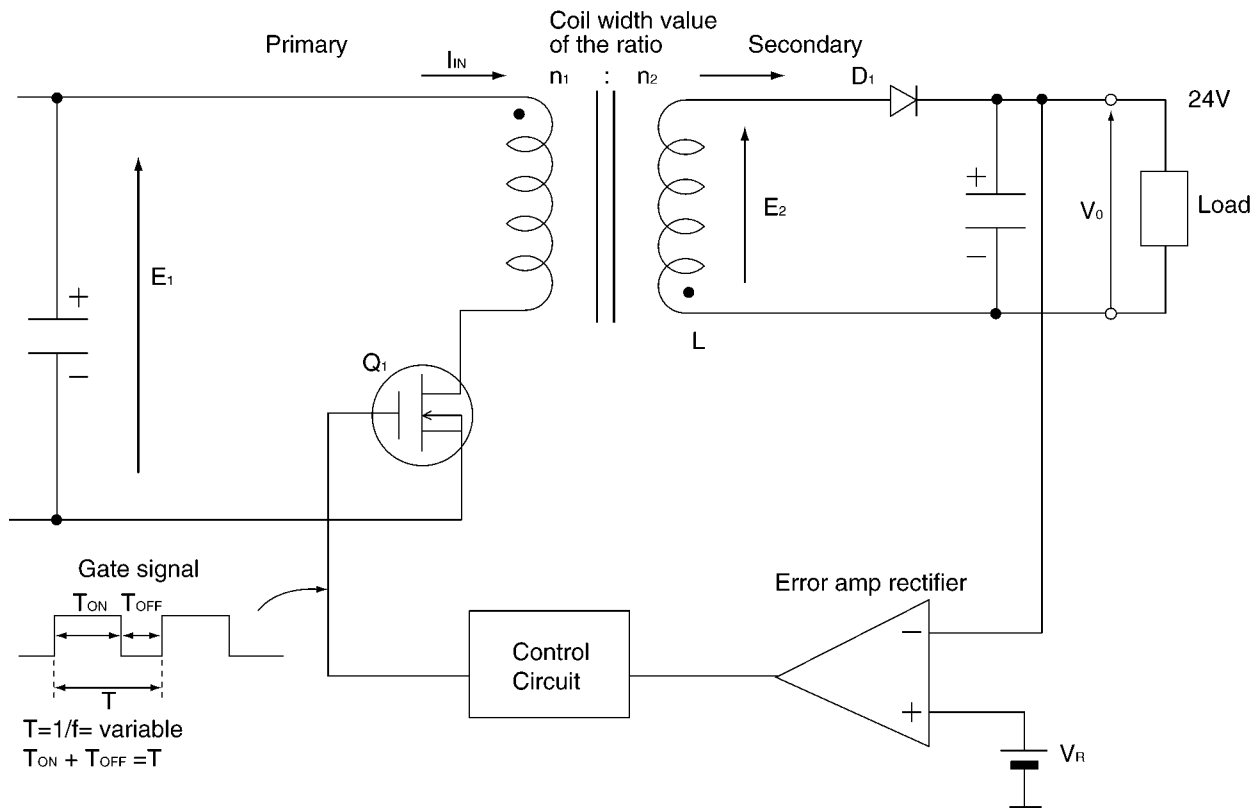

The input current goes into the input rectifier circuit through the filter circuit. The filter circuit decreases the noise voltage and the noise electric field strength.

### [Rectifier Circuit]

The input current is rectified by D10, D11, D12 and D13 and charges C5 to make DC voltage. Then it supplies power to the converter circuit.

### [Kick-on voltage circuit]

Bias is applied to the Q1 gate via this circuit when the AC power is turned on and Q1 begins operating.

The following is an overview of how the power supply unit is controlled.  
The control method of this power supply unit is pulse width modulation.

When  $Q_1$  is ON, the energy is charged in the transfer primary coil according to  $E_1$ . When  $Q_1$  is OFF, the energy is output from the secondary transfer as follows.

$L \rightarrow D_1 \rightarrow \text{Load} \rightarrow L$

Then the power is supplied to the Load. When  $Q_1$  is ON, power is not output from the secondary side. The output voltage is fed back in the control circuit according to the error amp rectifier. Then depending on how  $f$  is controlled, stabilization occurs. Also, when the current load becomes too large, in order to decrease the voltage output, the increase in  $f$  is controlled and the output voltage is stabilized.

Therefore, basically the timing:  $f$  of  $Q_1$  controls the output voltage.

$f$  - Load

**[Surge Absorber Circuit]**

This circuit is for absorbing surge voltage generated by the Q1.

**[Control Circuit and Detecting Circuit]**

The control circuit amplifies the output with increased voltage detected in the error detecting circuit. Then it drives the main transistor.

In this power supply, the oscillation frequency(f) of the main transistor is defined by changing the output load.

This is shown as follows.

When the output voltage of the 24V circuit increases, the current of the photo coupler PC101 increases, the pulse width of the output control circuit becomes higher and the ON period of Q101 becomes shorter.

**[Over Current Limiter (O.C.L)]**

The highest drain current (Q1) is limited by controlling f of Q1 of 24V. The 24V output is limited by this circuit.

**[Over Voltage Circuit]**

If the 24V output increases because the error detecting circuit or control circuit is broken, output becomes 0V by turning on the zener diode D105.

**Dummy load method (to quickly check the power supply output)**

Refer to **Power Supply Board Section** (P.109).

## 7 Location of Controls and Components

### 7.1. Overview

- (1) Speaker
- (2) Document guides
- (3) Document feeder tray
- (4) Top cover
- (5) Document exit
- (6) Document entrance
- (7) Top cover release button

## 7.2. Control Panel

### Buttons

#### (1) [CALLER ID]

- To use Caller ID features.

#### (2) [STOP]

- To stop an operation or programming session.
- To erase a character/number. Press and hold to erase all characters/numbers.

#### (3) [FLASH]

- To access special telephone services or for transferring extension calls.

#### (4) [REDIAL]

- To redial the last number dialed. If the line is busy when you make a phone call using the [MONITOR] button, the unit will automatically redial the number up to 5 times.

#### (5) [AUTO ANSWER]

- To turn the auto answer setting ON/OFF.

#### (6) Station keys

- To use one-touch dial feature.

#### (7) [FAX/START]

- To start sending or receiving a fax.

#### (8) [COPY]

- To copy a document.

#### (9) [TONE]

- To change from pulse to tone temporarily during dialling when your line has rotary pulse services.

#### (10) [PAUSE]

- To insert a pause during dialing.

#### (11) [MONITOR]

- To initiate dialing without lifting the handset.

#### (12) [BROADCAST]

- To transmit a document to multiple parties.

#### (13) Navigator/ [VOLUME] [PHONEBOOK]

- To search for a stored item.
- To select features or feature settings during programming.
- To adjust volume.
- To access the phonebook.

#### (14) [SET]

- To store a setting during programming.

#### (15) [MENU]

- To initiate or exit programming.

#### (16) [LOWER]

- To select stations 6-10 for the one-touch dial feature.

## 8 Installation Instructions

### 8.1. Installation Space

The space required to install the unit is shown below.  
The dimensions given are necessary for the unit to operate efficiently.

**Note:**

- Avoid excessive heat or humidity.
- Use the unit within the following ranges of temperature and humidity.
- Ambient temperature: 5°C to 35°C
- Relative humidity: 20% to 80% (without condensation)
- Power cord length should be less than 5 meters. Using a longer cord may reduce the voltage or cause malfunctions.
- Avoid direct sunlight.
- Do not install near devices which contain magnets or generate magnetic fields.
- Do not subject the unit to strong physical shock or vibration.
- Keep the unit clean. Dust accumulation can prevent the unit from functioning properly.
- To protect the unit from damage, hold both sides when you move it.

### 8.2. Connections

**Important:**

- The unit will not function when there is a power failure.  
To make calls in emergency situations, you should connect a telephone that can function during a power failure to the telephone line.

- (1) Power cord
  - Connect to the power outlet (120V, 60 Hz).
- (2) Telephone line cord
  - Connect to **[LINE]** jack and single telephone line jack.
- (3) **[EXT]** jack
  - Remove the stopper if attached.
- (4) Handset cord
- (5) Extension telephone (not included)

**Caution:**

- When you operate this product, the power outlet should be near the product and easily accessible.
- Be sure to use the telephone line cord included in this unit.
- Do not extend the telephone line cord.
- Keep the unit away from walls as far as possible to prevent a recording paper jam.

**Note:**

Before you can make calls, the dialling mode setting may need to be changed.

## 8.3. Installing the Recording Paper

1. Open the top cover by pressing the top cover release button (1).

2. Install the recording paper.

**Correct**

**Incorrect**

3. Insert the leading edge of the paper into the opening above the thermal head (1).

4. Pull the paper out of the unit.

- Make sure that there is no slack in the paper roll.

5. Close the top cover securely by pushing down on both sides.

6. Press **[FAX/START]**, then tear off the excess paper by pulling it towards you.

### Note:

- If the paper is secured with glue or tape, cut approximately 15 cm from the beginning of the roll before installing it.
- When the power cord is connected, a message is printed each time the top cover is opened then closed. If the recording paper is installed upside down, the message will not be printed. Install the paper correctly.
- For accessory information, see **Optional Accessories** (P.9).

**Minimum size****Maximum document size****Effective scanning area**

- Shaded area will be scanned.

**Document weight**

- Single sheet: 45 g/m<sup>2</sup> to 90 g/m<sup>2</sup>
- Multiple sheet: 60 g/m<sup>2</sup> to 80 g/m<sup>2</sup>

**Note:**

- Remove clips, staples or other fasteners.
- Do not send or copy documents that are on the following types of paper: (Make a copy of the document using another copier and send the copy.)
  - Chemically treated paper such as carbon or carbonless duplicating paper
  - Electrostatically charged paper
  - Badly curled, creased or torn paper
  - Paper with a coated surface
  - Paper with a faint image
  - Paper with printing on the opposite side that can be seen through the other side, such as newsprint.
- Check that ink, paste or correction fluid has dried completely.
- To send a document with a width of less than 210 mm, we recommend using a copy machine to copy the original document onto A4 or letter-sized paper, then sending the copied document.

## 9 Operation Instructions

### 9.1 Setting Your Logo

Your logo will be printed on the top of each page sent from your unit. The logo can be your name or the name of your company.

**Note:**

Refer to **Other** (P.9) for display message.

1. Press **[MENU]**.

SYSTEM SETUP  
PRESS [◀ ▶]

2. Press **[◀]** or **[▶]** repeatedly to display the following.

YOUR LOGO  
PRESS SET

3. Press **[SET]**.

- The cursor (■) will appear on the display.

LOGO=■

4. Enter your logo, up to 30 characters. See the following character table below for details.

5. Press **[SET]**.

- The next feature will be displayed.

6. Press **[MENU]**.

### To select characters with dial keypad

Keypad	Characters
[1]	Space # & ' ( ) * , - . / 1
[2]	A B C 2 a b c 2
[3]	D E F 3 d e f 3
[4]	G H I 4 g h i 4
[5]	J K L 5 j k l 5
[6]	M N O 6 m n o 6
[7]	P Q R S 7 p q r s 7
[8]	T U V 8 t u v 8
[9]	W X Y Z 9 w x y z 9
[0]	Space Ñ ñ á é í ó ú 0
[*]	To change uppercase or lowercase letter.
[FLASH]	To enter a hyphen.
[STOP]	To delete a digit.

#### Note:

To enter another character that is located on the same dial key, press **[▶]** to move the cursor to the next space.

If you select “**PORTUGUESE**” for the language, you can select the following characters using **[0]**.

[0]	Space Ã Ö Ç ã õ ç Á É Í Ó Ú á é í ó ú 0
-----	---

### To enter your logo

**Example:** “BILL”

- Press **[2]** 2 times.

LOGO=B

- Press **[4]** 3 times.

LOGO=BI

- Press **[5]** 3 times.

LOGO=BI

- Press **[▶]** to move the cursor to the next space and press **[5]** 3 times.

LOGO=BI

### To change uppercase or lowercase letters

Pressing the **[\*]** button will change to uppercase or lowercase letters alternately.

- Press **[2]** 2 times.

LOGO=B

- Press **[4]** 3 times.

LOGO=BI

- Press **[\*]**.

LOGO=Bi

- Press **[5]** 3 times.

LOGO=Bi

### To correct a mistake

- Press **[◀]** or **[▶]** to move the cursor to the incorrect character.
- Press **[STOP]**.
  - To erase all characters, press and hold **[STOP]**.
- Enter the correct character.

### To select characters using **[+]** or **[—]**

Instead of pressing the dial keys, you can select characters using **[+]** or **[—]**.

- Press **[—]** repeatedly to display the desired character. Characters will be displayed in the following order:
  - Uppercase letters
  - Number
  - Symbol
  - Lowercase letters
  - If you press **[+]**, the order will be reversed.
- Press **[▶]** to insert the character.
- Return to step 1 to enter the next character.

# 10 Test Mode

The codes listed below can be used to perform simple checks for some of the unit's functions. When complaints are received from customers, they provide an effective tool for identifying the locations and causes of malfunctions. To do this, you set the Service mode (Refer to **Operation Flow** (P.56).) first, then operate the below test items.

Test Mode	Type of Mode	Code	Function
		Operation after code input	
FACTORY SET	Service Mode	"5" "5" "0" SET	Refer to <b>Memory Clear Specification</b> (P.58).
FLASH MEMORY CHECK	Service Mode	"5" "5" "1" SET	Indicates the version and checks the sum of the FLASH MEMORY.
MODEM TEST	Service Mode	"5" "5" "4" SET	Telephone line circuit is connected automatically, output the following signals on the circuit line. 1) OFF 2) 9600bps 3) 7200bps 4) 4800bps 5) 2400bps 6) 300bps 7) 2100Hz 8) 1100Hz
SCAN CHECK	Service Mode	"5" "5" "5" SET	Turns on the LEDs of the CIS and operates the read systems. Refer to <b>CIS (Contact Image Sensor) Section</b> (P.114).
MOTOR TEST	Service Mode	"5" "5" "6" SET	Rotates the transmission and reception motor to check the operation of the motor. 12: FAX TX / Reading memory 52: Recording paper is fed 22: Copy 44: Recording Paper reverse  Press <b>[STOP]</b> button to quit.
LED CHECK	Service Mode	"5" "5" "7" SET	All LEDs above the operation panel board flash on and off, or are illuminated.
LCD CHECK	Service Mode	"5" "5" "8" SET	Checks the LCD indication. Illuminates all the dots to check if they are normal. Refer to <b>Operation Panel Section</b> (P.112).
KEY CHECK	Service Mode	"5" "6" "1" START (any key)	Checks the button operation. Indicates the button code on the LCD while the button is pressed. Refer to <b>Button Code Table</b> (P.55). Refer to <b>Operation Panel Section</b> (P.112).
MEMORY CLEAR (except History data)	Service Mode	"7" "1" "0" SET	Refer to <b>Memory Clear Specification</b> (P.58).
SENSOR CHECK	Service Mode	"8" "1" "5" SET	If you enter this mode and operate sensor levers with your hands, the LCD display of the related sensor (or switch) turns ON / OFF. Also, when copying a document, the related sensor will turn ON / OFF. For each sensor's operation, refer to <b>Sensors and Switches</b> (P.26). <u>Do Sn Co Jm</u> : LCD DISPLAY <b>Do: Document set sensor</b> :Paper inserted. Turns on when a document is inserted. <b>Sn: Read position sensor.</b> :At the read position, turns on when the front cover is opened and the sensor lever is pressed directory. <b>Co: Cover open sensor</b> :Turns on and off when the front cover is opened and closed. <b>Jm: JAM sensor</b> :When JAM sensor is on "Jm" functions.
PRINT TEST PATTERN	Service Mode	"8" "5" "2" SET	Prints out the test pattern. Used mainly at the factory to test the print quality. You can select 1~9. (See <b>Print Test Pattern</b> (P.55))

## Note:

The numbers in the boxes (XXX) indicate the keys to be input for the various test modes.

## 10.1. DTMF Single Tone Transmit Selection

When set to ON (=1), the 12 keys and transmission frequencies are as shown.

key	High Frequency (Hz)	key	Low Frequency (Hz)
"1"	697	"5"	1209
"2"	770	"6"	1336
"3"	852	"7"	1477
"4"	941	"8"	1633

High (Hz) Low (Hz)	1209	1336	1477
697	"1"	"2"	"3"
770	"4"	"5"	"6"
852	"7"	"8"	"9"
941	"X"	"0"	"#"

When set to OFF (=2), the 12 keys and transmission frequencies are as shown.

### Note:

After performing this check, do not forget to turn the setting off.

Otherwise, dialing in DTMF signal will not work.

## 10.2. Button Code Table

Code	Button Name	Code	Button Name	Code	Button Name
04	FAX /START	31	1	3D	PAUSE
05	LOWER	32	2	3E	FLASH (RECALL)
06	COPY	33	3	47	CALLER ID
08	MONITOR	34	4	64	STATION 1
0C	AUTO ANSWER	35	5	65	STATION 2
0F	REDIAL	36	6	66	STATION 3
1E	[▶] NEXT	37	7	67	STATION 4
1F	[◀] PREV	38	8	68	STATION 5
		39	9	00	NO INPUT
20	MENU	3A	0	Exit	STOP
25	[+] VOLUME	3B	X	F8	SET
26	[-] VOLUME	3C	#	FA	BROADCAST

## 10.3. Print Test Pattern

# 11 Service Mode

The programming functions are used to program the various features and functions of the machine, and to test the machine. This facilitates communication between the user and the service man while programming the unit.

## 11.1. Programming and Lists

### 11.1.1. Operation

There are 2 basic categories of programming functions, the User Mode and the Service Mode. The Service Mode is further broken down into the normal and special programs. The normal programs are those listed in the Operating Instructions and are available to the user. The special programs are only those listed here and not displayed to the user. In both the User and Service Modes, there are Set Functions and Test Functions. The Set Functions are used to program various features and functions, and the Test Functions are used to test the various functions. The Set Functions are accessed by entering their code, changing the appropriate value, then pressing the SET key. The Test Functions are accessed by entering their code and pressing the key listed on the menu. While programming, to cancel any entry, press the STOP key.

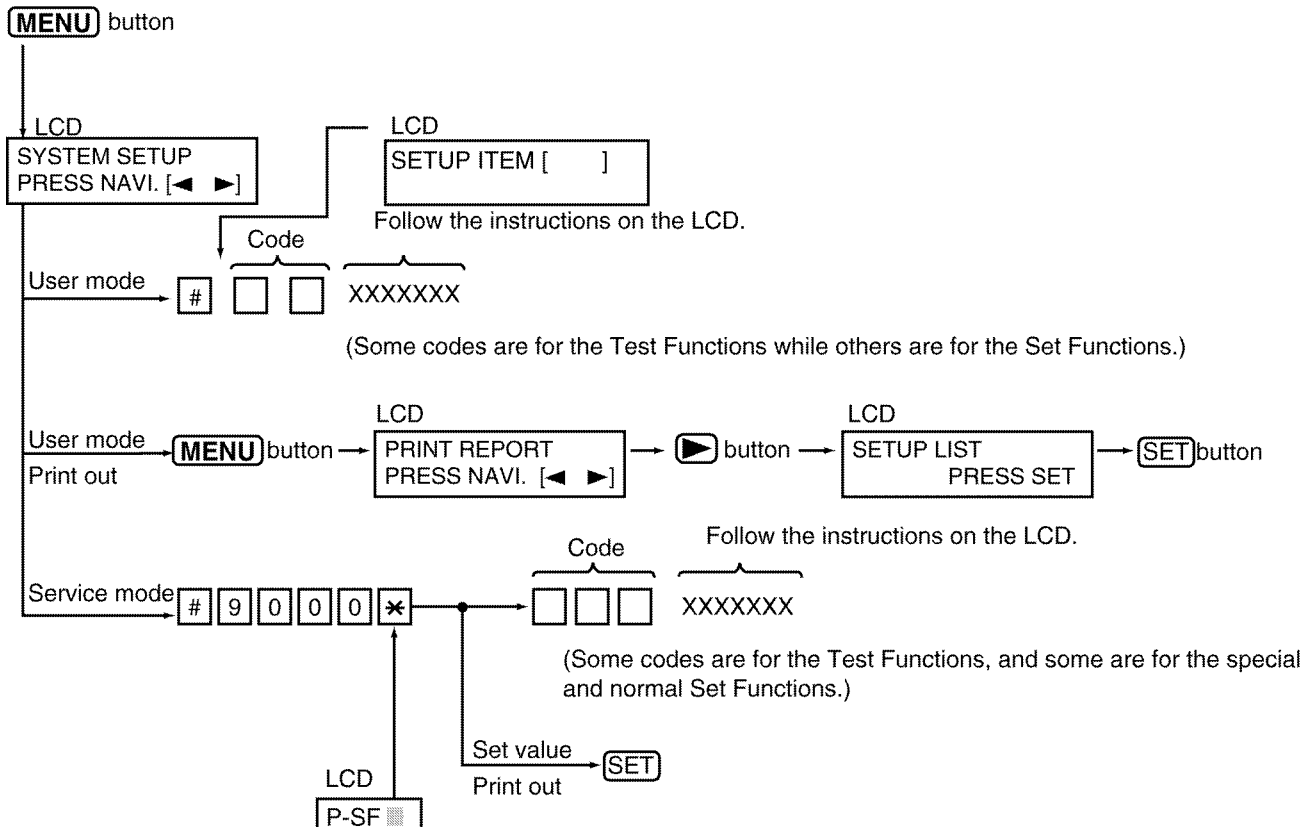

### 11.1.2. Operation Flow

#### Note:

Refer to **Other** (P.9) for display message.

#### Operating Procedure

### 11.1.3. Service Function Table

Code	Function	Set Value	Effective Range	Default	Remarks
501	Pause time	X 100 msec	001~600	50	-----
502	Flash time	X 10 ms	01~99	70	-----
503	Dial speed select	1: 10 pps 1: 20 pps	1, 2	1	-----
514	Bell detection time	X 100 msec	1~9	6	-----
520	CED frequency select	1:2100Hz 2:1100 Hz	1, 2	1	See Symptom/Countermeasure Table for long distance and international calls in <b>The unit can copy, but cannot transmit/receive</b> (P.82).
521	International mode select	1:ON 2:OFF	1, 2	1	See Symptom/Countermeasure Table for long distance and international calls in <b>The unit can copy, but cannot transmit/receive</b> (P.82).
522	Auto standby select	1:ON 2:OFF	1, 2	1	The resolution reverts to the default when transmission is complete.
523	Receive equalizer select	1: 0 km 2: 1.8 km 3: 3.6 km 4: 7.2 km	1~4	1	When the telephone station is far from the unit or reception cannot be performed correctly, adjust accordingly.
524	Transmission equalizer select	1: 0 km 2: 1.8 km 3: 3.6 km 4: 7.2 km	1~4	1	When the telephone station is far from the unit or transmission cannot be performed correctly, adjust accordingly.
544	Document feed position adjustment value set	1: 3 mm 2: 4 mm 3: 5 mm 4: 6 mm 5: 7 mm	1~5	3	If it is difficult to feed documents, raise the set value. If multi documents feed occurs, lower the set value.
550	Memory Clear				See <b>Memory Clear Specification</b> (P.58).
551	ROM check				See <b>Test Mode</b> (P.54).
552	DTMF single tone test	1:ON 2:OFF	1, 2	2	See <b>Test Mode</b> (P.54).
553	Monitor on FAX communication select	1:OFF 2:PHASE B 3:ALL	1~3	1	Sets whether to monitor the line signal with the unit's speaker during FAX communication or not.
554	Modem test				See <b>Test Mode</b> (P.54).
555	Scan check				See <b>Test Mode</b> (P.54).
556	Motor test			0	See <b>Test Mode</b> (P.54).
557	LED test				See <b>Test Mode</b> (P.54).
558	LCD test				See <b>Test Mode</b> (P.54).
559	Document jam detection select	1:ON 2:OFF	1, 2	1	See <b>Test Mode</b> (P.54).
561	KEY test				See <b>Test Mode</b> (P.54).
570	BREAK % select	1:61% 2:67%	1, 2	1	Sets the % break of pulse dialing according PBX.
571	ITS auto redial time set	X number of times	00~99	05	Selects the number of times that ITS is redialed (not including the first dial).
572	ITS auto redial line disconnection time set	X second	001~999	065	Sets the interval of ITS redialing.
573	Remote turn-on ring number set	X number of rings	01~99	10	Sets the number of rings before the unit starts to receive a document in the TEL mode.
590	FAX auto redial time set	X number of times	00~99	05	Selects the number of redial times during FAX communication (not including the first dial).
591	FAX auto redial time disconnection time set	X second	001~999	065	Sets the FAX redial interval during FAX communication.
592	CNG transmit select	1:OFF 2:ALL 3:AUTO	1~3	2	Lets you select the CNG output during FAX transmission. ALL: CNG is output at phase A. AUTO: CNG id output only when automatic dialing is performed. OFF: CNG id not output at phase A. Refer to <b>Sometime there is a transmit problem</b> (P.80).
593	Time between CED and 300bps	1:75 msec 2:500 msec 3:1 sec	1~3	1	See <b>Symptom/Countermeasure Table</b> for long distance and international calls in <b>The unit can copy, but cannot transmit/receive</b> (P.82). Refer to Receive Problem(P.81) and <b>The unit can copy, but cannot transmit/receive</b> (P.82).
594	Overseas DIS detection select	1:detects at the 1st time  2:detects at the 2nd time	1, 2	1	See <b>Symptom/Countermeasure Table</b> for long distance and international calls in <b>The unit can copy, but cannot transmit/receive</b> (P.82). Refer to <b>Sometime there is a transmit problem</b> (P.80) and <b>The unit can copy, but cannot transmit/receive</b> (P.82).

Code	Function	Set Value	Effective Range	Default	Remarks
595	Receive error limit value set	1: 5 % 2: 10 % 3: 15 % 4: 20 %	1~4	2	Sets the number of acceptable error lines when the FAX reconstructs the received data. Refer to <b>Receive Problem</b> (P.81).
596	Transmit level set	10 = -10 dBm	00~15	10	Selects the FAX transmission level. Refer to <b>Sometime there is a transmit problem</b> (P.80) and <b>Receive Problem</b> (P.81).
598	Receiving sensitivity	43 = -43 dBm	20~48	42	Used when there is an error problem. Refer to <b>The unit can copy, but cannot either transmit/receive long distance or international communications</b> (P.83).
710	Memory clear except History data				Refer to <b>Memory Clear Specification</b> (P.58).
717	Transmit speed selection	1:9600BPS 2:7200BPS 3:4800BPS 4:2400BPS	1~4	1	Adjusts the speed to start training during FAX transmission. Refer to <b>Sometime there is a transmit problem</b> (P.80) and <b>The unit can copy, but the transmission and reception image are incorrect</b> (P.85).
718	Receive speed selection	1:9600BPS 2:7200BPS 3:4800BPS 4:2400BPS	1~4	1	Adjusts the speed to start training during FAX reception. Refer to <b>Receive Problem</b> (P.81) and <b>The unit can copy, but the transmission and reception image are incorrect</b> (P.85).
722	Redial tone detect	1:ON 2:OFF	1, 2	1	Sets the tone detection mode after redialing.
745	Power ON film feed	1:ON 2:OFF	1, 2	1	Invalid function for thermal model.
763	CNG detect time for friendly reception	1:10 sec 2:20 sec 3:30 sec	1~3	3	Selects the CNG detection tone of friendly reception.
774	T4 timer	X 100 msec	00~99	00	Use this function when delay occurs in the line and communication (ex. Mobile comm) does not work well.
815	Sensor check				See <b>Test Mode</b> (P.54).
852	Print test pattern				See <b>Test Mode</b> (P.54).
853	Top margin		1~9	3	=====
874	DTMF ON time	X msec	60~20	10	=====
875	DTMF OFF time	X msec	60~20	10	=====
880	History list				=====
881	Journal 2 list				See <b>Special service journal reports</b> (P.75).
882	Journal 3 list				See <b>Special service journal reports</b> (P.75).
961	The time transmitting the false ring back tone	X sec	01~10	05	Set the time transmitting the false ring back tone to the line in TEL/FAX mode.
962	The operator calling time	X sec	05~30	13	Set the operator calling time through the speaker in TEL/FAX mode.

#### 11.1.4. Memory Clear Specification

Item	Status after Memory Clear	
	Service Mode #550 <sup>*1</sup>	Service Mode #710 <sup>*2</sup>
Date and time (user mode #001)	—	Default
Your logo (user mode #002)	—	Default
Your Fax Number (user mode #003)	—	Default
One touch dial and Directory	—	Default
History	—	—
Top margin (service mode #853)	—	—
Other Setting data (User setting and Service setting data)	Default	Default

— : Not changed

<sup>\*1</sup> Execute Service Mode #550 when you want to reset the all setting data keeping the user information.

<sup>\*2</sup> Execute Service Mode #710 to clear the user information in case that Main Unit is recycled.

**Note:**

Please restart a power supply after clearing a memory.

## 11.2. The Example of the Printed List

### 11.2.1. User Mode (Example of a printed out list)

#### LISTA DE ADJUSTE

##### [ CARACTERÍSTICAS BÁSICAS ]

#### Note:

See the following descriptions of this report. Item No. (1) ~ (44) are corresponding to the listed items in **Descriptions of the History Report** (P.62).

### 11.2.3.1. Descriptions of the History Report

(1) SOFTWARE VERSION

FLASH ROM version

(2) SUM

FLASH ROM internal data calculation.

(3) YOUR LOGO

The user logo recorded in the unit. If it is not recorded, NONE will be displayed.

(4) YOUR TELEPHONE NUMBER

The user telephone number recorded in the unit. If it is not recorded, NONE will be displayed.

(5) FAX PAGER NUMBER

If you program a pager number into the unit, the pager number will be displayed here.

(6) FACTORY - CUSTOMER

This shows how many days from factory production until the user turns ON the unit.

(7) MONTH

The shows the very first month, date, year and time set by the user after they purchased the unit.

(8) DAY

The shows the very first month, date, year and time set by the user after they purchased the unit.

(9) YEAR

The shows the very first month, date, year and time set by the user after they purchased the unit.

(10) TIME

The shows the very first month, date, year and time set by the user after they purchased the unit.

(11) USAGE TIME

The amount of time the unit has been powered ON.

(12) FACTORY - NOW

This shows how many days from factory production until the user prints out this history list.

(13) TEL MODE

The amount of time the TEL mode setting was used.

(14) FAX ONLY MODE

The amount of time the FAX mode setting was used.

(15) TEL/FAX MODE

The amount of time the TEL/FAX mode setting was used.

(16) Not used

(17) FINAL RECEIVE MODE

The last set receiving mode by the user.

(18) TONE/PULSE SELECTION

The most recently used setting used, either TONE or PULSE.

(19) RECEIVE REDUCTION

The compression rate when receiving.

(20) SETTING NO. OF DIRECTORY

The recorded directory stations.

(21) NUMBER OF COPY

The number of pages copied.

(22) NUMBER OF RECEIVE

The number of pages received.

(23) NUMBER OF SENDING

The number of pages sent.

(24) NUMBER OF CALLER ID

The number of times Caller ID was received.

(25) Not used

(26)~(29) Not Used

(30) NUMBER OF PRINTING WARNING LIST

The number of warning lists printed until now.

(31) Not used

(32) NUMBER OF DIVIDED PRINTING IN FAX RECEPTION

The number of faxes received that were divided into more than one sheet since the unit was purchased.

(33) Not used

(34) Not used

(35) MAN RCV

Means the unit received a fax message by manual operation.

(36) FRN RCV

Means the unit received a fax message by friendly signal detection.

(37) VOX

Means the unit detected silence or no voice.

(38) RMT DTMF

Means the unit detected DTMF (Remote Fax activation code) entered remotely.

(39) PAL DTMF

Means the unit detected DTMF (Remote Fax activation code) entered by a parallel connected telephone.

(40) TURN-ON

Means the unit started to receive after 10 rings. (Remote Turn On: Service Code #573)

(41) TIME OUT

Means the unit started to receive after Ring Time Out in the EXT-TAM or TEL/FAX mode.

(42) IDENT

Means the unit detected Ring Detection.

(43) Not used

(44) Not used

# 12 Troubleshooting Guide

## 12.1. Troubleshooting summary

### 12.1.1. Troubleshooting

After confirming the problem by asking the user, troubleshoot according to the instructions and observe the following precautions.

### 12.1.2. Precautions

1. If there is a problem with the print quality or the paper feed, first check if the installation space and the print paper meets the specifications, the paper selection lever/paper thickness lever is set correctly, and the paper is set correctly without any slack.
2. Before troubleshooting, first check that the connectors and cables are connected correctly (not loose).  
If the problem occurs randomly, check it very carefully.
3. When connecting the AC power cord with the unit and checking the operation, exercise utmost care when handling electric parts in order to avoid electric shocks and short-circuits.
4. After troubleshooting, double check that you have not forgotten any connectors, left any loose screws, etc.
5. Always test to verify that the unit is working normally.

## 12.2. Error Messages-Display

If the unit detects a problem, one or more of the following messages will appear on the display.

The explanations given in the [ ] are for servicemen only.

### Note:

Refer to **Error Message (Display)** (P.10) for display message.

#### “CALL SERVICE”

- There is something wrong with the unit.  
[This error is displayed when the thermal head does not warm up. Check the thermistor on the thermal head and connector lead.]

#### “CHECK DOCUMENT”

- The document was not fed into the unit properly. Re-insert the document. If misfeeding occurs frequently, clean the document feeder rollers and try again.  
(Refer to **Document Jams - Sending** (P.136).)
- Attempted to send a document longer than 600 mm. Press **[STOP]** to remove the document. Divide the document into two or more sheets and try again.  
[Alternately, turn off service code #559 to enable sending of documents longer than 600 mm] (Refer to **Service Function Table** (P.57).)

#### “CHECK MEMORY”

- Memory (telephone numbers, parameters, etc.) has been erased. Re-program.

#### “COVER OPEN”

#### “CHECK PAPER”

- The cover is open. Close it and press **[FAX/START]** to clear the message.
- The unit has run out of recording paper. Install recording paper and press **[FAX/START]** to clear the message.

#### “FAX IN MEMORY”

- The unit has a document in memory. See the other displayed message instructions to print out the document. For fax memory capacity, (Refer to **Specifications** (P.8)).

#### “FAX MEMORY FULL”

- The memory is full of received documents due to lack of recording paper or a recording paper jam. Install paper or clear the jammed paper. (Refer to **Jams** (P.136).)
- When performing broadcast transmission, the document being stored exceeded the memory capacity of the unit. Send the entire document manually.

#### “MEMORY FULL”

- There is no space to store new items in the phonebook.

Erase unnecessary items.

#### “MODEM ERROR”

- There is something wrong with the unit's modem.  
[Refer to #554 on **Test Mode** (P.54) and **Digital Board Section** (P.99)]

#### “NO FAX REPLY”

- The other party's fax machine is busy or has run out of recording paper. Try again.

#### “PAPER JAMMED”

- A recording paper jam occurred. Clear the jammed paper. (Refer to **Jams** (P.136).)

#### “PLEASE WAIT”

- The unit is checking and initializing the paper cutter. Wait for a moment while the check is completed.

#### “POLLING ERROR”

- The other party's fax machine does not support polling. Check with the other party.

#### “REDIAL TIME OUT”

- The other party's fax machine is busy or has run out of recording paper. Try again.

#### “REMOVE DOCUMENT”

- The document is jammed. Remove the jammed document. (Refer to **Document Jams - Sending** (P.136).)
- Press **[STOP]** to eject the jammed document.

#### “SYSTEM IS BUSY”

- The system is busy. Replace the handset or stop using monitor, then try again.

#### “TRANSMIT ERROR”

- A transmission error occurred. Try again.

#### “UNIT OVERHEATED”

- The unit is too hot. Stop using the unit for a while and let the unit cool down.

## 12.3. Error Messages Report

### 12.3.1. Journal Report

1. Press **[MENU]** repeatedly to display "PRINT REPORT".
2. Press **[◀]** or **[▶]** until the "JOURNAL REPORT" is displayed.
3. Press **[SET]**.
4. The report is printed out.

**Note:**

Refer to **Error Message (Report)** (P.9) for display message.

(1) CODE	(2) RESULT	(3) MODE	SYMPTOM	Counter-measure*
	PRESSED THE STOP KEY	SND & RCV	Communication was interrupted by the STOP button.	
	DOCUMENT JAMMED	SND	The document paper is jammed.	
	NO DOCUMENT	SND	No document paper.	
	OTHER FAX NOT RESPONDING	SND	Transmission is finished when the T1 TIMER expires.	1
28	COMMUNICATION ERROR	SND & RCV	-----	
41	COMMUNICATION ERROR	SND	DCN is received after DCS transmission.	2
42	COMMUNICATION ERROR	SND	FTT is received after transmission of a 2400BPS training signal.	3
43	COMMUNICATION ERROR	SND	No response after post message is transmitted three times.	4
44	COMMUNICATION ERROR	SND	RTN and PIN are received.	5
46	COMMUNICATION ERROR	RCV	No response after FTT is transmitted.	6
48	COMMUNICATION ERROR	RCV	No post message.	7
49	COMMUNICATION ERROR	RCV	RTN is transmitted.	8
50	COMMUNICATION ERROR	RCV	PIN is transmitted (to PRI-Q).	8
51	COMMUNICATION ERROR	RCV	PIN is transmitted.	8
	OTHER FAX NOT RESPONDING	RCV	Reception is finished when the T1 TIMER expires.	9
54	ERROR-NOT YOUR UNIT	RCV	DCN is received after DIS transmission.	11
58	COMMUNICATION ERROR	RCV	DCN is received after FTT transmission.	13
59	ERROR-NOT YOUR UNIT	SND	DCN responds to the post message.	14
64	COMMUNICATION ERROR	POL.RX	Polling is not possible.	15
65	COMMUNICATION ERROR	SND	DCN is received before DIS reception.	2
65	COMMUNICATION ERROR	RCV	Reception is not EOP, EOM PIP, PIN, RTP or RTN.	2
68	COMMUNICATION ERROR	RCV	No response at the other party after MCF or CFR is transmitted.	13
70	ERROR-NOT YOUR UNIT	RCV	DCN is received after CFR transmission.	13
72	COMMUNICATION ERROR	RCV	Carrier is cut when the image signal is received.	16
	MEMORY FULL	RCV	The document was not received due to memory full.	
	CANCELLED	SND	The multi-station transmission was rejected by the user.	
FF	COMMUNICATION ERROR	SND & RCV	Modem error. For the DCN, DCN, etc. abbreviations, refer to <b>Modem Section</b> (P.30).	12

SND=TRANSMISSION RCV=RECEPTION

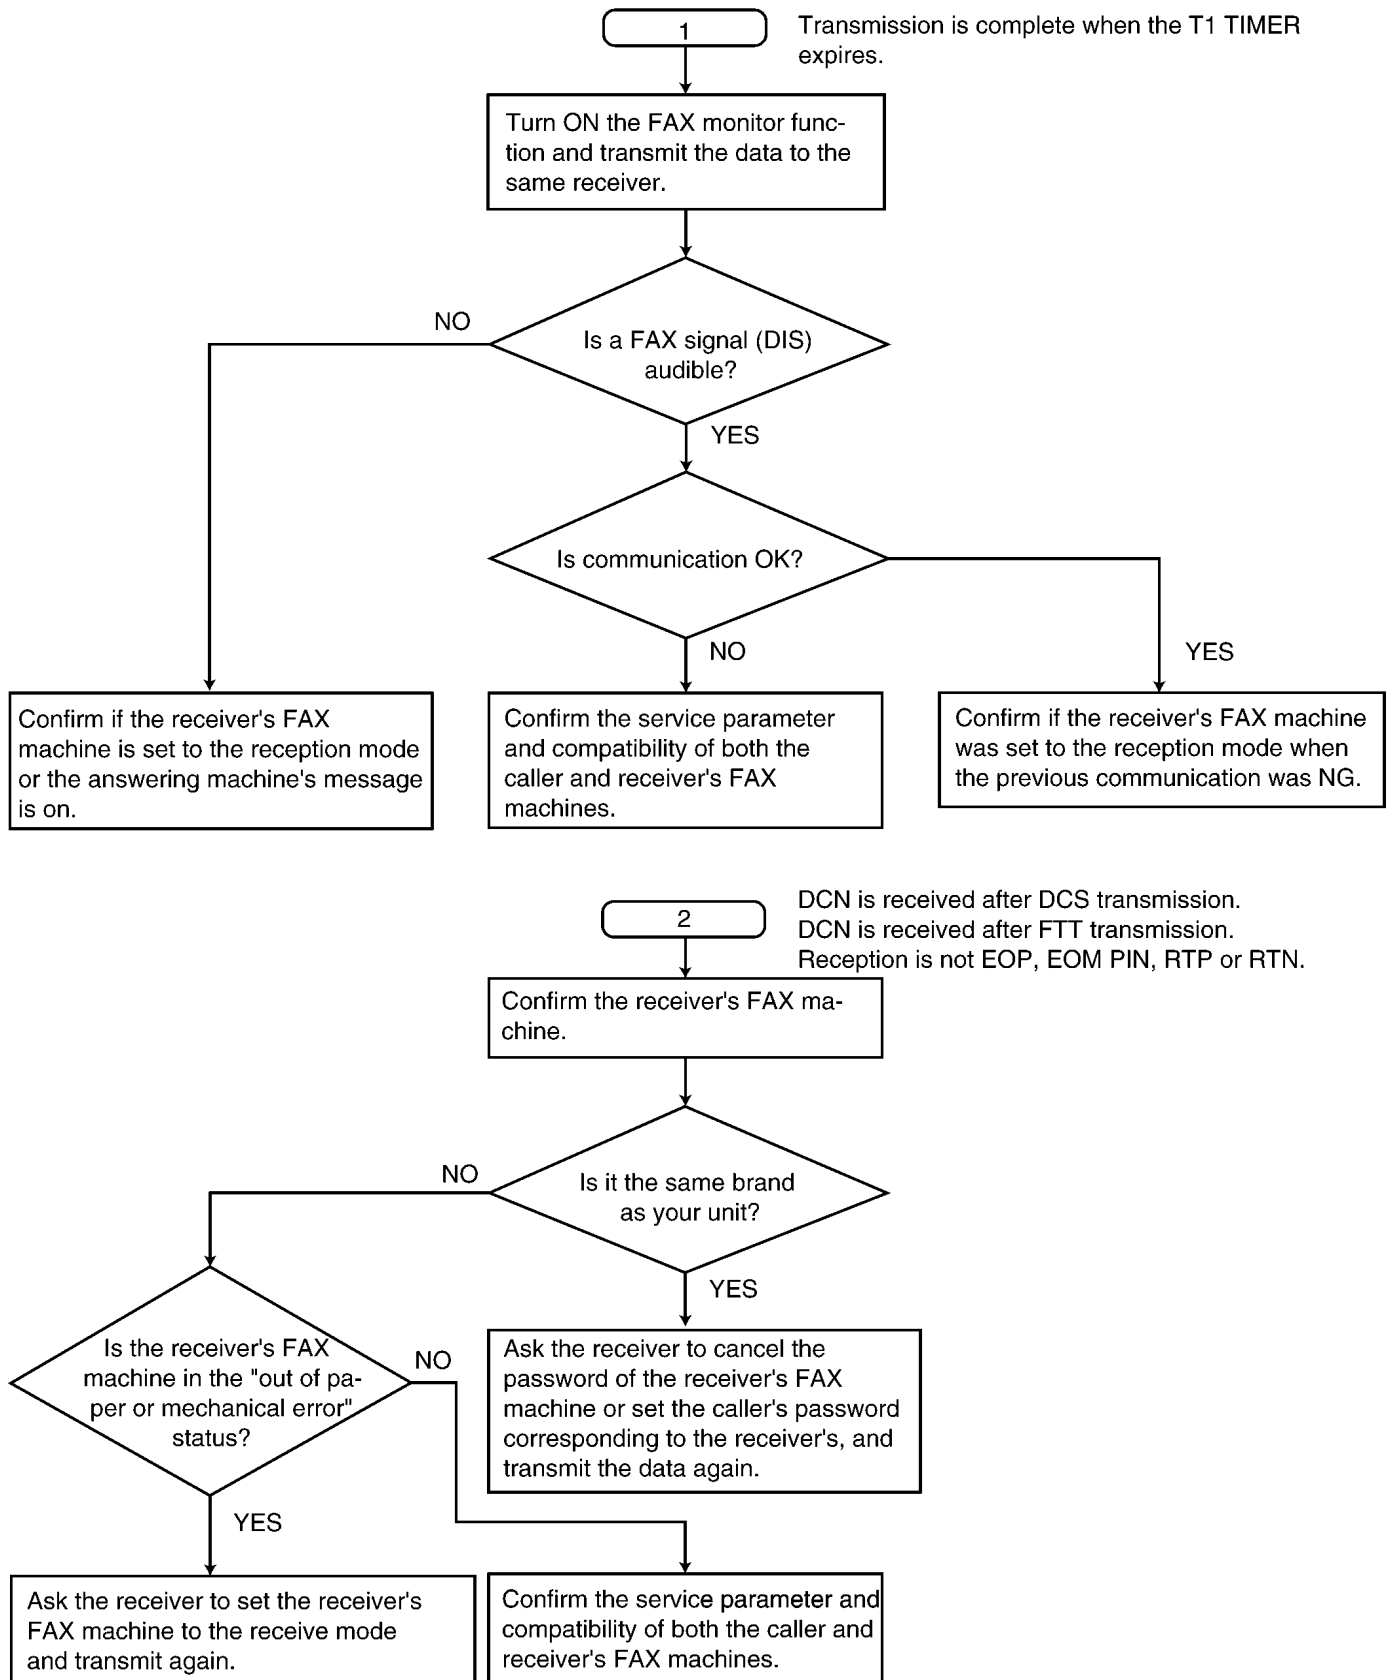

Most fax communication problems can be resolved by the following steps.

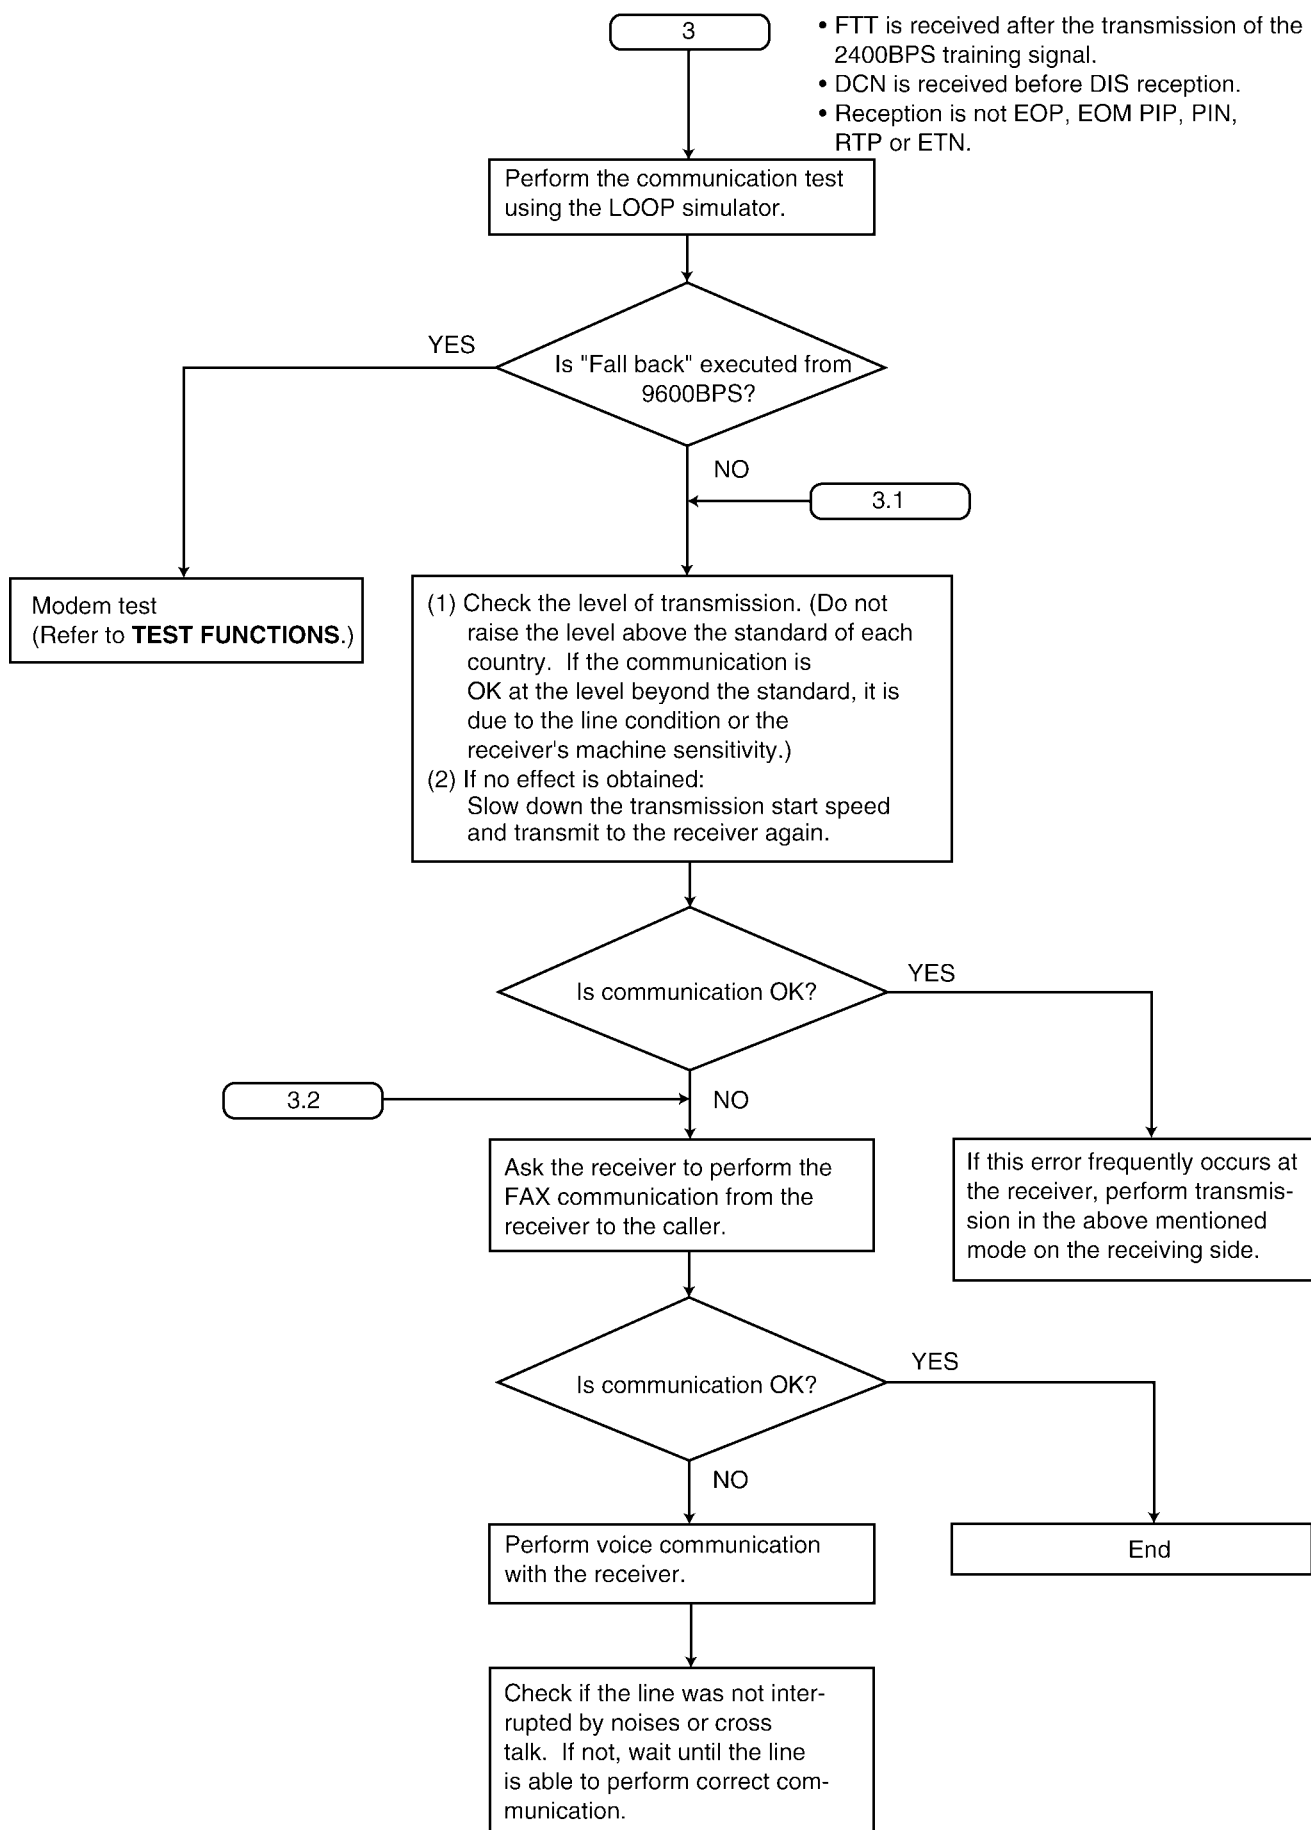

1. Change the transmit level. (Service code: 596, refer to **Service Function Table**(P.57).)
2. Change the TX speed/RX speed. (Service code: 717/718, refer to **Service Function Table** (P.57).)

**Note\*:**

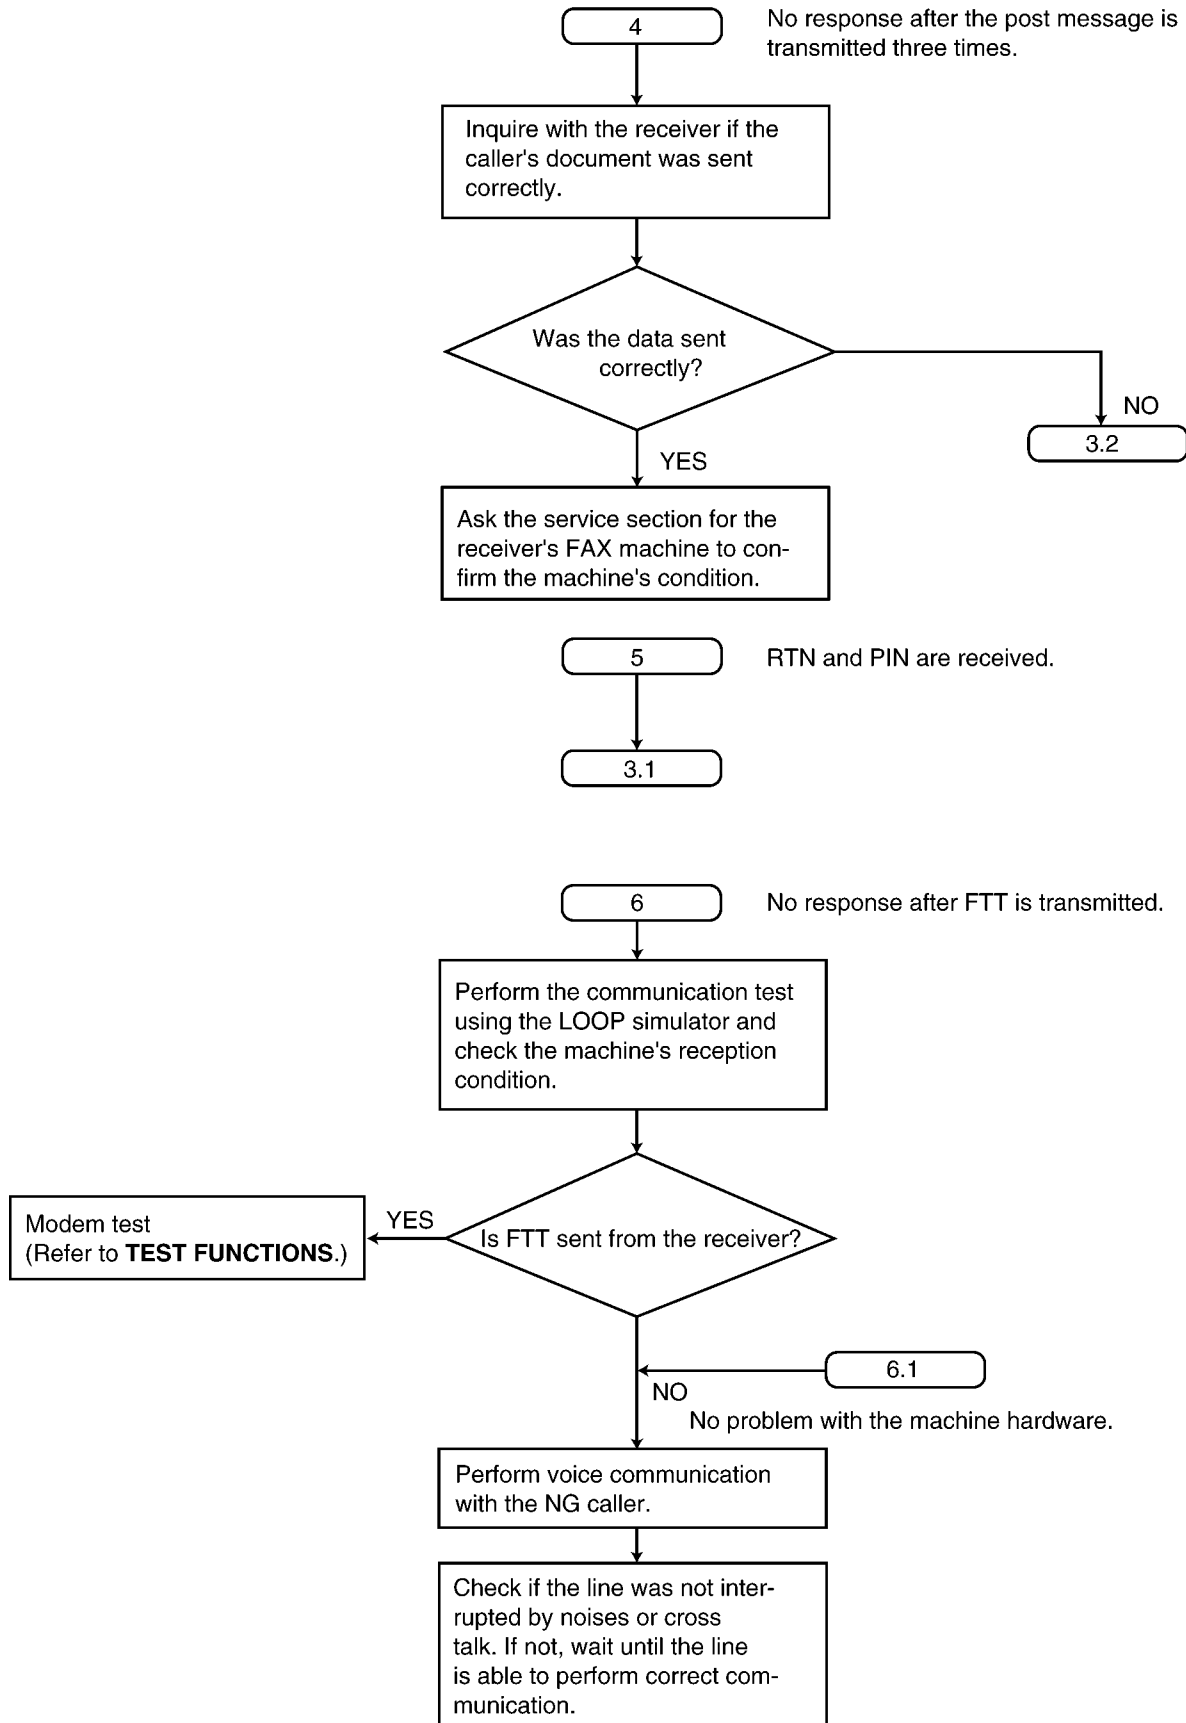

If the problem remains, see the following "**Countermeasure**" flow chart.

### 12.3.2. Special service journal reports

Journal 2 and Journal 3 shown below, which are special journals giving the additional detailed information about the latest 30 communications, can be printed by Service Code 881 or 882. Remote printing function for the journal reports (JOURNAL, JOURNAL 2 and JOURNAL 3) is also available for service technicians. (Refer to **Remote Programming**(P.87).) The JOURNAL report only gives you basic information about a communication, but the other two journal reports provide different information on the same item (communication).

#### HOW TO READ JOURNAL REPORTS:

##### Example:

- Look at **NO. 01** in the JOURNAL. If you want to know about the details about that item, see **NO. 01** in the JOURNAL 2 and the JOURNAL 3. You can get the following information.
    - \* MODE: Fax transmission
    - \* RCV. MODE: TEL
    - \* TX SPEED: 9.6 kbps
    - \* RESOLUTION: standard
    - \* ENCODE: MH
    - \* MAKER CODE: 79
  - Look at **NO. 04** in the JOURNAL 2. CNG (0003) indicates that the CNG signal has been received three times since the purchase date.
- For further details, see **Journal 2**(P.76) and **Journal 3**(P.77).

### 12.3.2.1. Journal 2

Refer to JOURNAL 2 in **Printout Example**(P.77).

Journal 2 displays the additional detailed information about the last 30 communications.

#### Descriptions:

##### (1) RCV. MODE

Indicates which receive mode the unit was in when the unit received a fax message.

This information is also displayed when the unit transmitted a fax message.

##### (2) SPEED

Indicates the speed of the communication. If multiple pages are transmitted or received, it indicates the last page's communication speed. If there is a communication error, "?" is displayed.

##### (3) RESOLUTION

Indicates the resolution of the communication. If multiple pages are transmitted or received, it indicates the last page's resolution. If there is a communication error, "?" is displayed.

##### (4) RCV-TRIG. (CNT.)

Indicates the trigger that causes the unit to switch to the fax receive mode. The available options are listed in JOURNAL 2 in **Printout Example**(P.77). The values in parentheses indicate how many times the trigger has been used. (For example, "0003" means three times.)

No.	Display	Function
1	FAX MODE	Means the unit received a fax message in the FAX mode.
2	MAN RCV	Means the unit received a fax message by manual operation.
3	FRN RCV	Means the unit received a fax message by friendly signal detection.
4	VOX	Means the unit detected silence or no voice.
5	RMT DTMF	Means the unit detected DTMF (Remote Fax activation code) entered remotely.
6	PAL DTMF	Means the unit detected DTMF (Remote Fax activation code) entered by a parallel connected telephone.
7	TURN-ON	Means the unit started to receive after 10 rings. (Remote Turn On: Service Code #573)
8	TIME OUT	Means the unit started to receive after Ring Time Out in the EXT-TAM or TEL/FAX mode.
9	IDENT	Means the unit detected Ring Detection.
10	CNG OGM	Means the unit detected the CNG while it was sending the Dummy Ring Back Tone in the TEL/FAX mode. OR Means the unit detected the CNG while it was sending the OGM in the ANS/FAX mode.
11	CNG ICM	Means the unit detected the CNG while it was recording the ICM in the ANS/FAX mode.

##### (5) ERROR→MEMORY

Indicates the reason why the unit received a fax message in memory.

If you look at No.11 in the JOURNAL 2 in **Printout Example**(P.77), it shows the fax message was received in memory due to "PAPER OUT" error.

#### NO RESPONSE DISAPPEARED ON JOURNAL

The "**NO RESPONSE DISAPPEARED ON JOURNAL**" displays the information about the last 10 communications terminated by "No Response". (Some of the communications terminated by "No Response" were not displayed in the JOURNAL.)

When a fax transmission cannot be performed because the other party's unit is set to the TEL mode, "No response" will be printed.

### 12.3.2.2. Journal 3

Refer to JOURNAL 3 in **Printout Example** (P.77).

#### Descriptions:

##### (6) ENCODE

Compression Code: MH/MR

##### (7) MSLT

MSLT means Minimum Scan Line Time. Used only at the factory.

##### (8) EQM

EQM means Eye Quality Monitor. Used only at the factory.

##### (9) ERROR LINE(RX)

When an error occurs while receiving a fax, this shows the number of error lines.

##### (10) MAKER CODE

This shows a 2 digit code of the other party's fax machine brand.

0E: "KX" model

00: Unknown

79: "UF" model

19: "Xerox" model

### 12.3.2.3. Printout Example

#### JOURNAL 2

01 ENE. 2006 12:13AM

NO.	RCV MODE	SPEED (CNT.)	RESOLUTION	RCV-TRIG. (CNT.)	ERROR->MEMORY
01	FAX ONLY	9600BPS	STD.	FAX MOD	
02	FAX ONLY	9600BPS	FINE.		
03	TEL/FAX	9600BPS	STD.	FAX MOD	COVER OPEN
04	TEL/FAX	?	?		

#### NO RESPONSE DISAPPEARED ON JOURNAL

NO.	START TIME	RCV MODE	RCV-TRIG. (CNT.)
01	01 ENE. 12:13AM	TEL	MAN RCV (00001)

YOUR LOGO : ADMJTWPGJA  
YOUR FAX NO. : 325417896085

#### JOURNAL 3

01 ENE. 2006 12:14AM

NO.	ENCODE	MSLT	EQM(RX)	ERROR LINE(RX)	MAKER CODE
01	MR	10msec	0000	00000	0E
02	MR	10msec	0000	00000	0E

04	MR	10msec	0000	00000	00

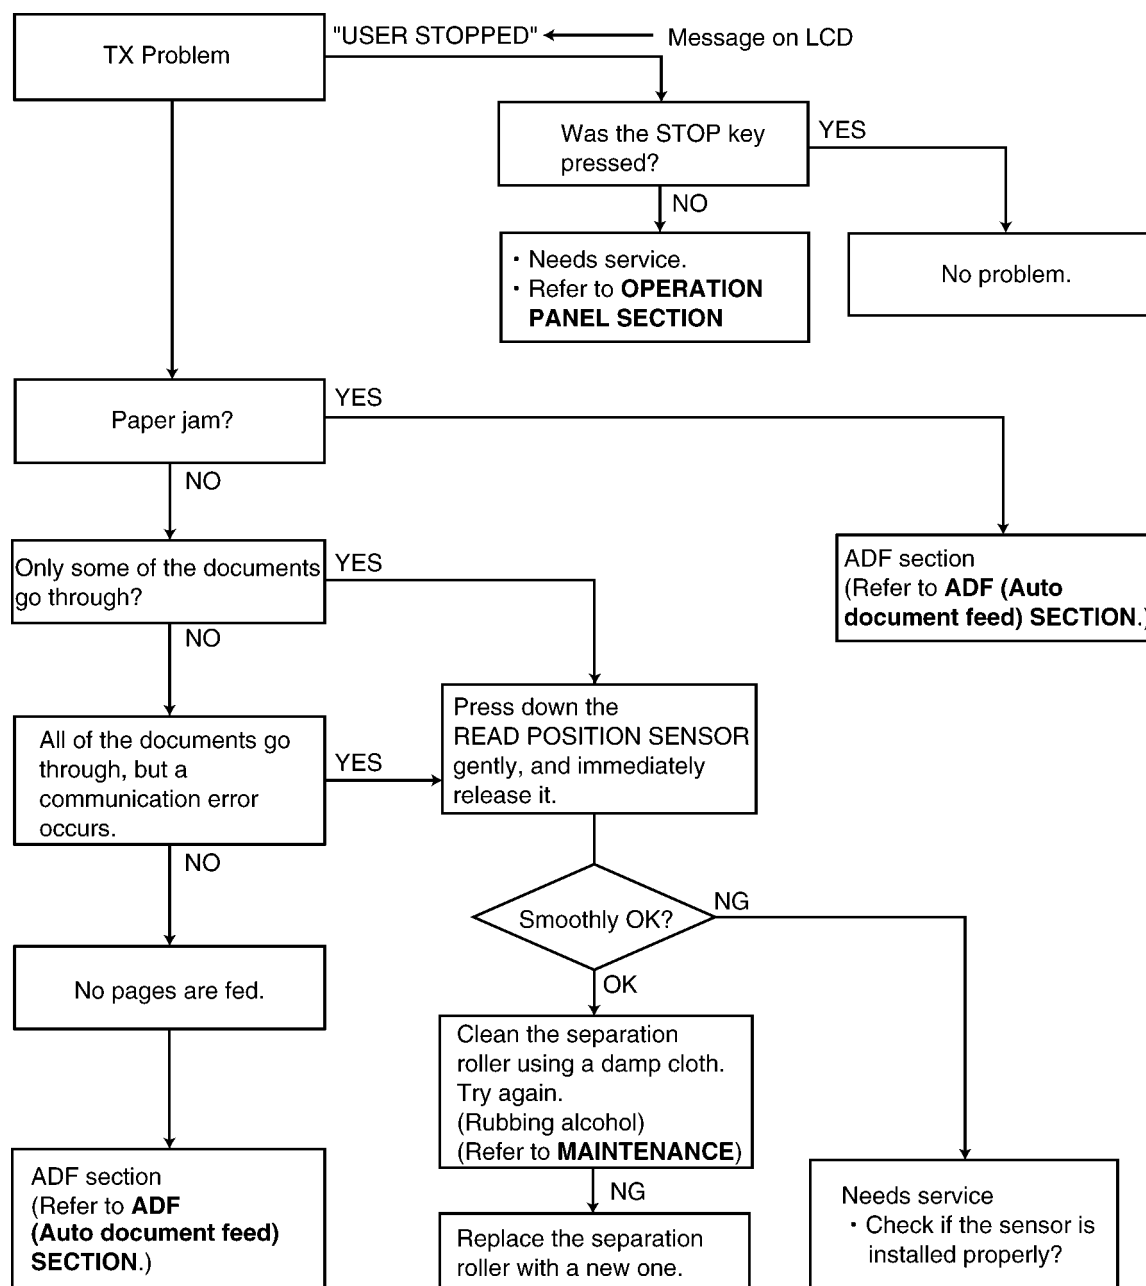

### 12.3.3. Communication Section

Find the problem in the table shown below, and refer to the corresponding troubleshooting procedure in **Defective Facsimile Section** (P.79).

No.	Symptom	Content	Possible cause
1	The paper is not fed properly when faxing. (Nor in the copy mode.)	Troubleshooting	Problem with the feeding mechanism.
2	The fax usually transmits successfully but sometimes fails. (The unit can copy documents.)	Troubleshooting	Problem with the service line or with the receiver's fax.
3	The fax usually receives successfully but sometimes fails. (The unit can copy documents.)	Troubleshooting	Problem with the service line or with the transmitter's fax.
4	The fax completely fails to transmit or receive. (The unit can copy documents.)	Troubleshooting	Problem with the electric circuit.
5	The fax fails either to transmit or receive when making a long distance or an international call. (The unit can copy documents.)	Detailed description of the possible causes (Similar to troubleshooting items No.2 and No.3.)	Problem with the service line.
6	The fax image is poor when transmitting or receiving during a long distance or an international call.		
7	No.1-No.5	The troubleshooting procedure for each error code will be printed on the communication result report.	

### 12.3.3.1. Defective Facsimile Section

#### 12.3.3.1.1. Transmit Problem

#### CROSS REFERENCE:

Operation Panel Section(P.112)

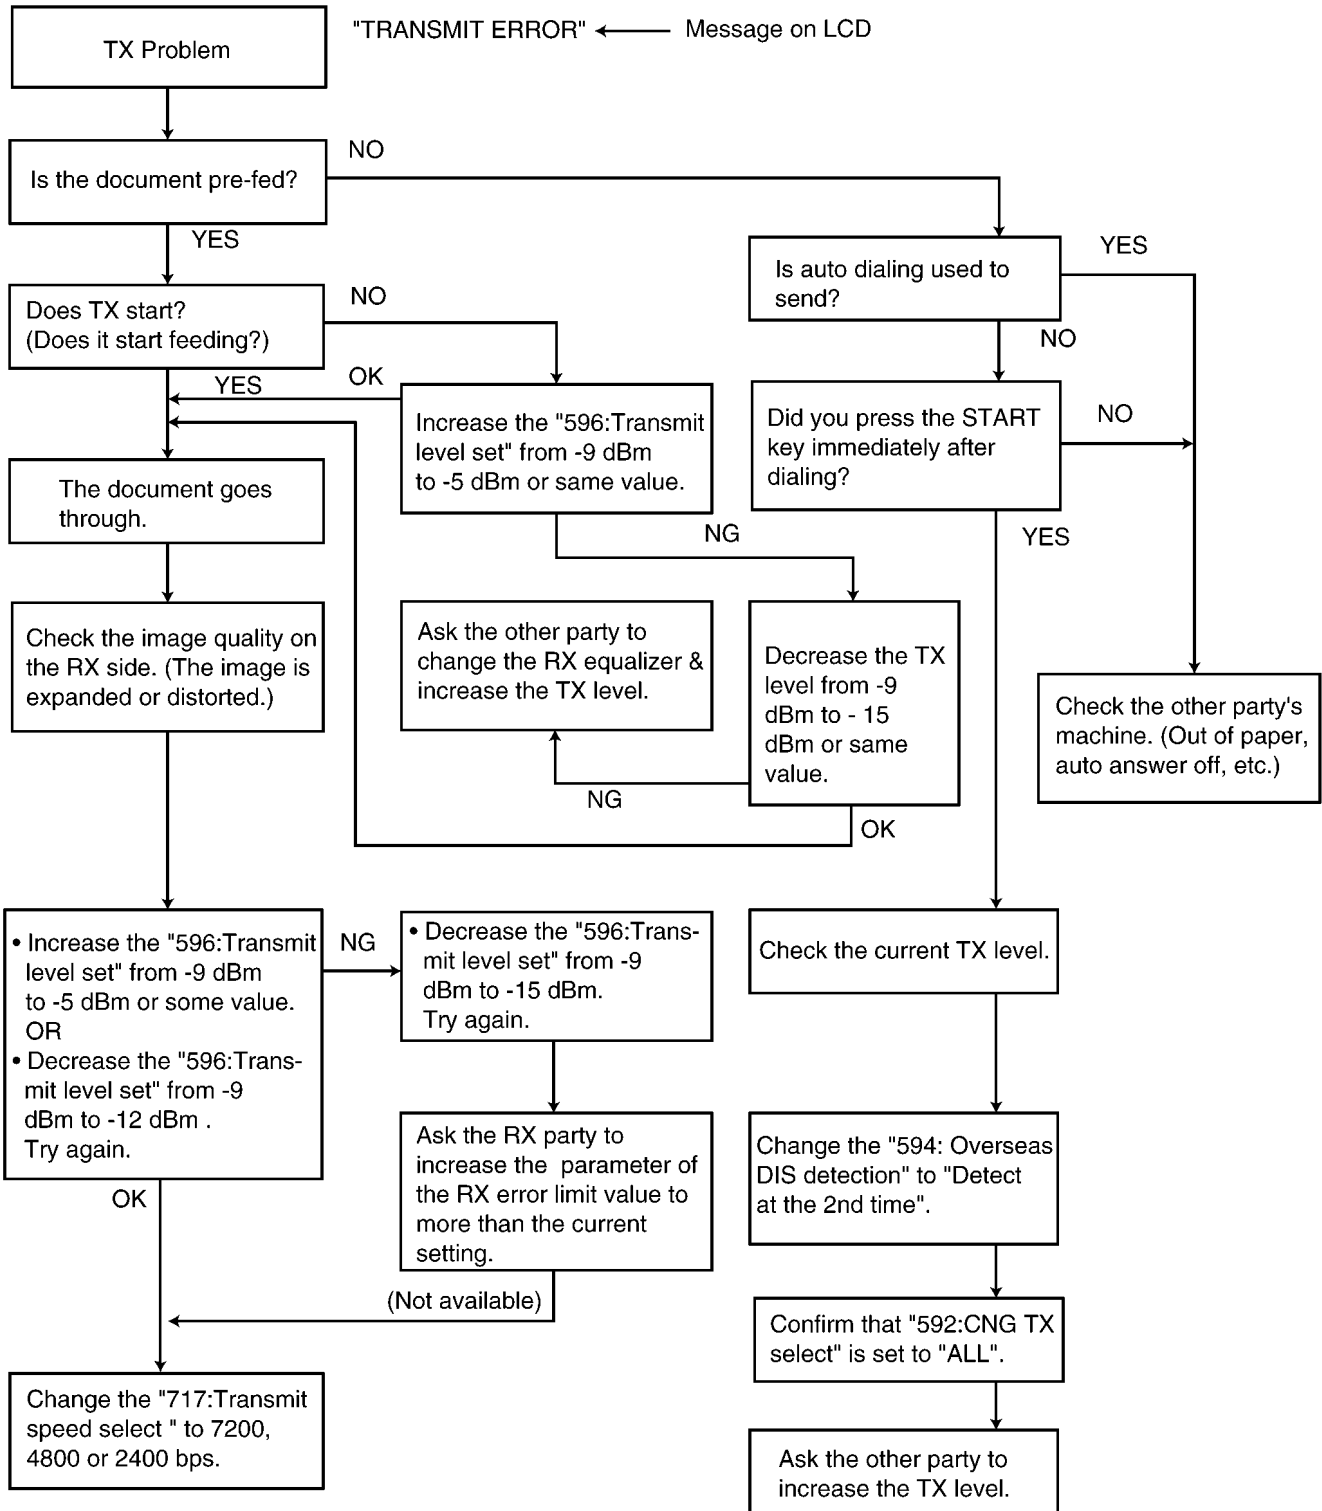

ADF (Auto Document Feed) Section(P.92)

Maintenance(P.128)

### 12.3.3.1.2. Sometime there is a transmit problem

**Note:**

Refer to **Error Message (Display)** (P.10) for display message.

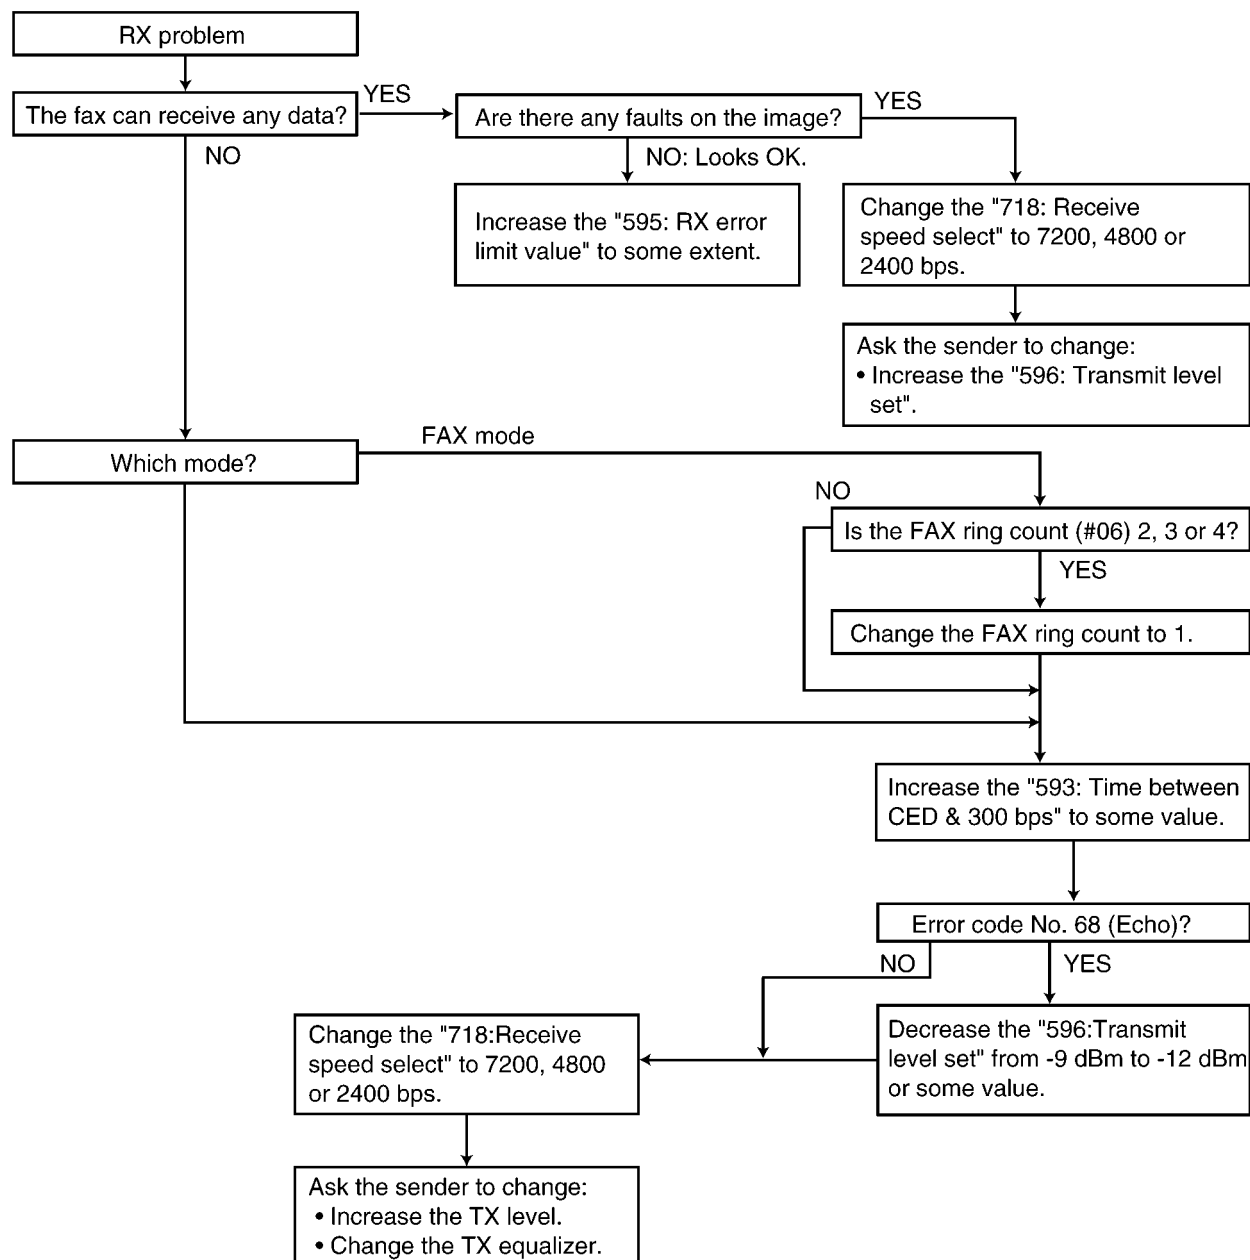

**Note:**

- "596: Transmit level set" represents a service code. (Refer to **Service Function Table**(P.57).)

### 12.3.3.1.3. Receive Problem

First confirm whether the recording paper is installed properly or not before starting troubleshooting. (Refer to “Remarks”.)

**Note:**

“596: Transmit level set” represents a service code. (Refer to **Service Function Table** (P.57).)

**Remarks:**

Regarding the reception problem, we have investigated the conceivable causes in the flow chart except for the software-related errors. However, some troubles may occur due to the software-related problems such as “OUT OF PAPER” when the fax switches to the memory receiving mode and the memory capacity becomes full of the unprintable data. In this case, error messages [MEMORY FULL] and its main cause, for example “CHECK PAPER” are displayed on the LCD. Once you solve the main problem, [MEMORY FULL] will be cancelled and the reception problem will be resolved.

LCD display messages indicating the error causes are shown below.

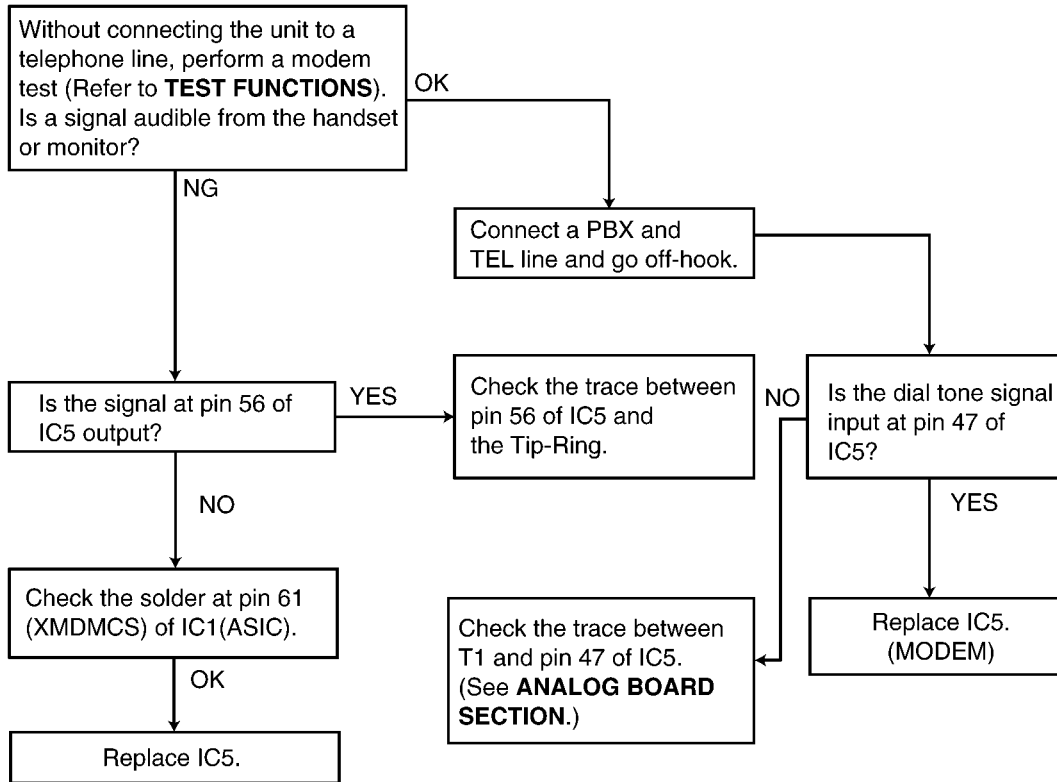

COVER OPEN

UNIT OVERHEATED (COVER OPEN, etc.)...Reset the unit.

PAPER JAMMED

Please refer to **Error Messages-Display** (P.64) for the above items. If it turns out to be a hardware deformity, please check each sensor. (Refer to **Test Mode** (P.54).)

### 12.3.3.1.4. The unit can copy, but cannot transmit/receive

#### CROSS REFERENCE:

Analog Board Section(P.107)

Test Mode(P.54)

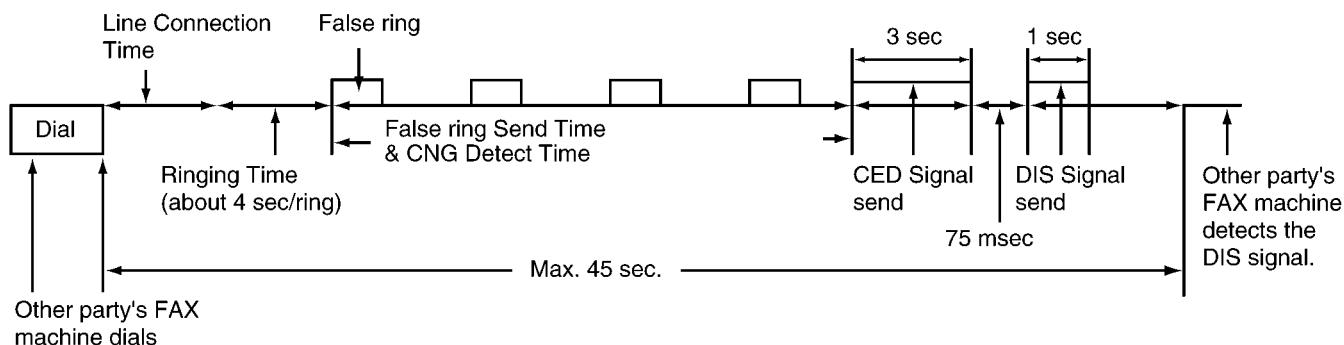

### 12.3.3.1.5. The unit can copy, but cannot either transmit/receive long distance or international communications

The following two causes can be considered for this symptom.

#### Cause 1:

The other party is executing automatic dialing, the call has been received by this unit, and the CED or DIS signal response time is too long. (In most cases, this unit detects the CNG signal and can respond to CED or DIS.) (According to the ITU-T standard, the communication procedure is cancelled when there is no response from the other party within 35 sec, so that the other party releases the line.)

(Response Time)

#### (Cause and Countermeasure)

As shown in the chart above, the total handshaking time must be reduced, but because of the long distance connection and linking of several stations, the line connection time cannot be reduced. Accordingly, the following countermeasures should be tried. (A)... As the 45 sec. count is started directly after dialing or directly after the START button has been pressed for models with a START button, the other party should be called manually, if possible. Another possibility is entering two pauses at the end of the auto dial number on the transmission side. Then the count start time can be delayed for 2 pauses (about 10 sec.).

#### Cause 2:

Erroneous detection because of an echo or an echo canceler.

#### (Echo/Echo Canceler)

The signal from FAX1 reaches FAX2 via stations 1 and 2, but the reflection signal at station 2 also returns via station 1 (echo). As the distance between station 1 and station 2 is far, the echo returns to FAX 1 at a max of 600 msec after transmission. There is a possibility that this signal is detected erroneously as the signal from FAX2. For a normal call, there is also a possibility that the echo of their own voice will make the call difficult to understand. For this reason, each station (station 1 and station 2) attaches echo cancelers (S1 and S2) for international lines or long distance lines. For the echo canceler, the level of the transmission signal from FAX 1 is compared with the level of the reception signal from FAX2. When the transmission signal is larger, S1 is closed while S2 is opened when it is smaller. In other words, for transmission from FAX1, S1 is closed and S2 is open, so that the echo does not return to FAX1.

## (Causes and Countermeasures)

No.	Countermeasure Side	Echo Communication Problem Example	Countermeasure	Service Code
1	Sending side	Some time is needed to compare the level of the receiving and sending signals for the echo canceler. The header of the training signal lacks due to a switching delay to close S1.	Add a dummy signal to the beginning of the training signal.	Service code (521) (International mode select) This countermeasure becomes the default value.
2	Receiving side	The echo canceler function stops according to a CED signal frequency of 2100Hz (S1 and S2 are both ON), a DIS signal is returned as an echo, and a DCS signal from the sending side overlaps the DIS echo. Then the receiving side FAX cannot retrieve the DCS signal. (Refer to Fig. a)	Change to a 1100Hz CED signal frequency. (Refer to Fig. b)	Service code (520) (CED frequency select)
	Receiving side		Change the regular rime of 75 msec between the CED signal and DIS signal to 500 msec. This will give at least 250 msec to recover the echo canceler operation. (Refer to Fig. c)	Service code (593) (Time between CED and 300 bps)
	Sending side		The sending side FAX sends a DCS signal not after receiving the 1st DIS signal but after receiving the 2nd DIS signal. (Refer to Fig. d)	Service code (594) (Overseas DIS detection select)
3	Sending side	Communication failure occurs in a long distance communication on the telephone line without an echo canceler.	Decrease the transmission level from -9 dBm to -15 dBm and the echo level will decrease.	Service code (596) (Transmit level set)
4	Sending side Receiving side	or	Decrease the receiving sensitivity from -13 dBm to about -32 dBm so an echo signal will not received.	Service code (598) (Receiving sensitivity)
5	Sending side Receiving side	There are some cases (e.g. Mobil comms.) which cause the collision of TX / RX signals due to the delay / echo and noise of the network / terminal. (Refer to Fig. e)	Set additional Pause time (Service mode: code No. 774) in between the original and its repeated signals, to prevent the collision of the signals at both end.	Service code (774) (T4 timer)

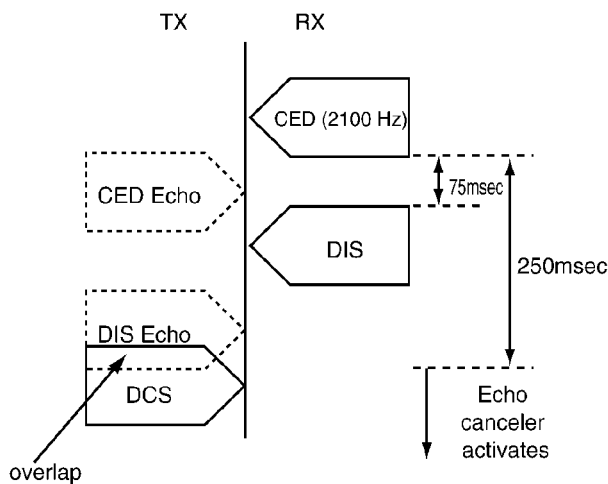

Fig. a (Overlapping the Echo of the DIS signal and DCS signal)

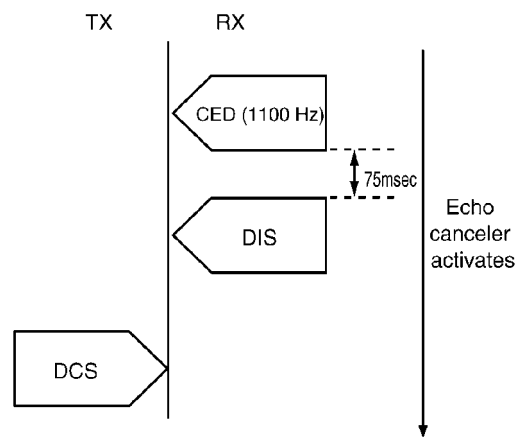

Fig. b (Countermeasure by Changing the CED Frequency)

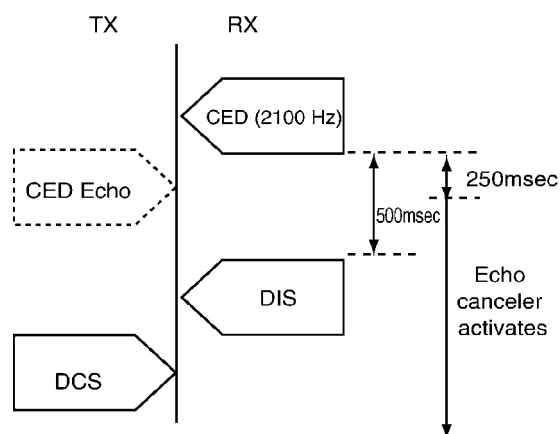

Fig. c (Countermeasure by Changing the Interval Between CED and DIS)

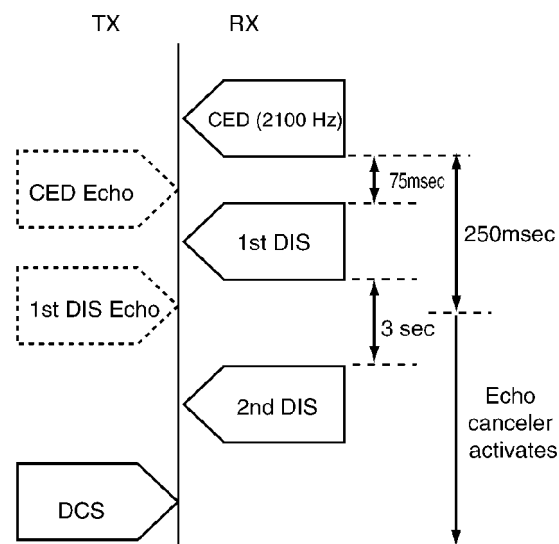

Fig. d (Countermeasure by Ignoring the 1st DIS)

<TX side signal>	<RX side signal>	<Countermeasure>
2nd / 3rd DCS / Training	& delayed CFR / FTT	at TX side
2nd / 3rd EOP / EOM / MPS	& delayed MCF / PIP / PIN / RTP / RTN	at TX side
delayed DCS	& 2nd / 3rd / --- DIS	at RX side

(Fig. e)

### 12.3.3.1.6. The unit can copy, but the transmission and reception image are incorrect

(Long distance or international communication operation)

This symptom highly depends on the transmission and reception capability of the other FAX unit and the line conditions. The countermeasures for this unit are shown below.

#### Transmission Operation:

Set the transmitting speed to 4800BPS (service mode: code No. 717) or select the overseas mode.

#### Reception Operation:

If 80% or more of the reception is incorrect, set the receiving speed to 4800BPS. (Service mode: code No. 718)

- Refer to **Service Function Table**(P.57).

### 12.3.3.1.7. How to record fax signal by using PC

Recording FAX signal is one of the useful analysis measures to solve communication problems.

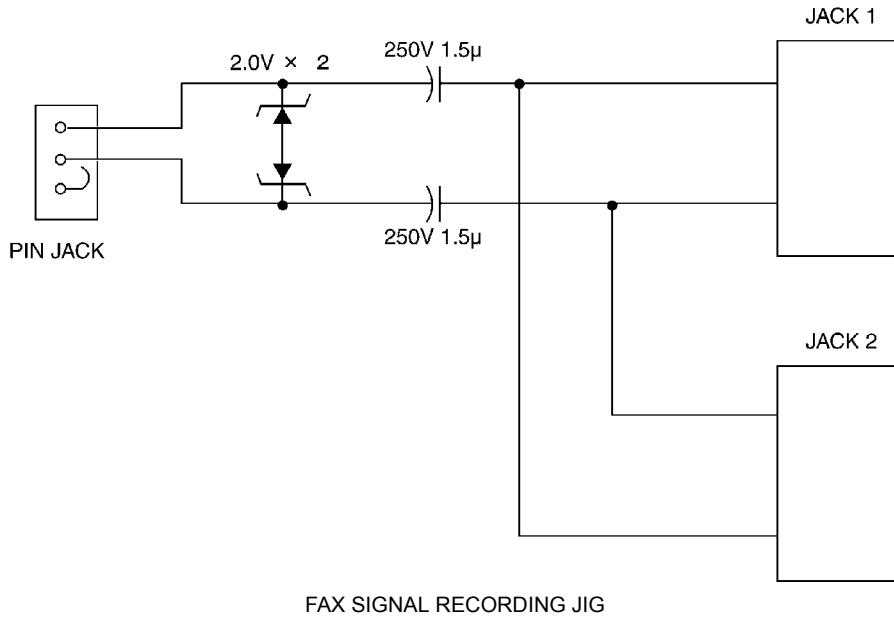

The way of recording easily by using PC is shown as follows.

#### 1. Equipment

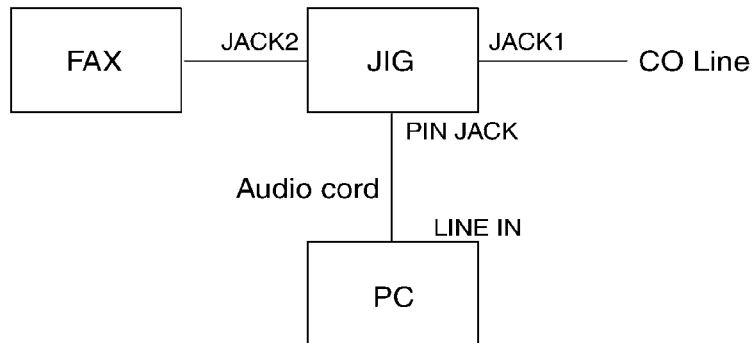

- 1 jig
- 1 PC (with LINE IN)
- 1 audio cord (mini jack supported)
- 2 tel cords

Parts No.	Parts Name & Description	Qt'y
PQJJ1T004Z	JACK1, JACK2	2
PQJJ1D010Z	PIN JACK	1
ECQE2155KF or ECQE2E155KC	CAPACITOR	2
MA4020	DIODE	2

#### 2. Setting up

#### 3. Connecting PC and JIG

#### 4. PC setting and recording

1. Set LINE IN to be valid in the volume control setting.  
Refer to the PC instruction book.
2. Start up the PC software "SOUND RECORDER". (This software is bundled to Windows OS, which can create WAV file.)  
Set the audio format "PCM 22.050kHz, 8bit, mono".
3. Click the record button and start recording after acquisition the signal.

#### Note:

- Not to be wind wave patterns on the wave monitor.
- Please compress the recording data when you send attaching to E-Mail because the data size will be so heavy.
- Any software which can create WAV files is available.

## 12.4. Remote Programming

If, after the call is connected, the customer describes the situation and it is determined that the problem can be corrected by making parameter changes, this function makes it possible to change parameters such as the user code and service code from another fax (using DTMF tones). Therefore, travel to the customer's location is not required. However, it is not possible to change all the parameters remotely (**Program Mode Table** (P.88)). The function used to accomplish this is remote programming.

First, in order to check the current status of the service code parameter, print out the setup list (code: 991) and the service list (code: 999) from the customer's fax machine.

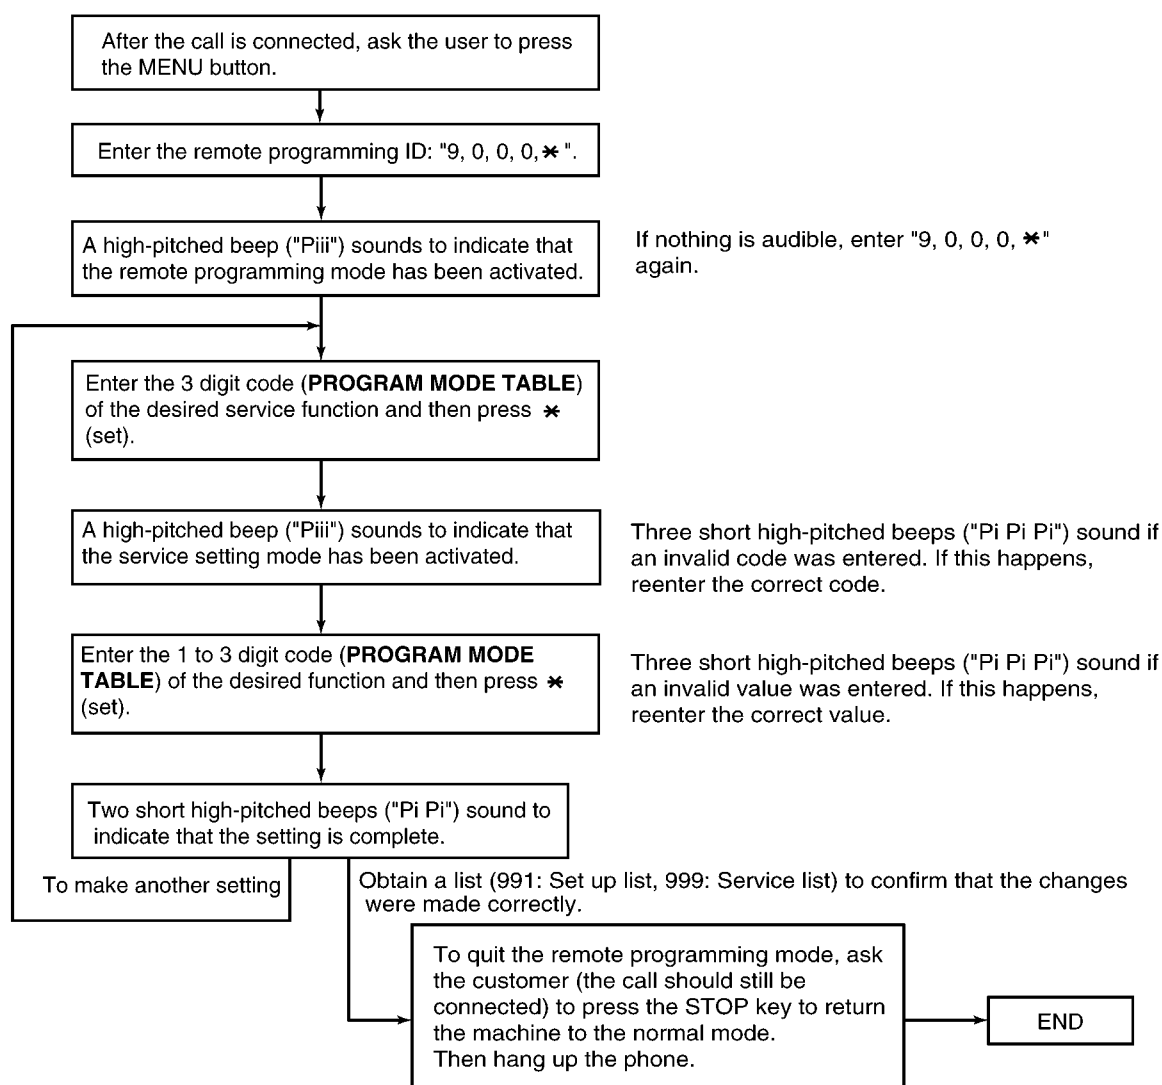

Based on this, the parameters for the desired codes can be changed.

The procedure for changing and listing parameters is described on **Entering the Remote Programming Mode and Changing Service Codes** (P.87). Also, before exiting the remote programming mode, it is advisable to obtain a new list to confirm that the changes were made correctly.

### Hint:

Since the connected telephone is in use during the remote programming mode, it may be helpful to ask the customer to switch to the speakerphone. This frees the customer from the need to remain right next to the fax while you are making parameter settings. When finished, inform the customer. Also note that in very noisy locations where the DTMF tones are not audible, the remote programming function will not work.

### 12.4.1. Entering the Remote Programming Mode and Changing Service Codes

**CROSS REFERENCE:**  
**Program Mode Table** (P.88)

## 12.4.2. Program Mode Table

Code	Function	Set Value	Default	Remote Setting

996	Journal 3 list	1:Start	-----	OK
998	History list	1:Start	-----	OK
999	Service list	1:Start	-----	OK

OK means "can set".

NG means "can not set".

**Note:**

Refer to **Service Function Table** (P.57) for descriptions of the individual codes.

**Example:**

If you want to set value in the "004 Transmission report mode", press the dial key number 1, 2 or 3 corresponding to the Set Value you want to select. (1:ON/2:OFF/3:ERROR)

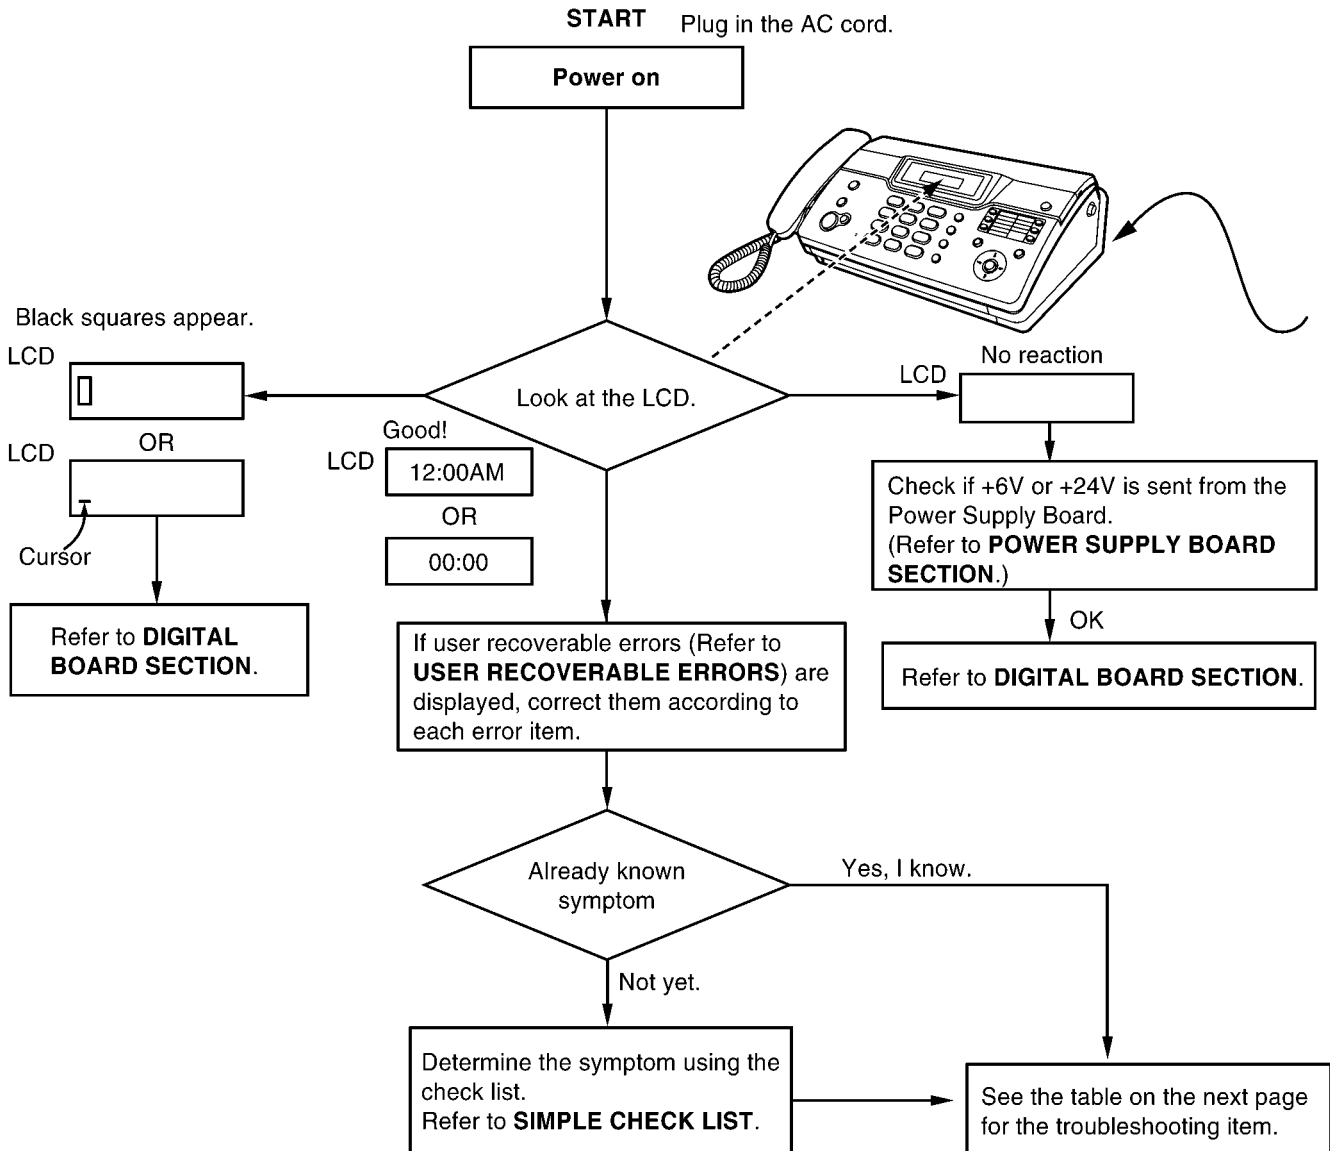

## 12.5. Troubleshooting Details

### 12.5.1. Outline

Troubleshooting is for recovering quality and reliability by determining the broken component and replacing, adjusting or cleaning it as required. First, determine the problem then decide the troubleshooting method. If you have difficulty finding the broken part, determine which board is broken. (For example: the Digital PCB, Analog PCB, etc.) The claim tag from a customer or dealer may use different expressions for the same problem, as they are not a technician or engineer. Using your experience, test the problem area corresponding to the claim. Also, returns from a customer or dealer often have a claim tag. For these cases as well, you need to determine the problem. Test the unit using the simple check list on **Simple Check List**(P.91). Difficult problems may be hard to determine, so repeated testing is necessary.

### 12.5.2. Starting Troubleshooting

Determine the symptom and the troubleshooting method.

## 12.5.5. Digital Board Section

When the unit fails to boot up the system, take the troubleshooting procedures very carefully. It may have a serious problem.

The symptom: No response when the power is turned on. (No LCD display, and keys are not accepted.)

The first step is to check the power source. If there is no problem with the power supply unit, the problem may lie in the digital unit (main board).

As there are many potential causes in this case (ASIC, DRAM, etc.), it may be difficult to specify what you should check first. If a mistake is made in the order of checks, a normal part may be determined faulty, wasting both time and money.

Although the tendency is to regard the problem as a serious one (IC malfunction, etc.), usually most cases are caused by solder faults (poor contact due to a tunnel in the solder, signal short circuit due to solder waste).

### Note:

1. Electrical continuity may have existed at the factory check, but a faulty contact occurred as a result of vibration, etc., during transport.
2. Solder waste remaining on the board may get caught under the IC during transport, causing a short circuit.

Before we begin mass production, several hundred trial units are produced at the plant, various tests are applied and any malfunctions are analyzed. (In past experiences, digital IC (especially DRAM and FLASH ROM) malfunctions are extremely rare after installation in the product.)

This may be repaired by replacing the IC, (DRAM etc.). However, the real cause may not have been an IC malfunction but a soldering fault instead.

Soldering faults difficult to detect with the naked eye are common, particularly for ASIC and RA (Resistor Array). But if you have an oscilloscope, you can easily determine the problem site or IC malfunction by checking the main signal lines.

Even if you don't have such a measuring instrument, by checking each main signal line and resoldering it, in many cases the problem will be resolved.

An explanation of the main signals (for booting up the unit) is presented below.

**Don't replace ICs or stop repairing until checking the signal lines.**

**An IC malfunction rarely occurs. (By understanding the necessary signals for booting up the unit, the "Not Boot up" display is not a serious problem.)**

### What are the main signals for booting up the unit?

Please refer to **Digital Board Section (P.99)**.

The ASIC (IC1) controls all the other digital ICs. When the power is turned on, the ASIC retrieves the operation code stored in the FLASH ROM (IC2), then follows the instructions for controlling each IC. All ICs have some inner registers that are assigned to a certain address.

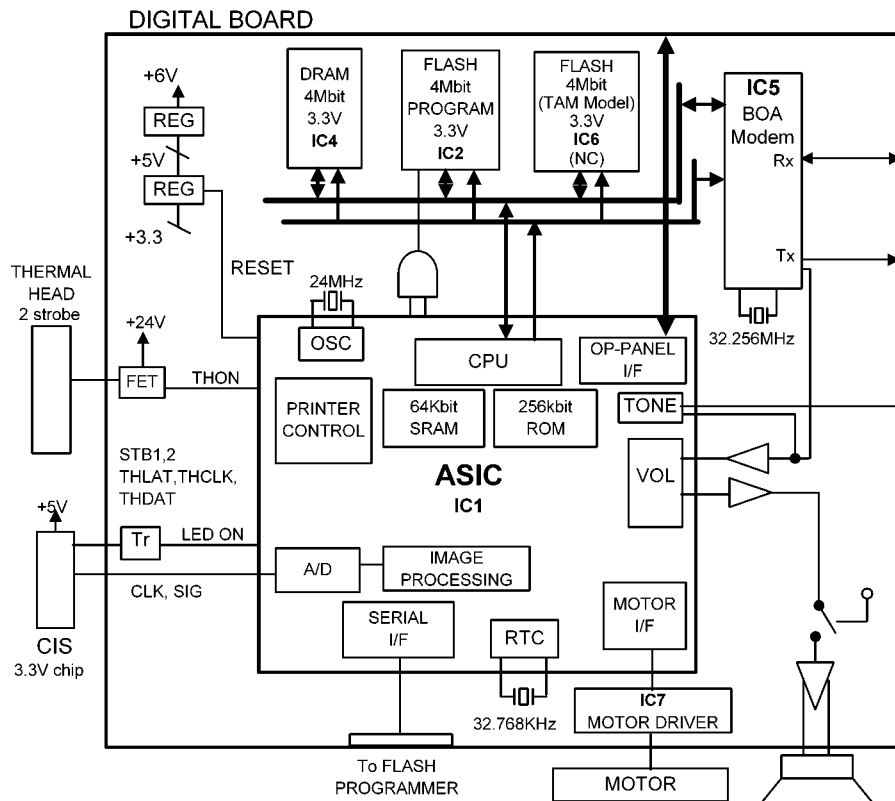

It is the address bus by which the ASIC designates the location inside each IC. And the data bus reads or writes the data in order to transmit the instructions from the ASIC to the ICs.

These signal lines are all controlled by voltages of 3.3V (H) or 0V (L).

### 12.5.5.1. Digital Block Diagram

Digital board is including analog system. All analog signals (Telephone, CID and TAM) excepting Fax communications. Another one is ASIC system for mechanical functions: Copy, Fax and UI (LCD/Key). And serial interface (UART) connects both systems.

Flash memory IC2 in the ASIC system is for software and also for user memory (settings, Phone book, CID memory) DRAM IC4 in the ASIC system is for work memory and also for fax memory.

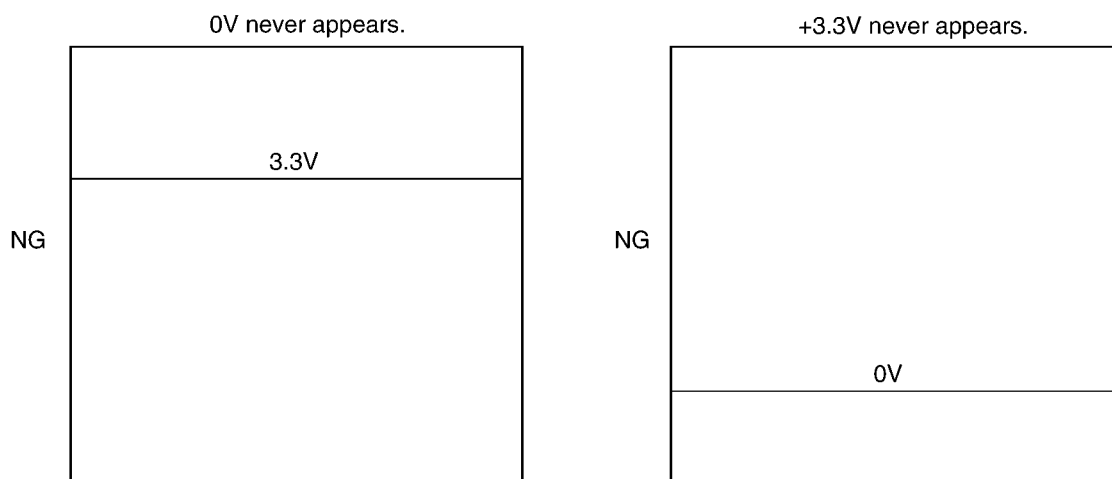

The signal lines that must be normal for the system to boot up are listed here [List 1].

For signal lines other than these, even if they malfunction they do not directly affect booting up the system.

[List 1]

- |     |                    |                              |
|-----|--------------------|------------------------------|
| (1) | D0~D7              | (Data Bus)                   |
| (2) | A0~A12, RBA0~RBA5  | (Address Bus)                |
| (3) | $\overline{RD}$    | (Read Signal)                |
| (4) | $\overline{ROMCS}$ | (ROM Select Signal)          |
| (5) | $\overline{WR}$    | (Write Signal)               |
| (6) | $\overline{RAS}$   | (DRAM Row Address Select)    |
| (7) | $\overline{CAS}$   | (DRAM Column Address Select) |
| (8) | $\overline{MDMCS}$ | (MODEM Select Signal)        |

If these signals are normal, once the power is turned on, each IC repeatedly outputs 3.3V (H) and 0V (L). The following page shows NG and normal wave patterns.

**NG Wave pattern**

For a short between D0 and D1

**Note:**

Refer to **NG Example** (P.106).

## Normal Wave Patterns

(1) D0~D7  
Tek Stop(2) A0~A12,RBA0~RBA5  
Tek Stop(3)  $\overline{RD}$   
Tek Stop(4)  $\overline{ROMCS}$   
Tek Stop(5)  $\overline{WR}$   
Tek Stop(6)  $\overline{RAS}$   
Tek Stop(7)  $\overline{CAS}$   
Tek Stop(8)  $\overline{MDMCS}$   
Tek Stop

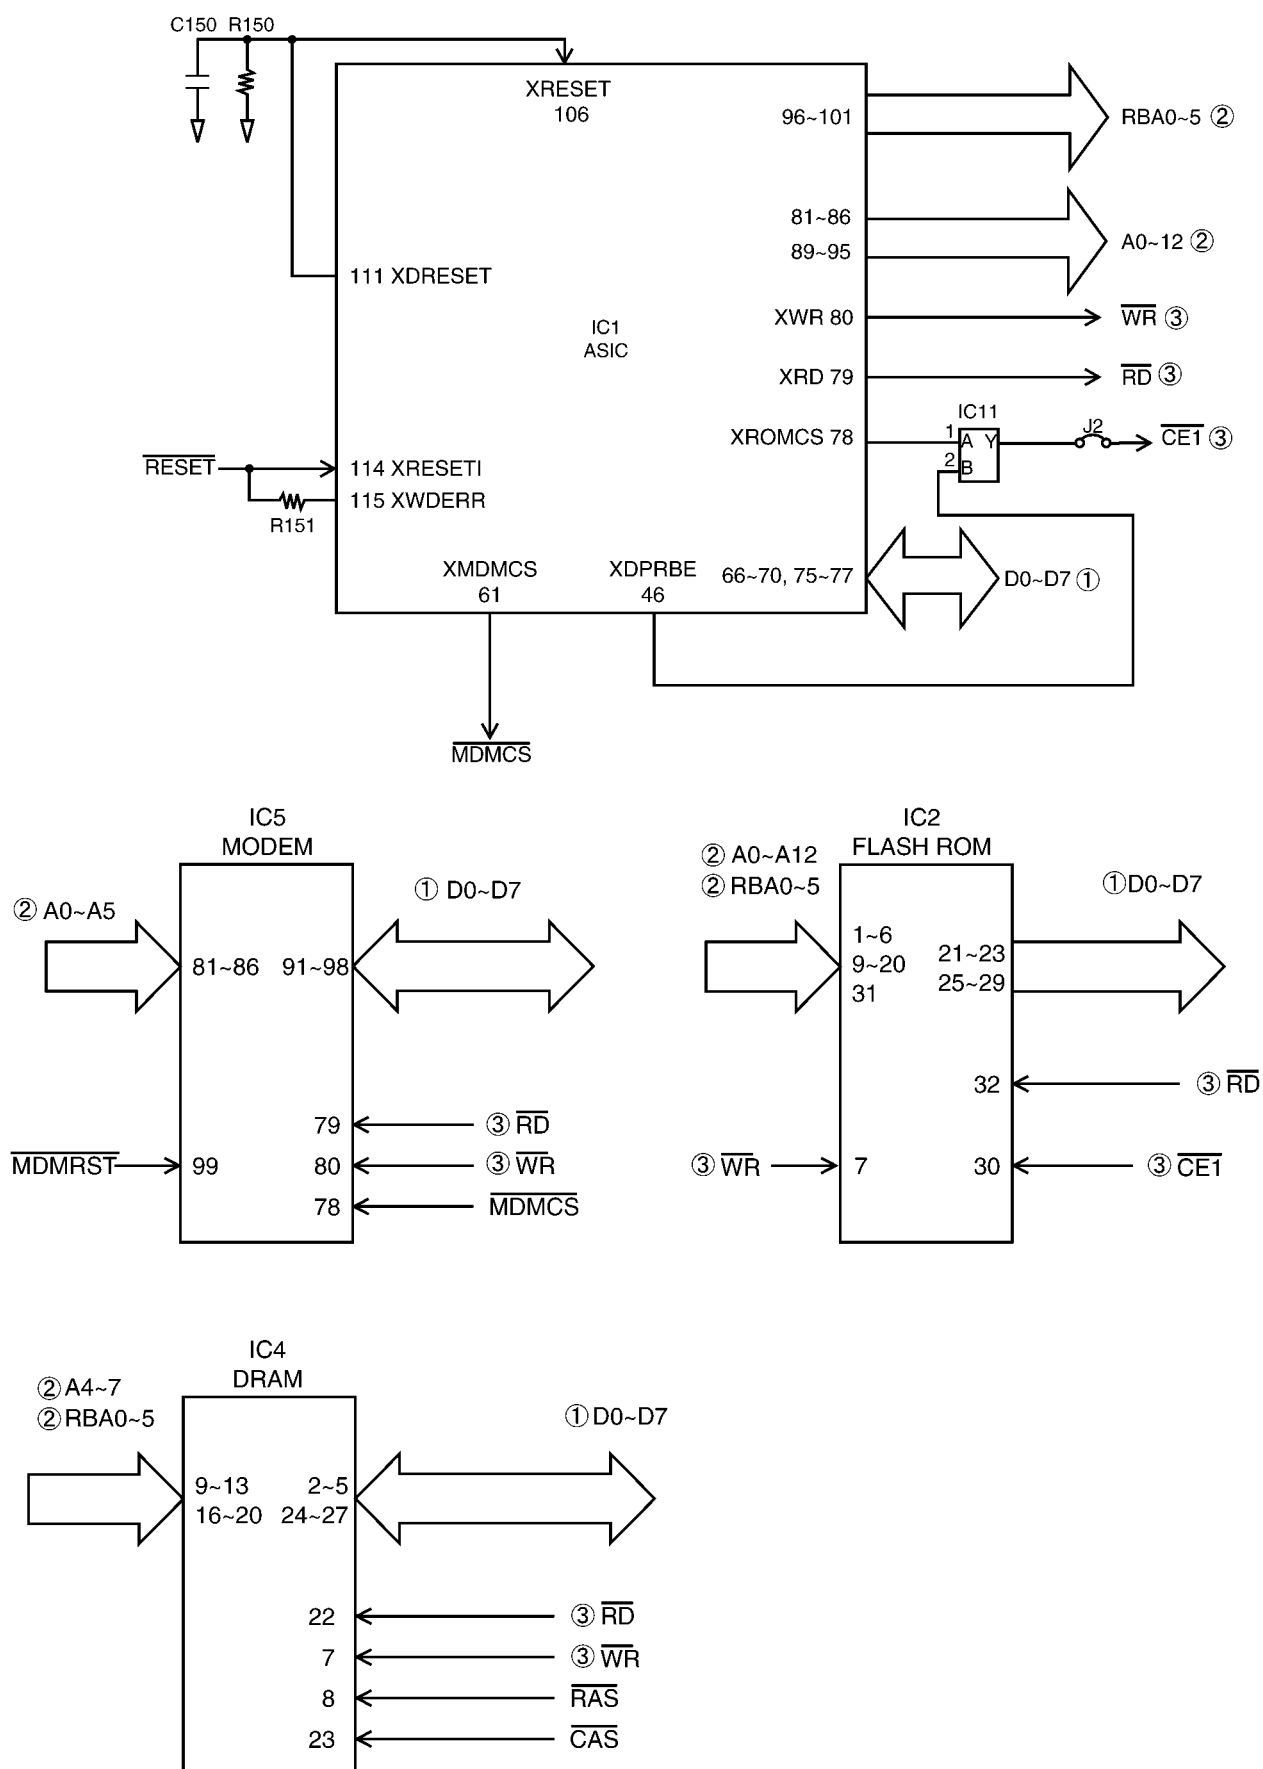

## Remarks:

When you use an oscilloscope to judge whether a signal to be tested is normal or NG, perform the signal check in exactly the same order as in [List 1]. (If the ASIC fails to access the ROM, the ASIC cannot access DRAM normally.)

The digital circuit actually operates according to the timing combinations of these signals. If the timing of these signals is even slightly delayed, the circuit will not work. Nor will it if the IC is defective and the output voltage level is not normal although the timing of these signals is accurate enough to meet the specifications. (Make sure that your oscilloscope is calibrated before starting a test.)

Therefore, it is imperative to confirm whether each IC outputs the signal at the correct level. (See the I/O Pin No. Diagram.) The signal level should be constantly output at between 3.3V (H) and 0V (L) as described earlier.

## I/O and Pin No. Diagram

### 12.5.5.2. Check the Status of the Digital Board

First, please check voltages and oscillation whether they are correct as follows.

#### [1] Voltages check

#### [2] Oscillation

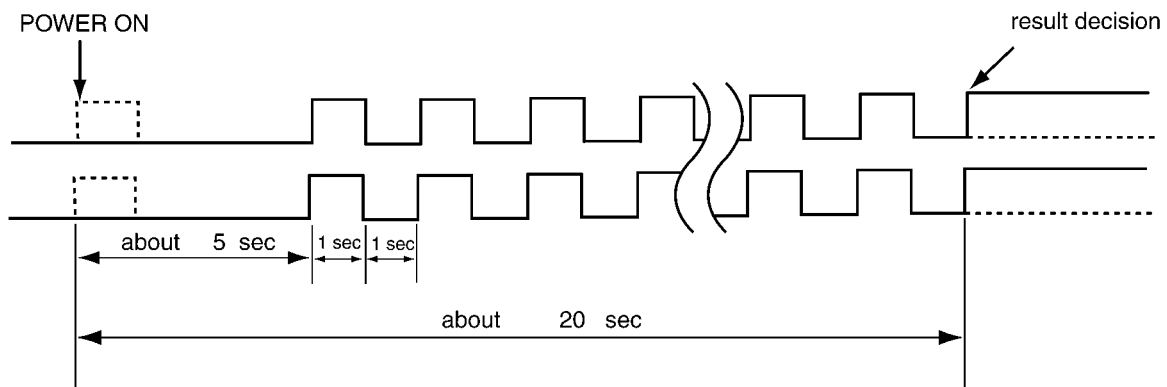

Next, please check voltages of test points A and B.  
The result may tell you a defective point.

#### [3] Status check

Please make a short circuit between the TEST point and DG point using a metallic object, such as tweezers.  
Then, turn on the AC power, and a few seconds later, remove the metallic object.  
Check the following waveform using an oscilloscope or tester.

"A" and "B" signals will be carrying out a toggle after AC POWER ON until a result is decided.  
The cycle of the toggle is 2 seconds (HIGH: 1 sec, LOW: 1sec)

If "A" and "B" signal do not carry out a toggle, CPU may not be operating.

In that case, please check solder faults (poor contact due to a tunnel in the solder, signal short circuit due to solder waste.)

The result of check, if you cannot find solder faults, please replace IC because it may be IC malfunctions.

The order of IC replacement is as follows.

- ① IC1 (ASIC)
- ② IC3 (RESET IC)
- ③ IC4 (DRAM)
- ④ IC2 (FLASH)

- If "A" and "B" signal carry out a toggle, correctly, then "A" and "B" will show the result of the check.
- Check the following voltages using an oscilloscope or tester.
- To cancel the status check mode, turn off the AC power.

Check point voltage		Defective point	Check items
A	B		
3.3V	0	MODEM (IC5)	IC1(61 pin), IC5 (78, 79, 80 ,99 pin), R200, C200, C201, R165
3.3V	3.3V	ALL OK	

- To enable the status check mode, it is necessary that RAM, ROM, and MODEM are controlled from the ASIC correctly.
- If it does not show above mentioned status, please check solder faults again.

Please check the soldering condition of those components.  
If there is no problem, replace the IC5.

If you still have a problem with the digital board, please refer to NG wave pattern.

### 12.5.5.3. NG Example

Short circuit from the adjacent signal wires.  
Check for a short circuit in the RA and IC leads and the signal wire at the through hole.

Short between the signal line and GND.

Solder fault on RA.

## 12.5.6. Analog Board Section

This chapter provides the testing procedures required for the analog parts. A signal route to be tested is determined depending upon purposes. For example, the handset TX route begins at the handset microphone and the signal is output to the telephone line. The signal mainly flowing on this route is analog. You can trace the signal with an oscilloscope. The signal flow on each route is shown in the Check Sheet here. If you find a specific problem in the unit, for example if you cannot communicate with the MONITOR, trace that signal route locally with the following Check Sheet and locate the faulty point.

### 12.5.6.1. Signal Route

(SYMPTOM) ITEMS TO CHECK	IN  signal ROUTE  OUT
MONITOR RX (TEL LINE to SP)	TEL LINE (JACK:CN3) → R41 → T1 → R81 → C17 → R13 → IC2(2-1) → C4 → R5 → CN1(13) → {CN2(13) → R130 → IC10(2-1) → C112 → R131 → IC9(2-1) → C114 → R178 → IC1(32-31) → C125 → R128 → IC9(6-7) → C140 → R140 → IC12(4-8) → CN9(1,2)}
HANDSET TX	HANDSET MIC → CN2(1,4) → (L21 → C40 → R50) / (L24 → C41 → R49) → IC1(5,6-7) → C30 → R32 → L10 → R29 → C25 → R21 → IC2(6-7) → C28 → R27 → R26 → T1 → R41 → (JACK:CN3) TEL LINE
HANDSET RX	TEL LINE (JACK:CN3) → R41 → T1 → R81 → C17 → R13 → IC2(2-1) → C4 → R5 → CN1(13) → {CN2(13) → R130 → IC10(2-1) → C112 → R131 → IC9(2-1) → C114 → R178 → IC1(32-31) → C125 → R128 → IC9(6-7) → IC10(10-11) → C128 → CN2(16)} → CN1(16) → R30 → R34 → L11 → C33 → R46 → Q6 → C45 → R58 → L22 → CN2(2)
FAX TX	{IC5(56) → C225 → R226 → IC10(8-9) → CN2(5)} → CN1(5) → C11 → R16 → IC2(6-7) → C28 → R27 → R26 → T1 → R41 → (JACK:CN3) TEL LINE
FAX RX	TEL LINE (JACK:CN3) → R41 → T1 → R81 → C17 → R13 → IC2(2-1) → C4 → R5 → L1 → CN1(13) → {CN2(13) → C216 → R221 → R220 → C217 → IC5(47)}
DTMF to HANDSET	{IC5(58) → C118 → R124 → IC9(2-1) → C114 → R178 → IC1(32-31) → C125 → R128 → IC9(6-7) → IC10(10-11) → C128 → CN2(16)} → CN1(16) → R30 → R34 → L11 → C33 → R46 → Q6 → C45 → R58 → L22 → CN2(2)
DTMF to SPEAKER	{IC5(58) → C118 → R124 → IC9(2-1) → C114 → R178 → IC1(32-31) → C125 → R128 → IC9(6-7) → C140 → R140 → IC12(4-8) → CN9(1, 2)}
CALLER ID	TELLINE (JACK:CN3) → R41 → T1 → R81 → C17 → R13 → IC2(2-1) → C4 → R5 → R60 → C51 → C50 → R48 → IC1(2-1) → CN1(14) → {CN2(14) → R224 → C221 → R223 → R222 → C222 → IC5(50)}

**Note:**

{ } : Inside the digital board

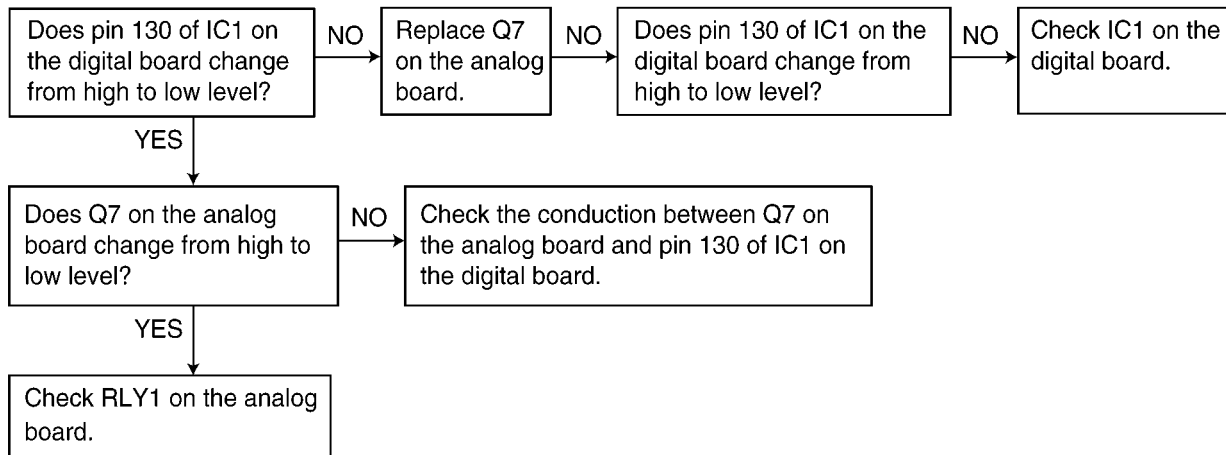

## 12.5.6.2. Defective ITS (Integrated Telephone System) Section

### 1. No handset and monitor transmission / reception

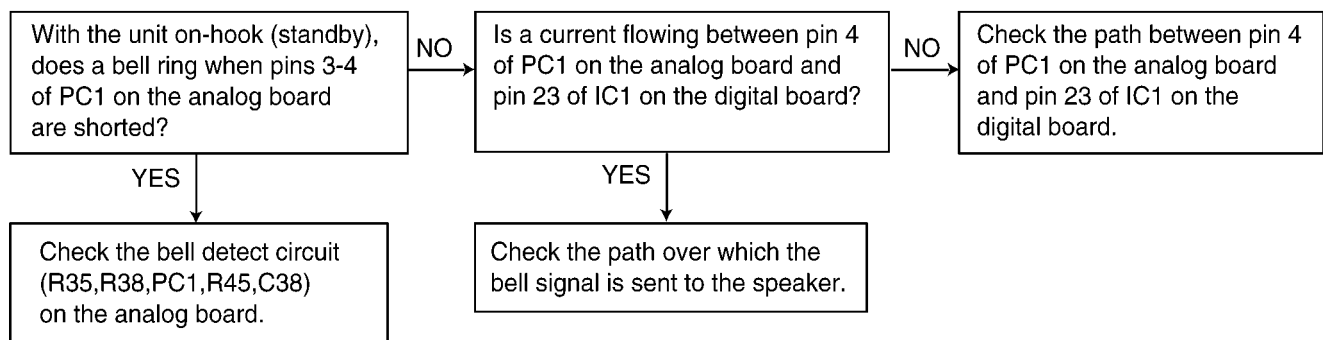

Following the ITS section or NCU section, search for the route between the microphone and the telephone line (sending) or between the telephone line and the speaker (receiving) where the signal disappears.

Check the components at that point.

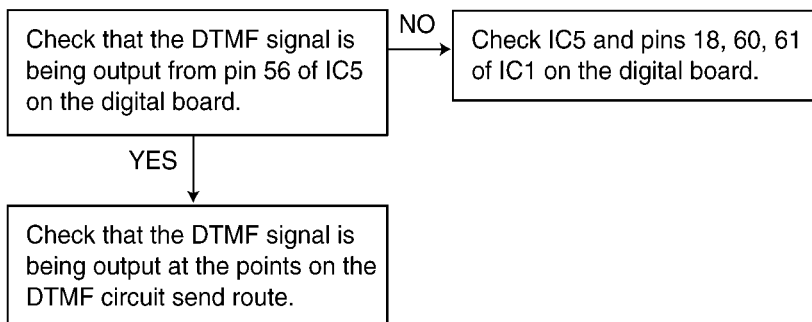

### 2. No pulse dialing

### 3. No ring tone (or No bell)

### 4. No tone dialing

## 12.5.7. Power Supply Board Section

### 12.5.7.1. Key components for troubleshooting

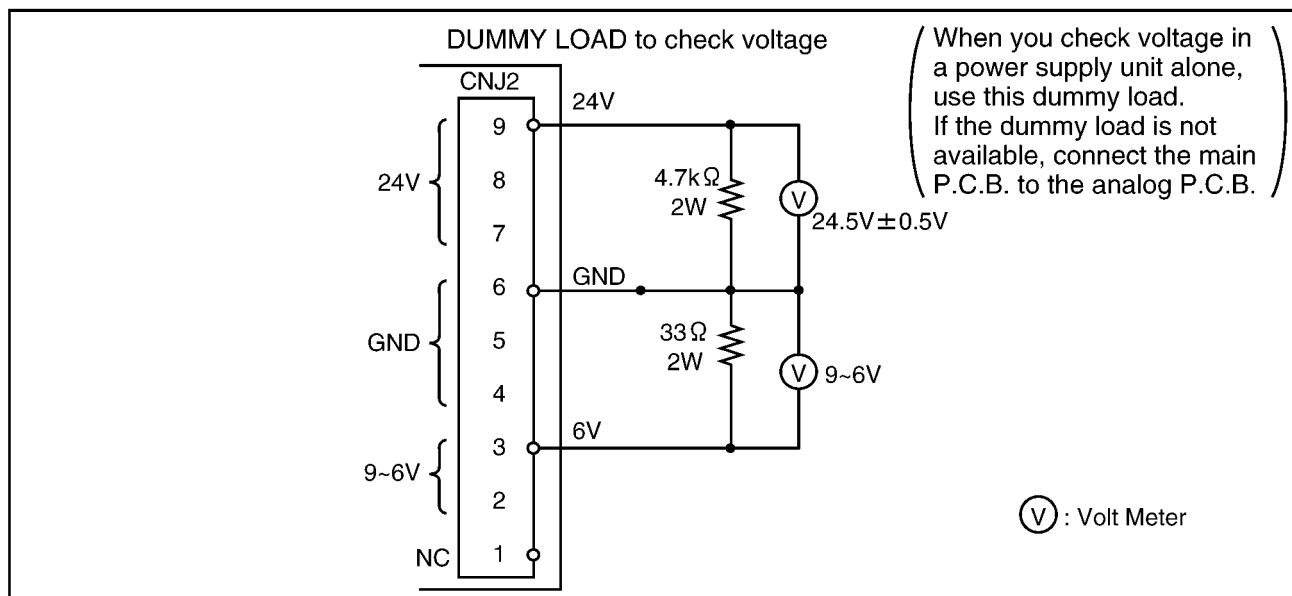

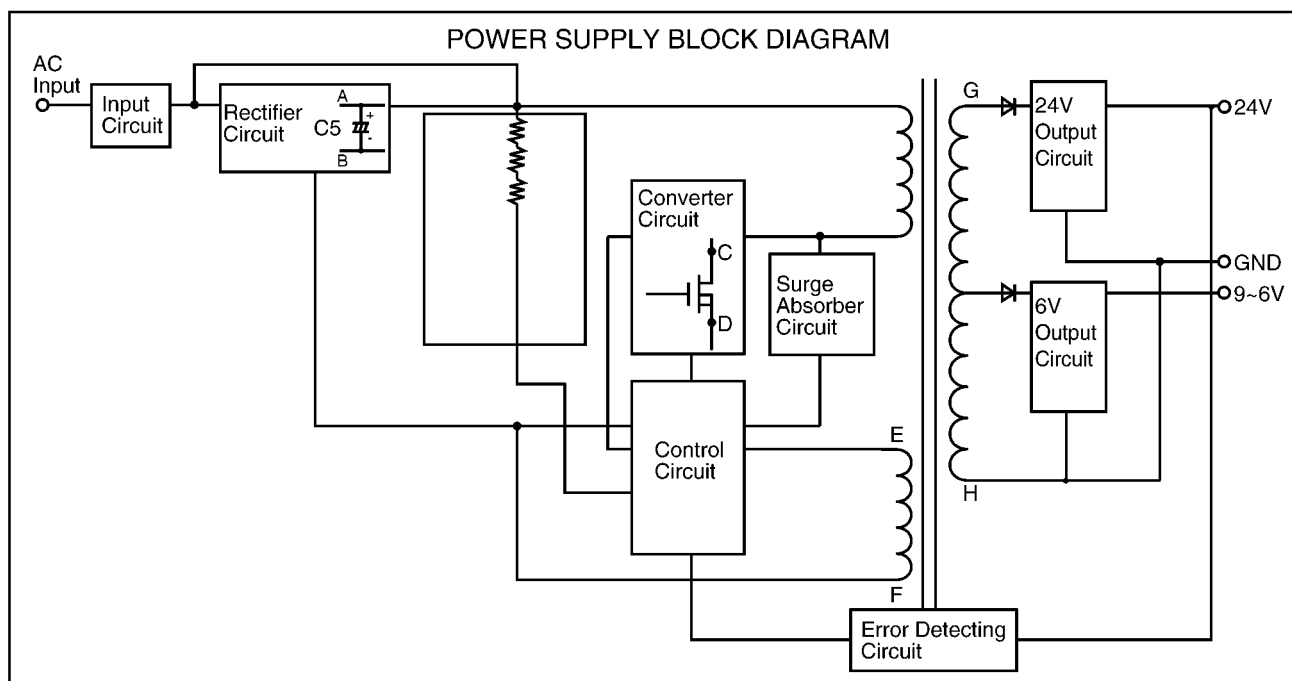

Check the following parts first: F1, D10-D13, C5, and Q1.

This comes from our experience with experimental tests. For example: power supply and lightning surge voltage test, withstanding voltage test, intentional short circuit test, etc.

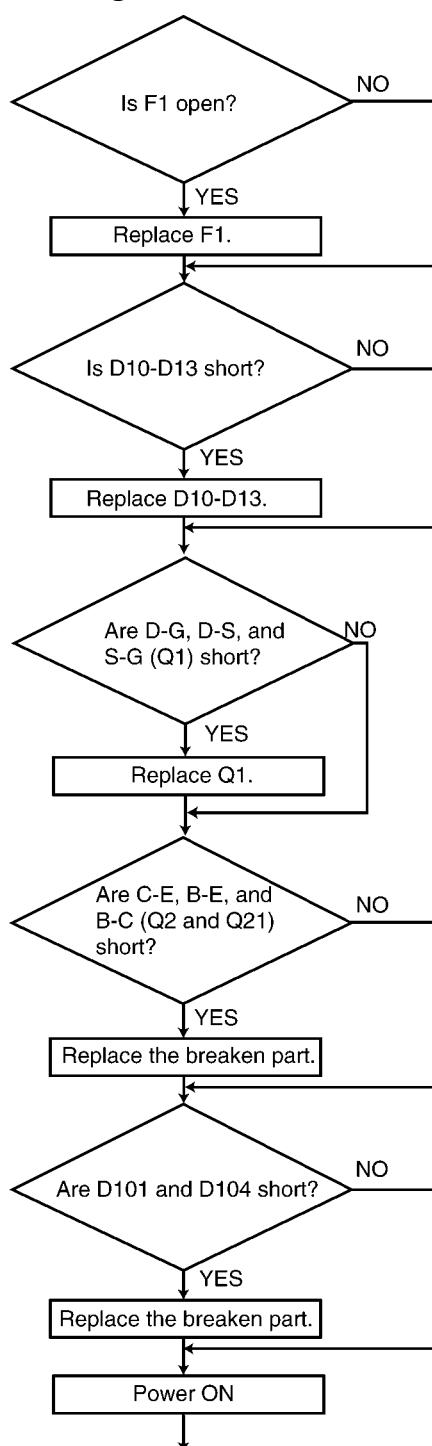

Caution:

If you find a melted fuse in the unit, do not turn on the power until you locate and repair the faulty parts (except for the fuse); otherwise the fuse will melt again and you cannot pinpoint the faulty point.

In most cases, the symptom is that nothing is output. It is more likely that the fault is in the primary side rather than the secondary side. Check the primary side first.

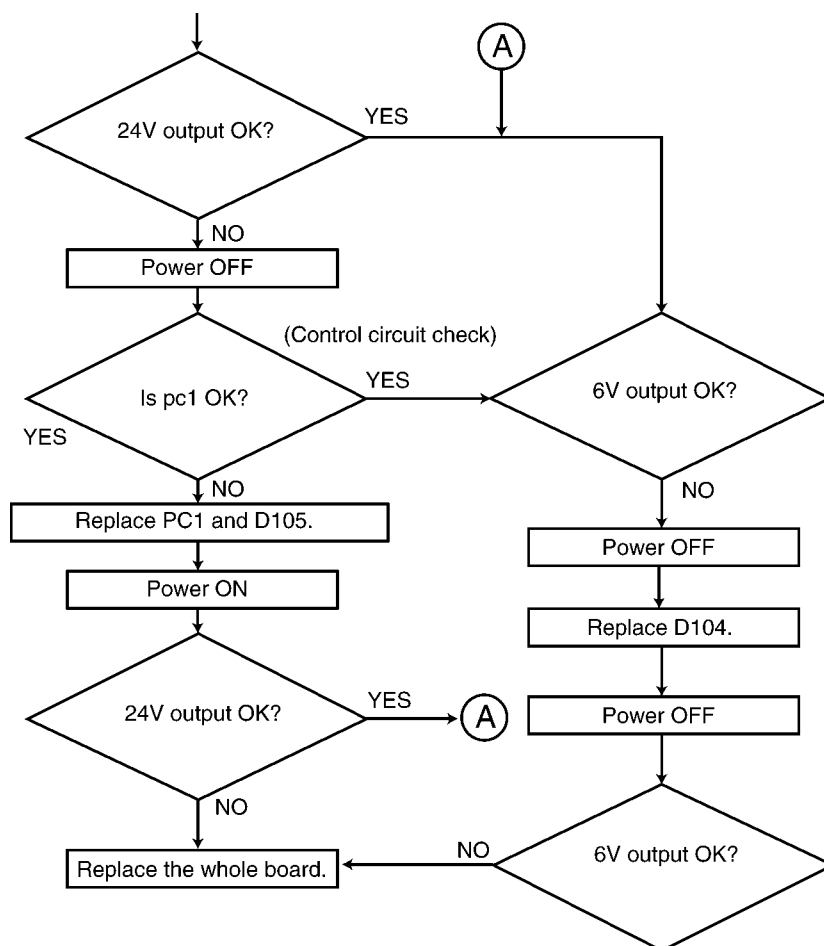

## 12.5.7.2. Troubleshooting Flow Chart

\* When testing for a short circuit, turn off first and then turn on when you start to check output voltage (24V or 6V) as illustrated in the flow chart.

\* An analog tester is recommended to use for checking a short circuit.

### 12.5.7.3. Broken Parts Repair Details

(D10, D11, D12, D13)

Check for a short-circuit in terminal 4. If D10, D11, D12 and D13 are short-circuits, F1 will melt (open). In this case, replace all of the parts (D10, D11, D12, D13, F1).

(Q1)

The worst case of Q1 is a short-circuit between the Drain and Gate because damage expands to the peripheral circuit of Q1. This is due to a very high voltage through the Gate circuit which is composed of R19, Q2, and Q21 etc. You should change all of the parts listed as follows.

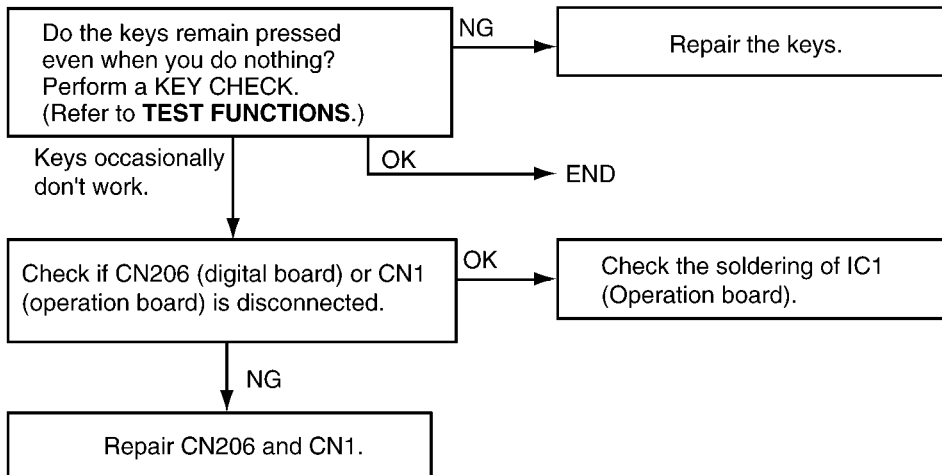

F1, Q1, R19, Q2, Q21

(D101, D104)

If D101 and D104 are broken, the oscillation circuit in the power supply cannot operate. Check it with an electric tester.

## 12.5.8. Operation Panel Section

### 12.5.8.1. No Key Operation

**CROSS REFERENCE:**  
Test Mode(P.54)

**B-4 : How to Remove the Motor of Gear Block (P.126)**

## 14.2. Disassembly Procedure

### 14.2.1. How to Remove the Operation Panel Block

#### PROCEDURE: A-1

#### Ref. No. A-1

- 1) Unhook all the connectors connecting the main cabinet with the OPERATION PANEL BLOCK. (Refer to **Ref. No. B-1**)
- 2) Push the Top cover release button.
- 3) Push the both side arms (in the direction of the arrow shown in Fig. A) simultaneously to release the top of arms.
- 4) Release the both side arms, as shown in a Fig. B.
- 5) Remove the OPERATION PANEL BLOCK.

## 14.2.2. How to Remove the Operation Board, LCD and Platen Roller

PROCEDURE: A-1 → A-2

Ref. No. A-2

- 1) Remove the 4 screws (A)-a.
- 2) Remove the OPERATION PANEL COVER.
- 3) Remove the 2 screws (A)-b.
- 4) Remove the OPERATION BOARD and LCD.

- 1) Remove the Gear, as shown in a Fig. C .
- 2) Remove the Spacer, as shown in a Fig. D.
- 3) Remove the PLATEN ROLLER.

### 14.2.3. How to Remove the Separation Holder and Document Feed Support

PROCEDURE: A-1 → A-2 → A-3

Ref. No. A-3

- 1) Remove the 2 screws (A).
- 2) Release the 3 Hooks-a from rear side.
- 3) Remove the Document Guide Cover.
- 4) Release the Hook-b of Separation Holder, as shown in Fig. E.
- 5) Remove the Separation Holder.
- 6) Remove the Document Feed Support.

## 14.2.4. How to Remove the Image Sensor (CIS) and Feed Roller

PROCEDURE: A-1 → B-1 → A-4

### Ref. No. A-4

- 1) Push the Top cover release button.
- 2) Release the top of Operation Panel Block arms.  
(Refer to Fig. A on **Ref. No. A-2**)
- 3) Remove the 1 screw (E).
- 4) Remove the IMAGE SENSOR, as shown in a Fig. G.
- 5) **Remove the BOTTOM FRAME.** (Refer to **Ref. No. B-1**)
- 6) Remove the FEED ROLLER, as shown in a Fig. H.

## 14.2.5. How to Remove the Lock Lever and Thermal Head

PROCEDURE: B-3 → A-7

Ref. No. A-7

- 1) Remove the **GEAR BLOCK**. (Refer to Ref No. B-3)
- 2) Remove the 1 screw (L).
- 3) Remove the **LOCK LEVER**.
- 4) Remove the **THERMAL HEAD**, as shown in a Fig. K.

## 14.2.6. How to Remove the Bottom Frame

### PROCEDURE: B-1

#### Ref. No. B-1

- 1) Remove the 6 screws (A), 1 screw (B) and 1 screw (F).
- 2) Remove the BOTTOM FRAME.

## 14.2.7. How to Remove the Analog Board, Digital Board, Power Supply Board and Power Cord

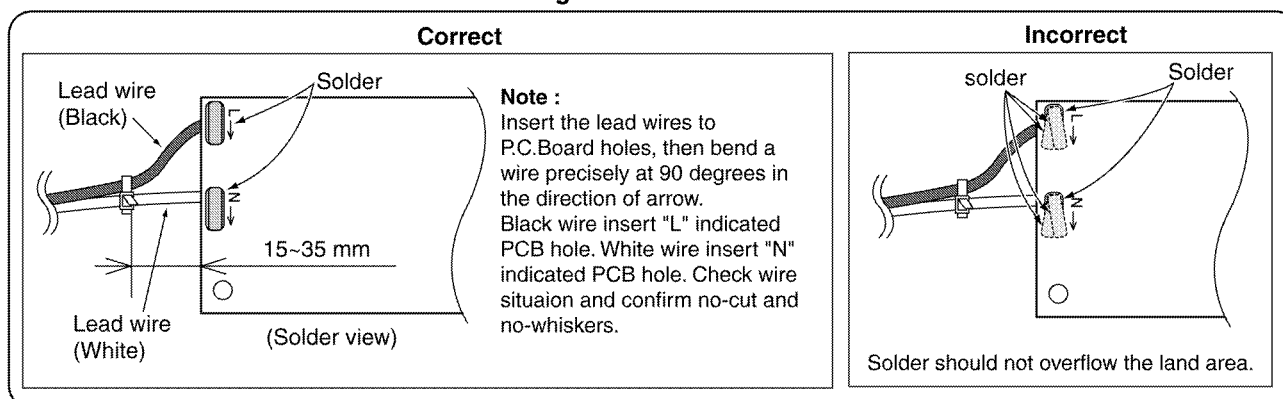

### PROCEDURE: B-1 → B-2

Ref. No. B-2

- 1) Remove the 2 screws (A)-a.
- 2) Remove the ANALOG BOARD.
- 3) Remove the Connectors on the Digital Board.
- 4) Remove the 1 screw (A)-b.
- 5) Remove the DIGITAL BOARD.

- 1) Remove the 1 screw (A)-c and 1 screw (B).
- 2) Remove the 2 screws (G).
- 3) Remove the Connector on the Power Supply Board.
- 4) Remove the POWER SUPPLY BOARD and POWER CORD.

### Soldering the lead wire of Power Cord

## 14.2.8. How to Remove the Gear Block and Separation Roller

PROCEDURE: B-1 → B-3

### Ref. No. B-3

- 1) Remove the 3 screws (A).
- 2) Remove the GEAR BLOCK.
- 3) Remove the SEPARATION ROLLER.

## 14.2.9. How to Remove the Motor of Gear Block

PROCEDURE: B-1 → B-3 → B-4

### Ref. No. B-4

- 1) Remove the 1 screw (J).
- 2) Remove the MOTOR.
- 3) Remove the MOTOR PLATE.
- 4) Remove the SWITCH.

### 14.2.10. Installation Position of the Lead Wires

# 15 Maintenance

## 15.1. Maintenance Items and Component Locations

### 15.1.1. Outline

MAINTENANCE AND REPAIRS ARE PERFORMED USING THE FOLLOWING STEPS.

**1. Periodic maintenance**

Inspect the equipment periodically and if necessary, clean any contaminated parts.

**2. Check for breakdowns**

Look for problems and consider how they arose.

If the equipment can be still used, perform copying, self testing or communication testing.

**3. Check equipment**

Perform copying, self testing and communication testing to determine if the problem originates from the transmitter, receiver or the telephone line.

**4. Determine causes**

Determine the causes of the equipment problem by troubleshooting.

**5. Equipment repairs**

Repair or replace the defective parts and take appropriate measures at this stage to ensure that the problem will not recur.

**6. Confirm normal operation of the equipment**

After completing the repairs, conduct copying, self testing and communication testing to confirm that the equipment operates normally.

**7. Record keeping**

Make a record of the measures taken to rectify the problem for future reference.

### 15.1.2. Maintenance check Items/Component Locations

### 15.1.2.1. Maintenance List

NO.	OPERATION	CHECK	REMARKS
1	Document Path	Remove any foreign matter such as paper.	-----
2	Rollers	If the roller is dirty, clean it with a damp cloth then dry thoroughly.	Refer to <b>How to Remove the Image Sensor (CIS) and Feed Roller</b> (P.122).
3	Platen Roller	If the platen is dirty, clean it with a damp cloth then dry thoroughly. Remove the paper and film cartridge before cleaning.	Refer to <b>How to Remove the Operation Board, LCD and Platen Roller</b> (P.120).
4	Thermal Head	If the thermal head is dirty, clean the printing surface with a cloth moistened with denatured alcohol (alcohol without water), then dry thoroughly.	Refer to <b>How to Remove the Lock Lever and Thermal Head</b> (P.123).
5	Sensors	Document sensor (SW39), Read position sensor (SW38), Recording paper/cover open sensor (SW1), Jam sensor (SW3), Hook switch (SW2) Confirm the operation of the sensors.	See <b>Maintenance check Items/Component Locations</b> (P.128).
6	Glass	If the glass is dirty, clean them with a dry soft cloth.	Refer to <b>Document Feeder Cleaning</b> (P.137).
7	Abnormal, wear and tear or loose parts	Replace the part. Check if the screws are tight on all parts.	-----

### 15.1.2.2. Maintenance Cycle

No.	Item	Cleaning Cycle	Replacement	
			Cycle	Procedure
1	Separation Roller (Ref. No. 110)	3 months	7 years* (31,500 documents)	Refer to <b>How to Remove the Gear Block and Separation Roller</b> (P.126)
2	Separation Rubber (Ref. No.23)	3 months	7 years (31,500 documents)	Refer to <b>How to Remove the Separation Holder and Document Feed Support</b> (P.121)
3	Feed Rollers (Ref. No. 30, 78)	3 months	7 years (31,500 documents)	Refer to <b>How to Remove the Image Sensor (CIS) and Feed Roller</b> (P.122).
4	Thermal Head (Ref. No. 58)	3 months	7 years (31,500 documents)	Refer to <b>How to Remove the Lock Lever and Thermal Head</b> (P.123).

\* These values are standard and may vary depending on usage conditions.

## 15.2. Gear Section

This section shows how the motor-driven gear mechanism works in the main operations: FAX transmission, FAX reception the motor and copying.

### 15.2.1. Mode Selection

When the motor attached to the Drive Motor Gear rotates counterclockwise (CCW), Swing Gear A engages the CAM and the CAM turns counterclockwise to select a mode. (See **Fig. A.**) There are three mode options controlled by the Switch: **A:** Transmit mode, **B:** Receive mode and **C:** Copy mode. In **Fig. B.**, you can see which mode is selected by the position of the rib in the CAM.

<Fig. A>

## 15.2.2. Mode Operation

Once a mode is selected, the Drive Motor Gear rotates clockwise (CW) and then the Swing Gear A-1 controls the mode operation.

### 15.2.2.1. TX Mode

Swing Gear A engages Gear TX and conveys its drive power to the Separation Roller Gear for pre-feeding documents.

Fig. B: TX mode

### 15.2.2.2. RX Mode

Swing Gear B engages Gear RX and conveys its drive power to the Platen Roller Gear for printing the received data.

Fig. C: RX mode

### 15.2.2.3. Copy Mode

Swing Gear A and B engage Gear TX and Gear RX respectively and drive both the Separation Roller Gear and the Platen Roller Gear for feeding documents and recording paper in the copying operation.

Fig. D: Copy mode

### 15.2.2.4. Reverse Mode

Swing gear D engages between swing gear B and gear RX, and conveys its drive power to the platen roller gear for reversing the recording paper.

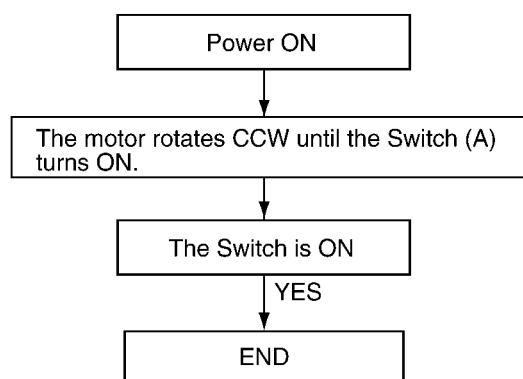

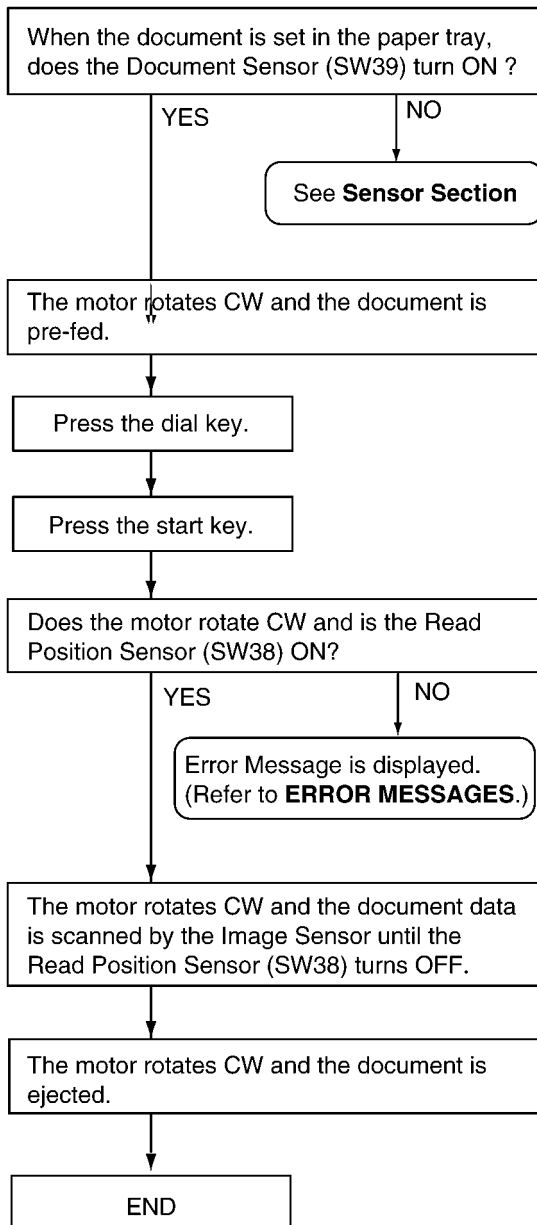

Fig. E: Reverse mode

## 15.3. Jams

### 15.3.1. Recording Paper Jams

1. Open the top cover by pressing the top cover release button (①).

2. Remove the recording paper.

3. Cut off the wrinkled portion.

4. Install the recording paper and close the top cover securely by pushing down on both sides.  
(See page **Installing the Recording Paper** (P.51))

### 15.3.2. Document Jams - Sending

1. Open the top cover by pressing the top cover release button (①) and remove the jammed document carefully (②).

2. Close the top cover securely by pushing down on both sides.

**Note:**

- Do not pull out the jammed paper forcibly before opening top cover.

## 15.4. Cleaning

### 15.4.1. Document Feeder Cleaning

Clean the document feeder when:

- Documents frequently misfeed.
- Smudges or black/white lines appear on the original document when sending or copying.

1. Disconnect the power cord and the telephone line cord.
2. Open the top cover by pressing the top cover release button (①).

3. Clean the document feeder rollers (①) and rubber flap (②) with a cloth moistened with isopropyl rubbing alcohol, and let all parts dry thoroughly. Clean the white plate (③) and scanner glass (④) with a soft and dry cloth.

**Caution:**

- Do not use paper products, such as paper towels or tissues.

4. Connect the power cord and the telephone line cord.
5. Close the top cover securely by pushing down on both sides.

### 15.4.2. Thermal Head Cleaning

If smudges or black/white lines appear on a copied/received document, check whether there is dust on the thermal head. Clean it to remove the dust.

1. Disconnect the power cord and the telephone line cord.
2. Open the top cover by pressing the top cover release button (①) and remove the recording paper.

3. Clean the thermal head (①) with a cloth moistened with isopropyl rubbing alcohol, and let all parts dry thoroughly.

**Caution:**

- To prevent a malfunction due to static electricity, do not use a dry cloth and do not touch the thermal head directly.

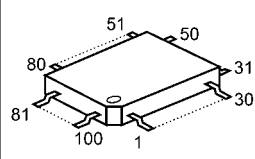

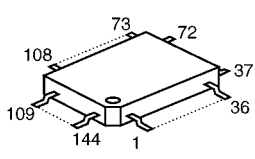

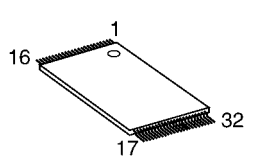

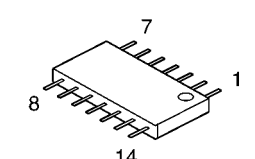

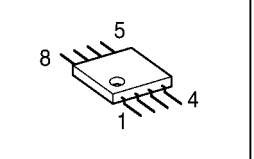

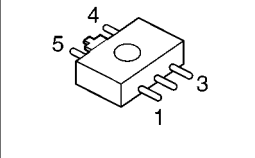

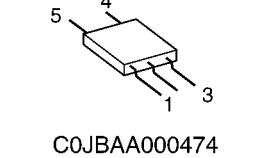

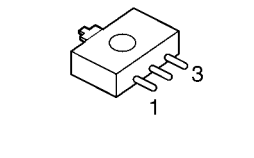

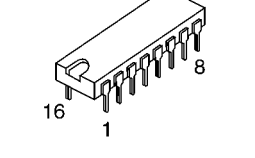

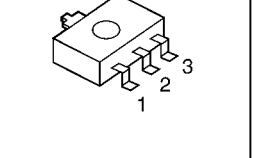

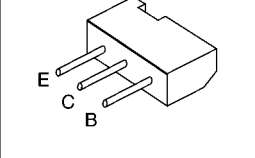

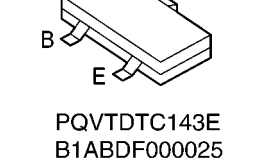

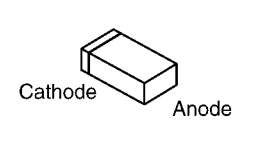

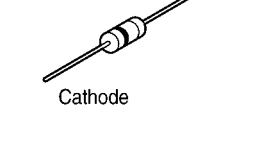

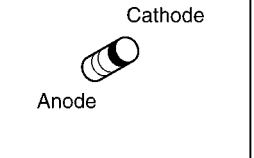

4. Connect the power cord and the telephone line cord.
5. Install the recording paper and close the top cover securely by pushing down on both sides.

## 16.2. How to Replace the Flat Package IC

Even if you do not have the special tools (for example, a spot heater) to remove the Flat IC, with some solder (large amount), a soldering iron and a cutter knife, you can easily remove the ICs that have more than 100 pins.

### 16.2.1. Preparation

- PbF (: Pb free) Solder

- Soldering Iron

Tip Temperature of  $700^{\circ}\text{F} \pm 20^{\circ}\text{F}$  ( $370^{\circ}\text{C} \pm 10^{\circ}\text{C}$ )

**Note:** We recommend a 30 to 40 Watt soldering iron. An expert may be able to use a 60 to 80 Watt iron where someone with less experience could overheat and damage the PCB foil.

- Flux

Recommended Flux: Specific Gravity  $\rightarrow 0.82$ .

Type  $\rightarrow$  RMA (lower residue, non-cleaning type)

**Note:** See **About Lead Free Solder (PbF: Pb free)** (P.7).

### 16.2.2. Flat Package IC Removal Procedure

1. Put plenty of solder on the IC pins so that the pins can be completely covered.

**Note:**

If the IC pins are not soldered enough, you may give pressure to the P.C. board when cutting the pins with a cutter.

2. Make a few cuts into the joint (between the IC and its pins) first and then cut off the pins thoroughly.

3. While the solder melts, remove it together with the IC pins.

When you attach a new IC to the board, remove all solder left on the land with some tools like a soldering wire. If some solder is left at the joint on the board, the new IC will not be attached properly.

### 16.2.3. Flat Package IC Installation Procedure

1. Temporarily fix the FLAT PACKAGE IC, soldering the two marked pins.

● - - - - - Temporary soldering point.

\*Check the accuracy of the IC setting with the corresponding soldering foil.

2. Apply flux to all pins of the FLAT PACKAGE IC.

3. Solder the pins, sliding the soldering iron in the direction of the arrow.

#### 16.2.4. Bridge Modification Procedure

1. Lightly resolder the bridged portion.
2. Remove the remaining solder along the pins using a soldering iron as shown in the figure below.

## 16.3. Test Chart

## THE SLEREXE COMPANY LIMITED

SAPORS LANE - BOOLE - DORSET - BH 25 8 ER

TELEPHONE BOOLE (945 13) 51617 - TELEX 123456

Our Ref. 350/PJC/EAC

18th January, 1972.

Dr. P.N. Cundall,  
Mining Surveys Ltd.,  
Holroyd Road,  
Reading,  
Berks.

Dear Pete,

Permit me to introduce you to the facility of facsimile transmission.

In facsimile a photocell is caused to perform a raster scan over the subject copy. The variations of print density on the document cause the photocell to generate an analogous electrical video signal. This signal is used to modulate a carrier, which is transmitted to a remote destination over a radio or cable communications link.

At the remote terminal, demodulation reconstructs the video signal, which is used to modulate the density of print produced by a printing device. This device is scanning in a raster scan synchronised with that at the transmitting terminal. As a result, a facsimile copy of the subject document is produced.

Probably you have uses for this facility in your organisation.

Yours sincerely,

*Phil.*

P.J. CROSS  
Group Leader - Facsimile Research

## 20.1.6. Accessories and Packing Materials

## 20.2. Replacement Parts List

Notes:

1. The marking (RTL) indicates that the Retention Time is limited for this item.

After the discontinuation of this assembly in production, the item will continue to be available for a specific period of time. The retention period of availability is dependent on the type of assembly, and in accordance with the laws governing parts and product retention.

After the end of this period, the assembly will no longer be available.

2. Important safety notice

Components identified by  $\triangle$  mark have special characteristics important for safety. When replacing any of these components, use only manufacture's specified parts.

3. The S mark means the part is one of some identical parts. For that reason, it may be different from the installed part.

4. RESISTORS & CAPACITORS

Unless otherwise specified;

All resistors are in ohms ( $\Omega$ ) K=1000 $\Omega$ , M=1000k $\Omega$

All capacitors are in MICRO FARADS ( $\mu$ F) P= $\mu$ F

## 20.8. Fixtures and Tools

Ref. No.	Part No.	Part Name & Description	Remarks
EC1	PQZZ9K7Z	EXTENSION CORD, 9 PIN	
EC2	PQZZ7K11Z	EXTENSION CORD, 7 PIN	
EC3	PFZZ11K13Z	EXTENSION CORD, 11 PIN	
EC4	PFZZ5K13Z	EXTENSION CORD, 5 PIN	
EC5	PQZZ10K8Z	EXTENSION CORD, 10 PIN	
EC6	PFZZ16K5Z	EXTENSION CORD, 16 PIN	
EC7	PQZZ2K12Z	EXTENSION CORD, 2 PIN	
EC8	PQZZ2K12Z	EXTENSION CORD, 2 PIN	
	KM79811245C0	BASIC FACSIMILE TECHNIQUE (for training service technicians)	

### Note:

Tools and Extension Cords are useful for servicing.  
(They make servicing easy.)
